## PREFACE.

THE object of this work is threefold :—first, to give a complete list of all the species of Hymenoptera hitherto described, with references to the literature, so as to serve as a guide and aid in improving the collection in the British Museum, which in some respects is very incomplete; secondly, to enumerate the specimens at present contained in that collection; and, thirdly, to illustrate the most important of them, viz. the types of specific descriptions, many of which are now published for the first time.

Mr. W. F. Kirby, one of the Assistants of this Department, has prepared this first volume, and has made considerable progress with the manuscript of the second.

ALBERT GÜNTHER,

*Keeper of the Department of Zoology.*

British Museum,  
July 1. 1882

## INTRODUCTION.

In the present volume upwards of 2000 species of the family *Tenthredinidae* are enumerated, and of the family *Siricidae* nearly 100.

These insects have been much neglected by entomologists: in Europe only and, to some extent, in North America have they been assiduously collected, whilst our knowledge of the exotic forms is very imperfect. No attempt therefore has been made to alter materially the classification and arrangement of the genera generally adopted, viz. that proposed by Norton in his Monograph of the North-American *Tenthredinidae* and *Uroceridae* (*Siricidae*), in the 'Transactions of the American Entomological Society,' vols. i. & ii.

Parthenogenesis is very common in the *Tenthredinidae*, and the females are generally far more abundant than the males: hence in many species one sex only is known. The sexes do not usually differ very much in coloration: those of *Diabocerus ellisii* and *Plenus serratus* are among the most dissimilar with which I am acquainted.

The species do not appear to vary greatly. On the other hand, the same distribution of colour and pattern not unfrequently reappears in widely separated species, so that two specimens may appear identical at first sight, whereas a closer inspection reveals structural differences in their antennæ and neurulation, which prove them to belong to widely separated genera, or perhaps even to distinct subfamilies.

The most extensive genus, and one of the most difficult of the *Tenthredinidæ* is *Nematus*, of which 373 species, mostly European, are here enumerated. Many of these, however, will probably prove to be identical when the synonymy of the genus is cleared up, a large number having been established by Hartig and Förster on slight or insufficient characters. It should also be noticed that in taking up Klug's species of other groups, Hartig has frequently copied the diagnoses only, even when, apart from Klug's descriptions, the diagnoses are wholly insufficient for their determination. This has sometimes led later writers to regard Klug's species of *Allantus* &c. as uncertain, where, in fact, no ambiguity exists.

As the present is the first general Catalogue of *Tenthredinidæ* and *Siricidæ* which has appeared, it is possible that a few species described by old authors may have been overlooked. It is believed, however, that such omissions are not numerous.

Lastly, I have to thank Mr. P. Cameron, of Glasgow, for his kindness in forwarding types of several of his new species of the genus *Tenthredopsis* for examination.

W. F. KIRBY.

British Museum.  
June 1882.

## INSECTS.

### HYMENOPTERA TEREBRANTIA.

#### Family I. TENTHREDINIDÆ.

##### Subfamily I. CIMBICINÆ.

###### § I. CIMBEX.

- Cimbex*, *Gröf. Hist. Ins. B.*, p. 291 (1792); *Fischer, L. et. Par.*, ii, p. 301 (1789), var. *Fischer* (1770)\*.  
*Cimbex*, *J. B. G. Trav. Méth. Ins.*, v, p. 22 (1789).  
*Cimbex*, *Gröf.*, p. 304 (1792).  
*Leach, Insect. Linn. Soc. Lond.*, p. 275 (1798); *Jur.* (re. tr.) *Hym.*, p. 46 (1837).

###### § II. *Cimbex femorata*.

1. *Tenthredin femorata*, *Linn. Syst. Nat.*, i, p. 557, n. 1 (1758); *Pers. Syn.*, p. 678 (1761).  
2. *Cimbex femorata*, *Fischer, Tenth. L.*, ii (v), p. 61, pl. in. (1770).  
3. *Tenthredin femorata*, *De Geer, Méth. Ins.*, ii, p. 2, p. 91 (1771); *De Geer, Ess.*, ii (1771), xiv, p. 170.  
4. *Cimbex femorata*, *Fischer, Trans. Linn. Soc.*, 41 (177), p. 36 (1809).  
5. *Cimbex femorata*, *Fischer, L. et. Par.*, ii, p. 302 (1789).  
6. *Cimbex femorata*, *Fischer, L.*, p. 1785.  
7. *Cimbex femorata*, *Leach, Zool. Misc.*, ii, p. 101 (1817).

\* The species of *Cimbex* of this genus would disturb the existing nomenclature of the *Cimbex* genus, and I have therefore decided to retain *Cimbex* through the above names has priority.

- ♀. *Cimbex griffinii*, *Leach, l. c.* p. 107 (1817).  
 ♀. *Cimbex schæfferi*, *St.-Farg. Mon. Tenth.* p. 21 (1823); *Faun. Franç., Hym.* p. 3, pl. i. fig. 1.  
 ♂ ♀. *Cimbex variabilis* (p.), *Klug, Verh. nat. Ges. naturf. Fr. Berl.* i. p. 72 (1829).  
 ♂. *Tenthredo humboldtii*, *Ratz. Forst. Ins.* iii. p. 135 (1844).  
 ♂ ♀. *Cimbex violascens*, *Thoms. Hym. Scand.* i. p. 20 (1871).  
 ♂ ♀. *Cimbex brevispina*, *Thoms. l. c.* p. 21 (1871).

*Hab.* Europe.

a-d. ♂ ♀.	Britain.	J. F. Stephens.
e, f. ♂ ♀.	Britain.	
g. ♂. (Type of <i>C. europæa</i> .)	Dartford.	W. E. Leach.
h, i. ♂ ♀.	Devonshire.	W. E. Leach.
k. ♀.	Windsor.	
l. ♀. (Type of <i>C. griffinii</i> .)	Norwich.	W. E. Leach.
m. ♀.	Germany.	Herr J. F. Ruthe.
n, o. ♂.	Bohemia.	Prof. N. M. Kheil.
p, q. ♀.	Europe.	

2. *Cimbex maculata*.

- ♀. *Crabro maculatus*, *Fower. Ent. Par.* ii. p. 362 (1785).  
 ♀. *Cimbex pallida*, *Steph. Ill. Brit. Ent., Mand.* vii. p. 7 (1835).

*Hab.* England, France.

a. ♀. (Type of <i>C. pallida</i> .)	Colney Hatch.	J. F. Stephens.
b, c. ♂ ♀.	Europe.	

3. *Cimbex lutea*.

- ♀. *Tenthredo lutea*, *Lin. Syst. Nat.* i. p. 655, n. 2 (1758); *Faun. Suec.* p. 388 (1761).  
 ♂ ♀. *Cimbex lutea*, *Thoms. Hym. Scand.* i. p. 19 (1871).  
 ♀. *Tenthredo tristis*, *Fabr. Her. Norw.* p. 334 (1779).  
 ♀. *Tenthredo sylvarum*, *Fabr. Ent. Syst.* ii. p. 105, n. 4 (1793); *Panz. Faun. Germ.* Heft 88, pl. xvi. (1805).  
 ♂ ♀. *Cimbex sylvarum*, *Vollenh. Tijdschr. Ent.* xviii. p. 33, pl. iii. (1875).  
 ♂. *Tenthredo femorata*, *Panz. l. c.* Heft 26, pl. xx. (1796).  
 ♀. *Cimbex varians*, *Leach. Zool. Misc.* iii. p. 105 (1817).  
 ♀. *Cimbex luteola*, *St.-Farg. Mon. Tenth.* p. 28 (1823).  
 ♀. *Cimbex palleus*, *St.-Farg. l. c.* (1823); *Faun. Franç., Hym.* p. 5, pl. i. fig. 3.  
 ♀. *Cimbex biguetina*, *St.-Farg. Ann. Soc. Ent. Fr.* ii. p. 455 (1833).  
 ♂ ♀. *Cimbex saliceti*, *Zadd. Schrift. Königsb.* iii. p. 251, pl. ii. fig. 3 (1863).  
 ♂ ♀. *Cimbex betulæ*, *Zadd. l. c.* pp. 233, 249 (1863).  
 ♂ ♀. *Cimbex fagi*, *Zadd. l. c.* pp. 233, 251 (1863).

*Hab.* Europe; Siberia.

a-l. ♂ ♀.	Britain.	J. F. Stephens.
m-p. ♂ ♀.	Britain.	

g. ♂.	Norwood.	W. S. Kent, Esq.

*Hab.* S. E. Europe\*.

\* *Cimbex scapularis*, *Oxytelus*, *Moll.*, v. p. 772 (1790), does not belong to the *T. T. connata*, but a coming to St. Ives, I am, is *C. connata* or *f. varians*, Latr.

7. *Cimbex ariana*.

(Plate I. fig. 3.)

Exp. al. 1 poll. 2 lin., long. corp. 8 lin.

*Female*. Black; antennæ, jaws, tibiæ, and tarsi yellow. Abdomen yellow, front margin of all the segments, except the two last, black, more broadly in the middle than at the sides; under surface of abdomen yellowish. Wings vitreous; fore wings with the costal half clouded with deep yellow.

Nearest to *C. axillarıs*, from which the black head and scapulæ will at once separate it, independently of other differences; but much more slender than any described species of the genus.

*Hab.* North India.

a. ♀. (Type of species.)                      North India.                      Capt. Laing.

8. *Cimbex sibirica*.

(Plate I. fig. 1.)

Exp. al. 2 poll., long. corp. 10 lin.

*Female*. Allied to *C. violacea*, but with the abdomen rather shorter and broader. Black; head and thorax with short bristly hairs. Antennæ castaneous, with the basal joint reddish brown; jaws reddish; scapulæ black, slightly edged with tawny, or wholly tawny; in the latter case there is a tawny spot on the back of the head on each side, behind the eyes. Thorax sometimes edged behind with tawny; metathorax always with a small yellow depression on each side. Segments 3 to 6 or 7 banded with tawny, which is frequently more or less interrupted in the middle; under surface black. Legs tawny; femora black; tibiæ darker than the tarsi. Middle and sides of abdomen sometimes marked with yellowish; the extremity always black beneath, whereas it is nearly always yellow in *C. violacea*. Wings yellowish hyaline, with yellowish or fuscous nervures; extremities dusky; costa yellow; stigma dusky, with a large oblique dusky shade below it, as in *C. violacea*.

This species more resembles Panzer's figure of *C. sylvarum*, which is a variety of the female of *C. lutea*, than any *Cimbex* at present in the collection of the British Museum.

*Hab.* Siberia.

a. ♀. (Type of species.)                      Angara.                      Purchased.  
b, c. ♀.                      Trans-Baikal.                      Purchased.

16. *Cimbex violacea*.

*Cimbex violacea*, *St.-Farg. Mon. Tenth.* p. 27, no. 76 (1823).

♀. *Cimbex americana*, var. *decemmaculata*, *Nort. Trans. Amer. Ent. Soc.* i. p. 42 (1867).

Exp. al. 1 poll. 5 lin. ad 2 poll. 2 lin., long. corp. 7 lin. ad 1 poll.

*Male.* Upper surface of head, thorax, and legs dark brown; less densely hairy and hind femora less swollen than in *C. americana*. Cheeks more or less rufous. Abdomen wholly rufous, and under surface of legs spotted with rufous; antennæ and tarsi luteous. In the darker specimens the legs are wholly reddish brown beneath, and the abdomen is purplish above at the base. Wings as in *C. americana*.

\* This species will probably prove to be a North-American insect, and is perhaps a variety of *C. ulmi*. Many writers regard all the North-American *Cimbices* as varieties of one species.

† Probably a variety of the female of *C. violacea*.

*Female.* Pitchy brown; scutellum rufous; collar, the hinder part of the head, two depressions on the vertex within the eyes, and the jaws and lower edge of the clypeus rufous; antennæ and tarsi luteous. Abdomen with a yellow membrane at base, as in the male; basal segment violet-brown, the colour extending in a wedge backwards over more or less of the following segments; if it only covers the first three or four, it is followed by a series of triangular spots in the middle of the following segments; in one case the purple colour extends over the whole abdomen, leaving only a series of five lateral yellow spots, as in typical *ulmi*. Abdomen beneath brown, the apical third deeper yellow than above. Femora violaceous; tibiæ testaceous, sometimes brownish. Wings as in *C. americana*.

Klug regards this species as identical with his *C. luctifera*, with which I am unacquainted. As we possess a long series, and the male appears to be undescribed, I have thought it better to describe both sexes in full. St.-Fargeau was unacquainted with the locality of his specimen.

Two of the largest males from Hudson's Bay have the club of the antenna much more constricted in the middle than the others; but I am unwilling to describe them as distinct at present.

*Hab.* North America.

*Hab.* California, Nevada.

21. *Cimbex hudsonica*.

(Plate I. fig. 4.)

Exp. al. 1 poll. 3 lin., long. corp. 7 lin.

Head and thorax black above and below; prothorax very pale yellow; coxæ bluish black; jaws and femora reddish brown. Antennæ, tibiæ, and tarsi luteous. Abdomen with the first two segments black above, the second edged behind with chestnut; the succeeding segments chestnut in the middle; the last two and the under surface almost entirely chestnut. Segments 3 to 6 with a black spot on the edge of the chestnut colouring, expanded on segments 4 and 5 into two long triangles, which almost meet on the back; the sides of these four segments are straw-coloured. Wings as in *C. violacea*, hyaline, yellowish towards the base, and dusky at the tips; the oblique shade running from the stigma across the median cell of the fore wings unusually well defined.

Not unlike a *Trichiosoma* in size and general appearance, though it has the antennæ of *Cimbex*.

*Hab.* Hudson's Bay.

#### 5. *Trichiosoma arcticum.*

(Plate I. fig. 7.)

? *Trichiosoma lucorum*, *Kirb. Faun. Bor.-Amer., Ins.* iv. p. 255 (1837).

Exp. al. 1 poll. 3 lin., long. corp. 8 lin.

Allied to *T. lucorum*; differs from *T. triangulum* in the shorter, broader, and more obtuse abdomen. Black, with a slight purplish tinge; head, thorax, base of abdomen, and femora clothed with long grey hairs; abdomen above with a short erect grey pile. Antennæ wanting; mandibles and last segment of the abdomen beneath reddish; femora and extreme base of the tibiae blue-black; tibiae and tarsi rufo-testaceous. Wings rather short, smoky yellow; the tip of the fore wings very slightly clouded, nervures yellowish or mahogany-brown.

*Hab.* Arctic America.

<i>a.</i> ♂. (Type of species.)	Fort Simpson, Mackenzie River, 62° N. lat.	Sir J. Richardson.
---------------------------------	--------------------------------------------	--------------------

6. *Trichiosoma triangulum*.

 (1837).

*Hab.*, California.

8. *Trichiosoma crassum*.

(Plate I, fig. 5.)

Exp. al. Copul. 7 lin. Ingr. Corp. 9 lin.

Probably allied to *T. lanuginosum*; body shorter and thicker than in *T. lanuginosum*, &c.; head brown, club of the antenna abruptly pear-shaped. Body, particularly scutellum, and base of abdomen densely clothed with yellowish-grey hairs, which are particularly thick on the sides of the prothorax. Head and thorax extremely punctured; club of hairy tergite 1. Under-surface with scattered hairs. Abdomen mostly bare above, except at base, extremely and edges of the segments ratios beneath. Tergum black; tibia and tarsi testaceous. Wings rather long and narrow, yellowish hyaline, smoky yellow along the costal hind margin—veins more clouded than the rest of the wings.

*Hab.*, Newfoundland.

## 5. ZARÆA.

Zaræa, *Leach, Zool. Misc.* iii. p. 113 (1817).

\* As the description of this genus and species has been published in a very irregular manner, I reproduce it here.

“Antennes claviformes, de 7 articles, dont deux pour la massue qui est allongée. Ailes antérieures avec 2 cellules radiales et 3 cubitales, dont la première reçoit la première nervure récurrente; la deuxième nervure récurrente fait le prolongement de la deuxième nervure transverso-cubitale. Cellule lancéolée contractée au milieu. Hanches presque contigues. Ongles simples. Jonction des premier et deuxième segments abdominaux sans fente élargie, nue, membraneuse.

“*P. taczanowskii*, Wank. sp. n. Noire, opaque, très-finement chagrinée. Tête et thorax à pubescence laineuse, blanchâtre; celui-ci à ponctuation fine, peu dense; bord des segments abdominaux à bandes régulières blanc-jaunâtre, excepté au deuxième où elles sont réduites à une tache latérale; ailes jaunâtres. Pattes jaune ferrugineux avec les hanches, les cuisses antérieures, sauf les genoux, et deux bandes longitudinales aux cuisses intermédiaires noires. Dernier segment ventral ♀ largement et anguleusement élargi, avec une profonde fossette triangulaire au milieu. Long. 16 mm.; env. 35 mm.

“Une seule ♀ prise aux environs de Minsk en Lithuanie. Dédiée à M. le directeur du musée de Varsovie, M. Ladislas Taczanowski. Ce genre est voisin des *Trichosoma* et des *Clavellaria*.”

--------------	-----------------	-----------------------

7. *Amasis subflavata*.

(Plate I, fig. 9.)

Exp. al. 8 lin., long. corp. 5 lin.

Steel-blue; scapulae and two first abdominal incisions above, sides and undersurface of the abdomen, except at the tip, orange-yellow; coxae whitish yell w; pectus, tip of abdomen, and legs black or steel-blue. Wings smoky hyaline, with black costa, stigma, and nervures.

The facies of this species is that of *Hylotoma*, and the club of the antennae is more abrupt and less elongated than in the types of *Amasis*. The hind femora, too, are rather more swollen; but I am not prepared to found a new genus on a single specimen differing by such slight characters. It is probably allied to *A. dilatata*.

*Hab.* Argentine Republic.a. ♂. Cordoba8. *Amasis dilatata*.*Amasis dilatata*, *St-Farj. Enc. Meth.* x. p. 574 (1825).*Hab.* Brazil.

10. **PERGA.**

*Perga*, *Leach, Zool. Misc.* iii. p. 115 (1817); *Westw. P. Z. S.* 1880, p. 359.

The transformations of this genus fully entitle it to be regarded as a distinct subfamily; but for the present it is more convenient to leave all the *Tenthredinidæ* with clubbed antennæ in the same division. It agrees with several of the following genera, as well as with *Hylotoma*, in the presence of middle spurs on the tibiæ.

## Section i.

*Antennæ short, 6-jointed; joints 3-5 of equal length, not remarkably short.*

1. ***Perga dorsalis.***

(Plate I. figs. 11, 12, 12 a, 12 b.)

*Perga dorsalis*, *Leach, Zool. Misc.* iii. p. 117, n. 4, pl. exlviii. fig. 1 (1817); *Westw. P. Z. S.* 1880, p. 362.

♀. *Perga scutellata*, *Gray, Griff. An. Kingd.* xv. p. 402, pl. lxxi. fig. 2 (1832).

Exp. al. 1 poll. 7 lin., ad 1 poll. 11 lin., long. corp. 11-12 lin.

*Male*. Greyish blue above; abdomen bluer and more shining; clypeus, labrum, antennae, a small spot on each side of the back of the head, behind the eyes, scapulae, and almost the whole prothorax except just behind the head, a large triangular spot on each side of the pectus, a smaller one above the posterior coxae, scutellum, and legs rufo-testaceous, the former with very shallow punctures; middle of pectus and undersurface of abdomen shining violet-blue. Abdomen above with segments 2-5 at least covered with a silky pubescence in the middle; back of head and thorax moderately punctured, sides of pectus very coarsely so; scutellum smooth. Wings deep yellowish hyaline, with reddish costa, stigma, and nervures; costae of fore wings very strongly arched.

The *female* has the costae less strongly arched; the abdomen is longer, silky green above, and the segments are but slightly edged behind with silky pubescence. The legs, scutellum, &c. are generally paler than in the male, and the scutellum is more deeply pitted. The spot on the sides of the pectus is smaller; sometimes almost obliterated. In one specimen the hind femora are blackish at the extremities, brown ferruginous in the middle. The saws are reddish.

The details representing the head of the female are copied from Gen. Hardwick's unpublished drawings.

*Hab.* Australia: Merton Bay, &c.

<i>a.</i> ♀. (Type of species)	Australia.	W. E. Leach.
<i>b.</i> ♂.	Australia.	H. G. Harrington, Esq.
<i>c, d.</i> ♀♀.		

## 2. *Perga affinis*.

(Plate I. figs. 13 & 14.)

Exp. al. 1 p. 11, 5 lin., ad 1 poll. 11 lin., long. corp. 9-10 lin.

Head and thorax dull bluish or greenish above; clypeus, labrum, scapulae, coxae, scutellum, and on the whole of the sides of the pectus (except a long irregular bluish mark which runs from beneath the base of the fore wings towards the base of the intermediate pair of legs), pale yellow. Antennae ferruginous, pale yellow at the base. Cheeks more or less yellowish; thorax with a short yellowish stripe on each side in front. Legs ferruginous. Back of metathorax and of the first segment of the abdomen pale yellow; the second segment is narrowly edged with red in front, and this and the four following segments are covered with silky pubescence; the seventh and eighth segments are marked with three red bands, the first most distinct, but interrupted in the middle. On the underside, the middle of the pectus and abdomen are shining black, the abdomen, however, being mottled with rufo-testaceous, and the anal plate is of the same colour. Wings yellowish hyaline.

*Female* similar to the male, but the antennae and legs are yellowish

testaceous, like the other pale markings. The cheeks are concolorous, but there is a pale spot at the back of the head behind each eye; the pale spots on the thorax are less distinct; and the abdomen is silky green above, with no silky pubescence or red marks, though the first segment is yellowish behind. Undersurface of the abdomen pale, the segments edged with dusky in front. The Australian specimens may be distinct. In the male the grey pubescence of the abdomen is more distinct than in the Tasmanian insect, and the red markings towards the apex much less so. The yellow stripe at the base is entire as in *P. dorsalis*, and not interrupted as in Tasmanian examples. I have not seen a female from Tasmania.

<i>d.</i> ♀.	Swan River.	Dr. Richardson.

### 5. *Perga castanea*.

(Plate I. fig. 6.)

Exp. al. 1 poll. 9 lin., long. corp. 11 lin.

Dark reddish brown, almost mahogany-colour, with obscure darker markings on the back of the abdominal segments, having a tendency to form incomplete bands. Antennæ and legs straw-colour; scapulæ and mouth yellowish. Thorax thickly and closely punctured, ridged, with a deep median depression in front; sides of the mesothorax forming a raised ridge grooved in the middle. Underside paler red (chestnut), with a row of pale straw-coloured spots along each side of the abdomen. Wings vitreous, with chestnut nervures: fore wings with the costa strongly arched beyond the middle; costal cell and rather large stigma chestnut-coloured;

\* Prof. Westwood regards this species as synonymous with *P. dorsalis*; but it appears to me to represent a different species from any at present contained in the British Museum, but nearer to the following.

the whole apical half of the wing clouded with smoky yellow, darkest at the line of demarcation, which forms an ill-defined band: hind wings paler than the fore wings: apical half clouded with brown. The first transverse nervule on the fore wings is marked with a bulla, or is wholly obsolete; and one or two other nervures are also marked with bullae, which do not appear to be uniform. A second specimen is rather smaller and lighter coloured.

This species may be distinguished from *P. polita* by the different colouring of the wings and by the concolorous scutellum.

*Hab.* New South Wales.

### 6. *Perga kirbii*.

(Plate II. fig. 2.)

*Perga kirbii*, *Leach, Zool. Misc.* iii. p. 117, n. 5 (1816); *Westw. P. Z. S.* 1880, p. 371, pl. xxxvii. fig. 4.

Exp. al. 1 poll. 7 lin., long. corp. 11 lin.

Head and thorax dull castaneous: thorax with the frontal and lateral ridges slightly raised, but distinct and grooved, darker than the ground-colour; tip of jaws black. Abdomen reddish chestnut above, shining. Scutellum obscure testaceous, with a distinct longitudinal groove in the centre. The whole undersurface of the body testaceous. Wings hyaline; costa, stigma, and nervures yellowish.

Closely allied to *P. klugii*, but, independently of its different colouring, the grooved scutellum and clear hyaline wings will at once distinguish it, the scutellum in *P. klugii* having merely a shallow depression in the middle.

As the male only was previously known, I have described and figured the female. Leach's type is in the Hope Museum at Oxford.

*Hab.* Australia.

Exp. al. 1 poll. 3 lin. ad 1 poll. 8 lin., long. corp. 8-10 lin.

Head testaceous above; vertex reddish in the middle; antennæ, labrum, and clypeus yellow; jaws reddish, tipped with black. Thorax reddish brown; scapulæ, collar, a V-spot in the middle and on each side above, and the pleura and the sides of the pectus yellow. Scutellum smooth, yellow, bisected by a groove throughout its whole length. Abdomen shining chestnut, mottled with blackish

above; sometimes violet-brown in the female. Undersurface of abdomen and pectus in the middle shining chestnut; stigmata spotted with white or pale yellow; legs yellow; femora of the colour of the abdomen. Wings yellowish hyaline, generally less deeply coloured than in *P. dorsalis*; nervures chestnut; costa but little arched. Thorax finely punctuated above; sides of pectus much more coarsely punctuated.

Exp. al. 9 lins. long. corp. 5 lin.

Head and thorax blackish above; antennæ ferruginous, the two basal joints black; face, cheeks, two spots on the vertex, edges of

collar, and pleura dull whitish testaceous, the latter shading into the pale uniform rufo-testaceous of the undersurface. Scutellum pale testaceous, very large, with a carina in the middle, not extending to the edges. Abdomen above and legs rufo-testaceous; first two segments of the abdomen black at the base, the black on the second spreading into a black spot on each side. The four hind tarsi are blackish, except the last joint. Wings hyaline, perhaps yellowish when fresh; nervures piceous.

## Section ii.

*Antennæ 6-jointed; joints 3-5 so short that the club appears to spring almost immediately from the antennal tubercle. Abdomen rarely jointed, generally obtusely truncated at the extremity; hind femora more or less swollen.*

34. *Perga belinda*.

(Plate II. fig. 3.)

Exp. al. 1 poll. 1 lin., long. corp. 9 lin.

Has a close superficial resemblance to *P. lewisii*. Testaceous, shading more or less into yellowish on the middle of the mesothorax and on the scutellum; antennæ and an oval spot behind each eye blackish; lateral ridges of thorax reddish brown; abdomen rather pointed, shading into shining reddish chestnut towards the extremity, and with obsolete yellow spots on the sides. Undersurface yellowish testaceous, hind femora considerably dilated; hind femora, hind tarsi, and terminal half of hind tibiae reddish chestnut. Wings hyaline, costa and stigma reddish, nervures yellowish; first submarginal nervule nearly obsolete, giving it the appearance of having only three submarginal cells, of which the last is much larger than all the rest together, and bounded towards the base by an angulated nervule.

Swan River.

Mr. Du Boulay.

37. *Perga dubia*.

(Plate II. fig. 9.)

Exp. al. 9-10 lin., long. corp. 6 lin.

Head black above; cheeks, two spots on the vertex and two at the base of the antennæ testaceous, face and antennæ rather darker. Thorax black above, the usual elevations grooved; a central spot, the sides of the thorax, and the scapula and scutellum testaceous; pectus deep black; the prothorax and two large spots under the wings testaceous; legs rather darker. Abdomen testaceous: first segment

black, second testaceous, bordered behind with black. Undersurface rather darker. Wings hyaline, with a slight yellowish tinge; costa, stigma, and nervures yellowish brown; costa very strongly arched, as in most species of this section, the first three submarginal cells are small, and the last very large.

### Section iii.

*Antennæ 7-jointed, with a gradually-formed club.*

### 40. *Perga amenaida*.

(Plate 11. fig. 10.)

Exp. al. 9 lin., long. corp. 5 lin.

Head and thorax black above, sparingly punctured; face, cheeks, two spots on the vertex, two at the base of the antennæ, and two between these and the eyes yellowish; mandibles tipped with black; antennæ reddish. Thorax with a slight depression on each side and a groove in front, between a yellowish V-spot; the back of the scapule, the sides of the thorax, and the scutellum are also yellow. Legs and the centre of the pectus testaceous; the rest of the undersurface of the body whitish. Abdomen steel-blue, with a slight greenish shade. Scutellum deeply cleft, and almost divided in two; hind femora dilated. Wings hyaline, with yellow nervures and costa; the costal half of the fore wings yellowish.

*Hab.* South Australia.

43. *Perga dentata*.

(Figs. 11, fig. 13.)

*Exp.* ♂. 1 poll. 3400, 1 ant. corp. 8 lin.

Head dull yellow; antenae black, except the basal joint; vertex mostly black, but anteriorly yellow. A median black line, with a longitudinal depression on each side, runs to the occiput, and other black lines run behind the eyes. Thorax dull black, coarsely punctured, the front ridge with a central depression, but the lateral ridge a not grooved, anterior and hinder part of the thorax bordered with yellow; scutellum yellow, indented both before and behind. Abdomen shining yellow black. All the upper surface of the body yellow, except the posterior and the central part of the abdomen; on the sides of the thorax two spots projects into the yellow at the former part of each segment, giving the markings a saw-like appearance. Legs yellowish yellow, with the costal cell, stigma, and tarsus brown a broad orange vitaceous, slightly shaded towards the extremity.

44. *Perga rufomaculata*.

(Figs. 11, fig. 12.)

*Exp.* ♂. 1 poll. 1 ant. corp. 7 lin.

Affined to *P. mayrii*. Antennae above, head and thorax much less thickly punctured with shallow depressions. Head with the cheeks two large spots on the vertex, two on which the antennae are placed and one on each eye, and the face and undersurface yellowish or reddish, anterior reddish, club darker. Thorax with the scutellum, sides, and scutellum red. The front ridge of the thorax edged behind with a red and V, the ends of which extend to the scutellum, and there are also the smaller red spots in front of the scutellum. Postae, legs, red sides and undersurface of abdomen red. Wings vitaceous, smoky yellow towards the extremities, reddish towards the base on inner margin, nervures, costa, and stigma blackish, and stigma edged with reddish.

*H. b.* South Australia.

*a.* ♀. (Type of species.)

Australia.

Purchased.

45. *Perga jucunda*.

(Plate II. fig. 14.)

Exp. al. 1 poll. 1 lin., long. corp. 6 lin.

Bluish black, shading into dark shining violet on the back of the abdomen; antennæ broken, three first joints blue-black. Thorax with rounded and grooved elevations in front and at the sides, the groove in the front rather shallow. Vertex excavated in front and at the sides; cheeks, scutellum (which is grooved in the centre, and throws off a small projection at each hinder angle), a long spot on the sides of the pectus below the first pair of wings, and the sides of the abdomen orange. Wings smoky, the hind wings lighter: fore wings with brown nervures; costa and stigma brown, but the latter filled up with yellow on the costa. Bullæ very large and distinct; transverse cubital nervures interrupted on both pairs of wings.

Resembles *P. dentata*, but very distinct. Indicated by the late Mr. F. Smith as the type of a new genus.

*Hab.* West Australia.

Perth.

Purchased.

46. *Perga leachii*.

(Plate II. fig. 11.)

*Perga leachii*, *Westw. P. Z. S.* 1880, p. 377.

Exp. al. 11 lin., long. corp. 6 lin.

Head yellow, vertex (except the usual two spots) and tips of the jaws black, ocelli yellow; antennæ yellow, comparatively long and slender, club very gradually formed. Thorax dull reddish brown; frontal ridge triangular, black, and deeply grooved; back of thorax blackish. Abdomen dark reddish brown above, polished, and varied with darker. Undersurface of the body and legs wholly testaceous, except that there are two broad black stripes on each side of the pectus. Fore wings yellowish hyaline, with yellow costa, stigma, and nervures; hind wings hyaline.

This species stood in the British-Museum collection as *P. kirbyi*, a very different insect.

## 11. CEREALCES.

Antennæ 10-jointed, bare, widened at the extremities of the joints, and thickest in the middle, nearly as long as the head and thorax; thorax not ridged; scutellum large, with a deep longitudinal depres-

sion; abdomen much narrower than the thorax, about as long as the head and thorax together, and rounded off at the extremity.

Fore wings with one marginal, appendiculate cell, and four submarginal cells, gradually increasing in size, the second and third each receiving a recurrent nervure; no lanceolate cell: hind wings with one middle cell.

Tibiæ with two end spurs of moderate length, and the four hind tibiæ with middle spurs. Hind coxæ rather large; hind femora swollen and rather flattened.

Very distinct from *Perqa*, with which, however, it agrees in nervation and in the structure of the legs.

### 1. *Cerealces scutellata*.

(Plate II. fig. 15.)

Exp. al. 7 lin., long. corp. 4 lin.

Black; head, thorax, and pectus thickly punctured; antennæ, jaws, and scutellum reddish, the cleft in the last black; labrum, cheeks, scapulæ, second and two last segments of the abdomen yellowish above, the intermediate segments shading into reddish in the middle, the segments slightly edged with yellowish below. Legs rufous; intermediate and hind coxæ pale yellowish, the latter black at base.

*Hab.* South Australia.

## 16. INCALIA.

*Incalia*, *Cameron, Trans. Ent. Soc.* 1878, p. 143.

Antennæ short, 7-jointed, moderately thick, clothed with short hair; second joint a little shorter than the first, the third longer than the two first together: the remainder of about equal length; last joint conical. Abdomen rather short and thick: hind tibiæ with a spur in the middle. Fore wings with one marginal appendiculate cell and four submarginal cells; dividing nervules bullated: hind wings with one middle cell.

1. *Incalia hirticornis*.

(Plate II. fig. 16.)

*Incalia hirticornis*, *Cameron, Trans. Ent. Soc.* 1878, p. 144.

Exp. al. 13 lin., long. corp. 6 lin.

Head below the antennæ, basal joint of the latter, thorax, first pair of legs, middle coxæ and femora, and hind coxæ luteous: antennæ, abdomen, and legs otherwise blue-black; head above antennæ, and cheeks greenish blue: ocelli pale luteous; wings deep purplish, rather clearer towards the tips.

*Hab.* Amazons.

a. ♀.

Amazons.

H. W. Bates, Esq.

## 17. PARALYPIA.

Antennæ short, 8-jointed, thickened beyond the middle, third joint longest; head, thorax, and abdomen shaped nearly as in *Selandria*; legs unarmed, moderately long and thick. Wings with one marginal (appendiculate) and four submarginal cells, the second receiving the first transverse nerve in the middle, and the second nervure received at the juncture of the second and third cells; no second anal vein or lacinate cell; hind wings with one middle cell.

A genus of doubtful position, perhaps allied to *Cephalocera*, but with some resemblance to *Perryia*.

1. *Paralypia picipes*.

(Plate II, fig. 17.)

Exp. al. 5 lin., long, corp. 2½ lin.

Black; thorax testaceous, with a black spot in front, and the scutellum black; postus paler, black in the middle; first segment of abdomen blackened behind with white above; legs piecous. Wings hyaline; fore wings smoky at base and tip.

*Hab.* Amaraté.

## 21. TRICHORHACHUS.

Intermediate between *Schizocerus* and *Hylotoma*.

Head moderately large; antennæ with the first two joints very short; the third long and bifurcated in the male, the branches appearing almost to spring from the head, in consequence of the shortness of the basal joints. The branches are clothed with long cilia on the outside; the inner branch is straight, and the outer one curves round so as almost to meet it at the tip. Antennæ in the female simple and very short. Wings with one marginal appendiculate cell and three submarginal cells; the stigma is very large, and the nervure beneath it is curved in such a manner that both the marginal cell and the first submarginal cell are narrowed and contracted at their base; lanceolate cell small, petiolated. Legs not dilated; four hind tibiæ with middle spurs.

1. *Trichorhachus australis*.

*Hylotoma* (*Schizocera*) *australis*, *Westw. Arc. Ent.* i. pl. vii. fig. 2 (1841).

*Hab.* West Australia.

2. *Trichorhachus sobrinus*.

(Plate III, fig. 3.)

Exp. al. 6 lin., long. corp. 3 lin.

Shining bluish green; cheeks, antennæ, head below the antennæ, and the extremity of the abdomen beneath testaceous; front tibiæ and tarsi testaceous, the four hinder ones brownish above and pale beneath. Wings hyaline at the base, and infuscated beyond the middle.

*Hab.* Australia?

*a.* ♂. (Type of species.) Australia?

3. *Trichorhachus hyalinus*.

(Plate III, fig. 4.)

Precisely similar to *T. sobrinus*, but the front tibiæ and tarsi are brown and the four hinder ones blue, and the wings are hyaline and iridescent.

*Hab.* West Australia.

*a.* ♂. (Type of species.) Swan River. Mr. Du Boulay.

4. *Trichorhachus nitidus*.

(Plate III, figs. 1 & 2.)

Exp. al. 5 lin., long. corp. 2½ lin.

Head and thorax coppery green; abdomen blue, greenish beneath;

cheeks, antennæ, tibiæ, tarsi, and extreme apex of the abdomen luteous. Wings clear hyaline, iridescent; stigma brown.

*Hab.* West Australia.

*a, b.* ♂ ♀. (Types of species.) Swan River. Mr. Du Boulay.

### 5. *Trichorhachus abdominalis*.

(Plate III. fig. 5.)

*Exp. al.* 6 lin., *long. corp.* 3 lin.

Shining black, basal two thirds of the abdomen beneath reddish brown; tibiæ and tarsi testaceous, face yellowish; hind tibiæ black at the extremity, and hind tarsi ringed with black. Wings clear hyaline, iridescent, with black nervures and stigma.

*Hab.* West Australia.

*a.* ♂. (Type of species.) Swan River. Mr. Du Boulay.

*Hab.* Amazons.

a-d. ♂ ♀.                                 Amazons.                                 H. W. Bates, Esq.

3. *Scobina bicolor*.

(Plate III. fig. 6.)

Exp. al. 7 lin., long. corp. 3 lin.

Head, antenna, scutellum, pectus, abdomen, and legs black; thorax and scapula luteous. Fore wings smoky hyaline, darker at the base; hind wings hyaline, clouded at base. The fore wings have a black spot near the extremity of the first median cell, and another in the second cubital cell; the nervule which divides the first and second cubital cells is incomplete.

Mr. Cameron has indicated this species to me as his *Diacherra* (?) *crassicoenis*: but the neururation does not agree with his description.

*Hab.* Amazons.

*Hab.* Brazil.

9. *Gymnia inconspicua*.

(Plate III, figs. 9 & 10.)

Exp. al.  $5\frac{1}{2}$  lin., long. corp. 3 lin.

Black: scapulae testaceous, front of pectus, first pair of legs, and knees paler. Wings clear hyaline towards the base, with black stigma and nervures: the apical third is dusky as far as the discoidal nervure of the hind wings. Male with bifurcate, curled, and strongly ciliated antennæ, and a dusky band filling up the centre of the fore wings, leaving the base, below the costal cell, and the apex of the wing hyaline. Hind wings with the outer half dusky as far as the discoidal nervure. Basal half of the hind tibiae testaceous in the male.

*Hab.* Atlantic.

♂. ♀. *Common*. H. W. Bates, Esq.  
*L.* *Common*.

\* On examination of the type, I discovered, in the female, three black in-  
 distinct, longitudinal lines, on the sides of the thorax, and one on the abdomen.  
 These I have supposed to be the result of the presence of the black on the thorax above,  
 and the black on the abdomen.

† In some specimens the extreme apices of the body, and others the extremities  
 of the wings and the anterior border, and in others the tip of the abdomen  
 are black.

11. *Ptilia concinna*.

*Hylotoma concinna*, *Klug, Jahrb. d. Insect.* i. p. 146, n. 82, pl. ii. fig. 8 (1834).

*Hab.* Mexico.

12. *Ptilia basipunctata*.

(Plate III. fig. 11.)

Exp. al. 9 lin., long. corp.  $4\frac{1}{2}$  lin.

Pale testaceous; vertex, centre of metathorax (but not the sides, scapulæ, or scutellum), and the extremity of abdomen black above; antennæ compressed, finely ciliated, yellowish at the base and blackish beyond the middle. Legs testaceous, except the tips of the hind tibiæ and the last three or four joints of the hind tarsi, which are black. Wings hyaline, brown at the base and extremity. Fore wings narrowly vitreous at the extreme base, and with two vitreous spots in the median and submedian cells: the stigma and adjoining portion of the costa, above the vitreous part of the wing, are yellow, and the vitreous portion extends along the third discoidal cell to the hind margin. On the hind wings the dark coloration at the base is uninterrupted, but ceases at the anal nervure; and that on the border grows suddenly narrower below the discoidal nervure.

Allied to *Hylotoma concinna*, but can hardly be the female of that species.

*Hab.* Mexico, Honduras.

*Rusobria carinata*, *Cameron, Trans. Ent. Soc.* 1878, p. 151.

*Hab.* Brazil.

15. *Ptilia bicolor*.

(Plate III. fig. 12.)

Exp. al. 6 lin., long. corp. 3 lin.

Head above, centre of thorax in front, and abdomen black; the remainder of the thorax, the scutellum, and first segment of the abdomen reddish; face and legs (except the tips of hind tibiæ and the hind tarsi, which are black) pale testaceous; the rest of the

undersurface of the body entirely black except the pleura and sides of the pectus in front, which are reddish. Fore wings smoky brown, with two vitreous stripes running downwards on each side of the very large stigma, the first broadest at its lower extremity, where it is intersected by a nervure, the second rather oblique and running towards the anal angle. Hind wings hyaline, the inner and hind margins somewhat clouded.

♂. *Diolocera curtisi*, *Cameron, Trans. Ent. Soc. Lond.* 1878, p. 147.

*Female.* Exp. al. 1 poll., long. corp. 6 lin.

Head, thorax, and first two pairs of legs rufo-testaceous; first two joints of antennæ of the same colour, the second brownish above; third joint of antennæ, abdomen, hind tibiæ above, and four last joints of hind tarsi blue-black; hind femora, base of tibiæ, and first joint of tarsi ochraceous. Fore wings hyaline, with the base, a band across the centre, and the extremity of the third submarginal cell smoky brown, with a violaceous shade; hind wings smoky hyaline, with a violaceous shade, and more or less clear before the apex.

Judging from the analogy of the sexes in *Ptenos serratus*, I have no doubt that the insect with transparent wings which Curtis figures as the male really is so. None of our four female specimens have more than three submarginal cells.

## 30. PTENUS.

*Ptenos*, *Nort. Trans. Amer. Ent. Soc.* iv. p. 77 (1872).

*Ptilia*, sect. 2, *Nort. l. c.* ii. p. 367 (1869).

*Diolocera*, *Cameron, Trans. Ent. Soc. Lond.* 1878, p. 145.

1. *Ptenus serratus*.

(Plate IV. figs. 2 & 3.)

*Male*. Exp. al. 8 (?) lin., long. corp. 5 lin.

*Female*. Exp. al. 1 poll., long. corp. 6 lin.

*Male*. Head above, antennæ, and thorax black, shining; abdomen with a slight violet shade; cheeks shading into testaceous below. First two joints of antennæ testaceous, the first twice the length of the second and pear-shaped, the second short, and with a strong projection upwards, making it appear to be placed obliquely; third joint thick, furcate, and densely pilose. Face, prothorax, pectus, legs, and the middle of the alaræ beneath testaceous; prothorax densely clothed with short hair in front, giving it a serrated appearance at the edges. Wings clear hyaline, with piceous nervures; stigma black; fore wings with four submarginal cells on the right side and five on the left.

*Female*. Closely resembles that of *Diolocera ellisi*. Head, thorax, and legs testaceous; first two joints of antennæ, and sometimes the base of the third, testaceous; third joint black, smooth, longer and more erect than in *D. ellisi*. Abdomen violet-black, except at the base beneath; hind tibiae black, and the four last joints of the hind tarsi brown above. Fore wings hyaline, with four submarginal cells, the second removing both recurrent nervures; a bulla on the nervule dividing the first and second cell. The violet-brown band is narrower and feebler, but more sharply defined than in *D. ellisi*, and the base and apex are similarly dusky. Hind wings as in *D. ellisi*.

Two males and two females of this interesting species stood among the series of *D. ellisi* in the British Museum. The extreme apex of the wings is damaged in all our specimens of *P. serratus*.

*Hab.* Brazil.

*♂ & ♀* (Types of species.) Catagalla. Presented by F. Smith, Esq.

2. *Ptenus sulcicornis*.

*Diolocera sulcicornis*, *Cameron, Trans. Ent. Soc. Lond.* 1878, p. 145.

*Hab.* Prainha.

3. *Ptenus americanus*.

*Tentredo americana*, *Lin., Syst. Nat.* i. p. 555, n. 6 (1758).

*Hyloterma brasiliense*, *Köf., Linn. Mjg.* vi. p. 308, n. 10 (1814).

*Hab.* Bahia.

4. *Ptenus violaceus*.

(Plate IV. fig. 5.)

Exp. al. 1 poll. 3 lin., long. corp.  $6\frac{1}{2}$  lin.

Head, antennæ, tibiæ, tarsi, and abdomen blue-black; thorax and femora rufo-testaceous. Wings smoky brown, glossed with violet, paler towards the tips of the fore wings; a black dot in the second submarginal cell, which exists also in the two following species.

*Hab.* Brazil.

a. ♀. (Type of species.)                      Rio Janeiro.                      A. Fry, Esq.

5. *Ptenus albicollis*.

*Hylotoma albicollis*, *Klug. Jahrb. d. Insect.* i. p. 245, n. 76 (1834).

*Hab.* Brazil?6. *Ptenus diversipes*.

(Plate IV. fig. 4.)

Exp. al. 1 poll., long. corp. 5 lin.

Head, antennæ, scutellum, and hinder part of thorax steel-blue; abdomen steel-blue, shading into violet above; scapulæ, prothorax, pectus, front and sides of mesothorax, the two first pairs of femora, and base of tibiæ rufo-testaceous, as are also the hind femora beneath; the legs otherwise steel-blue. Wings smoky brown, slightly glossed with violet, their extremities clearer; nervures black or violaceous; third submarginal cell square.

*Hab.* Amazons.

a. ♀. (Type of species.)                      Santarém.                      H. W. Bates, Esq.  
b. ♀.                                              Amazons.

7. *Ptenus consors*.

(Plate IV. fig. 6.)

Exp. al. 1 poll. 2 lin., long. corp. 6 lin.

Closely resembles *D. diversipes*, but the antennæ are longer and more pointed; the second joint is rufous, and the third is piecous beneath. The abdomen is greenish black rather than bluish black above, and the wings are somewhat more opaque and much more strongly glossed with violet. The third submarginal cell distinctly wider above than below.

*Hab.* East Brazil.

a. ♀. (Type of species.)                      East Brazil.                      Mrs. J. P. G. Smith.

8. *Ptenus atriceps*.

(Plate IV, fig. 8.)

Exp. al. 13 lin., long. corp. 5 lin.

Testaceous; head (orally excepted), a spot in front of thorax, a small one on the scutellum, a large bifid spot on each side of the pronotum, the four last segments of the abdomen, and the hind tibiae black; the preceding segment of the abdomen is also blackish above. Wings deep yellowish hyaline, with yellow nervures; hind margins blackish, nervures darker.

Much resembles *Ptenus cavellii*, except in having four submarginal cells.

*Hab.* Brazil?

$\sigma$  1. (Type of species)                      R. J. Cresson.

9. *Ptenus bonariensis*.

*Pachylota*, *Westw. Arc. Ent.* i. p. 24 (1841).

1. *Pachylota audouinii*.

*Pachylota audouinii*, *Westw. Arc. Ent.* i. p. 24, pl. vii. fig. 3 (1846).

*Hab.* West Africa? or South America?

a. ♀.

S. America?

2. *Pachylota varicolor*.

*Pachylota varicolor*, *Nort. Trans. Amer. Ent. Soc.* iv. p. 79 (1872).

*Hab.* Mexico.

## 32. ATHERMANTUS.

Characters of *Hylotoma*, but with the tibiæ rather flattened and clothed with short bristles; two end spurs, but none in the middle. Third joint of the antennæ rather short and thick, flattened towards the extremity. The antenna will probably prove to be longer, ciliated, but not furcate, in the males.

In the type the first discoidal cell on the left side is divided by an additional nervule, thus making three recurrent nervures on one side; the right side is normal.

1. *Athermantus imperialis*.

(Plate III. fig. 18.)

*Hylotoma imperialis*, *Smith, Ann. Nat. Hist.* (3) vi. p. 254 (1860).

Exp. al.  $1\frac{1}{2}$  poll., long. corp. 9 lin.

Brilliant purple, with changing violet tints above; undersurface and legs dark blue, smooth, and shining; third joint of the antennæ black; wings deep yellowish hyaline; nervures reddish yellow.

This magnificent species is probably the largest and handsomest yet described in this subfamily.

*Hab.* North China.

*Hylotoma aurata*, *Zadd. Schrift. Königsb.* iv. p. 101 (1863).

*Hab.* Syria.

37. *Hylotoma simillima*.

(Plate IV. fig. 18.)

*Hylotoma simillima*, *Smith, Trans. Ent. Soc. Lond.* 1874, p. 375.

Exp. al. 7-10 lin., long. corp. 4-5 lin.

Blue-black, shining, but much duller than in *similis*; antennæ black, shorter, ciliated in the male; legs dull blue-black. Wings fusco-hyaline, less strongly glossed with blue, and much clearer than in *similis*.

The form and size of the middle cells of the hind wings vary very much in different specimens, and even on different sides of the same specimen. One specimen from the Amoor was placed with *H. similis*: it appears to belong to *simillima*, but has the basal half of the hind tibiæ whitish. It is quite possible that this species may prove to be identical with *H. berberidis*; but I have not a sufficient series of the latter to compare.

*Hab.* Northern Asia.

40. *Hylotoma flavicollis*.

(Plate IV, fig. 17.)

*Hylotoma flavicollis*, *Cameron, Trans. Ent. Soc. Lond.* 1876, p. 400.

Exp. al. 10 lin., long. corp. 5 lin.

Deep violet-blue, thorax wholly rufo-testaceous; pleura narrowly of the same colour. Antennæ black, long, somewhat widened and flattened towards the extremity, and grooved beneath. Wings smoky hyaline, with a rich violet iridescence.

Closely allied to *H. captiva*.*Hab.* China.

a. ♀. (Type of species.) Hong Kong. J. C. Bowring, Esq.

41. *Hylotoma disparilis*.

(Plate V, figs. 7 &amp; 9.)

*Hylotoma humeralis* (p.), *Smith (nec Beauv.), Trans. Ent. Soc. Lond.* 1874, p. 374.

♀ Exp. al. 8 lin., long. corp. 4 lin.; ♂ exp. al. 6 lin., long. corp. 2 lin.

Head and lateral lobes of the mesothorax shining black; thorax otherwise rufo-testaceous; abdomen yellow; antennæ black, front legs aneous above, and testaceous on the inside; four hind femora yellow; tibiae and tarsi black, the former yellowish on the outside. Wings dusky hyaline, violaceous towards the base.

♂ (?). Head and front of thorax brassy greenish black; antennæ black, densely ciliated on both sides, pectus steel-blue, shining; abdomen yellow, banded above with violet-brown in the middle; metathorax of the same colour above; legs yellow, four front femora violaceous; extremities of hind tibiae and hind tarsi black. Wings smoky hyaline.

*Hab.* Japan.

a. ♀. (Type of species.) Hiogo. G. Lewis, Esq.

b. ♂? Hiogo. G. Lewis, Esq.

42. *Hylotoma quadripunctata*.

(Plate V, fig. 12.)

*Hylotoma humeralis*, var. ♀, *Smith, Trans. Ent. Soc. Lond.* 1874, p. 374.

Exp. al. 8 lin., long. corp. 3½ lin.

Head and thorax steel-blue, with a slight greenish tinge, especially on the face; antenna black; prothorax, an adjoining dot, and another behind the base of the fore wings on each side, pleura, sides of pectus, and scutellum rufo-testaceous; abdomen yellow, corru-

gated; pectus black beneath, divided by a rufo-testaceous line in the middle. Legs black: hind coxæ and inside of hind femora yellow, a paler line down the inside of hind tibiæ. Wings dusky hyaline, iridescent.

*Hab.* Japan.

a. ♀. (Type of species.) Hiogo. G. Lewis, Esq.

#### 43. *Hylotoma dubia*.

(Plate V. fig. 10.)

*Hylotoma similis*, *Smith (nec Vollenh.)*, *Trans. Ent. Soc. Lond.* 1874, p. 375.

Exp. al. 9 lin., long. corp. 4½ lin.

Blue-black, pleura and sides of pectus rufo-testaceous; antennæ black; abdomen yellow, shining. Wings hyaline, with a violaceous iridescence; nervures black.

Mr. Smith afterwards placed this species as a variety of *H. pagana*.

*Hab.* Japan.

*Hab.* Pennsylvania.

47. *Hylotoma eximia*.

(Plate V. fig. 11.)

Exp. al. 10 lin., long. corp. 5 lin.

Blue-black; tibiæ and first two joints of the tarsi white, black at the extremity; the spurs and the remaining joints of the tarsi black. Wings hyaline, clouded at the extremities, darkest in the radial cell and the second and third submarginal cells. Antennæ rather long, clypeus reddish.

Allied to *expansa* and *fasciata*; but easily distinguished from these and most other species of the *ustulata*-group by its clouded wings and the colour of the legs. From *maculayi* and *cærulea* it is easily distinguished by its larger size and long antennæ.

*Hab.* Mexico.

a. ♀. (Type of species.)

*Hab.* Georgia.

49. *Hylotoma analis*.

(Plate V. fig. 13.)

*Hylotoma analis*, *Leach, Zool. Misc.* iii. p. 123, n. 5 (1817).

Exp. al. 8 lin., long. corp. 4 lin.

Head and thorax blue-black above; antennæ, legs, and pectus deep black, the latter very shining; abdomen rufo-testaceous, the last four segments above and the last three below black. Wings brownish hyaline, strongly suffused with violet; antennæ ciliated.

*Hab.* Georgia.

a. ♂. (Type of species.)

Georgia.

Probably from Abbot's collection.

50. *Hylotoma clavicornis*.

(Plate V. fig. 14.)

*Tenthredo clavicornis*, *Fabr. Spec. Ins.* ii. p. 408, n. 13 (1781).

*Hylotoma clavicornis*, *Norton, Trans. Amer. Ent. Soc.* i. p. 66 (1867).

Exp. al. 7 lin., long. corp. 3½ lin.

Head, thorax, and pectus black, the last with a slight bluish shade;

antennæ black, slightly piceous beneath; abdomen luteous, with only the borders of the sheaths of the saws below (the extremities of which are visible above) black; the four front femora blue-black; front tibiæ and tarsi whitish; four hind tarsi blackish, hind femora and four hind tibiæ luteous in the middle, and blue-black at the extremities. Wings hyaline, with yellowish nervures towards the base; stigma large, piceous, with an oblique shade beneath.

Described from the type in the Banksian collection, which is a female in very good preservation.

There are five specimens from Hudson's Bay in the British Museum, which I am inclined to regard for the present as varieties of this species. The colour of the antennæ, tibiæ, and tarsi varies from black or brown to yellowish, and in all at least the last two segments of the abdomen are black. The only male closely resembles the type of *H. analis*; but the body is rather longer, and the wings are yellowish hyaline, with a shade below the stigma, which is nearly obliterated in the type by the dark colour of the wings.

*Hab.* North America.

<i>a.</i> ♀. (Type of species.)	North America.	Banksian Collection.
<i>b-f.</i> ♂ ♀.	St. Martin's Falls.	Dr. Barnston.

### 51. *Hylotoma borealis*.

(Plate V. fig. 16.)

Exp. al. 9 lin., long. corp. 4 lin.

Head black, face reddish; antennæ black to one third of the length of the last joint, and yellowish beyond. Body wholly rufo-testaceous; basal half of the front femora black, and the four hinder trochanters and middle of the femora darker. Wings hyaline, dusky yellowish towards the base; stigma brown; the shade beneath slightly marked; nervures piceous.

Perhaps a variety of *H. clavicornis*.

*Hab.* Hudson's Bay.

<i>a.</i> ♀. (Type of species.)	St. Martin's Falls.	Dr. Barnston.
---------------------------------	---------------------	---------------

### 52. *Hylotoma cyra*.

(Plate V. fig. 15.)

Exp. al. 10-11 lin., long. corp. 5 lin.

Head, thorax, pectus, and femora shining black; antennæ fuscous, paler towards the extremity and beneath; abdomen yellow, the outer edges of the sheaths of the saws, and sometimes the whole sheaths, black. Wings yellowish hyaline, the costal cell and all the nervures on the costa and inner margins, and at the base of the fore wings, yellow, the rest piceous. Stigma brown, with a sharply defined shade, not extending beyond the second submarginal cell, in which a dis-

inct dark spot is placed. There is also a dark cloud on the upper part of the outer apical cell of the fore wings. Tibiæ and tarsi pale yellow, the latter darker towards the extremity.

Closely allied to *H. clavicornis* and *viridescens*. One specimen bears the MS. name of *xanthogaster*, which is preoccupied in the genus. There is no locality label: but the specimens are probably from Georgia.

*Hab.* Georgia?

a-c. ♀.

Georgia?

### 53. *Hylotoma abdominalis*.

(Plate V, fig. 17.)

*Hylotoma abdominalis*, Leach, *Zool. Misc.* iii. p. 123, n. 7 (1817);  
*Nort. Trans. Amer. Ent. Soc.* i. p. 66 (1867).

Exp. al. 10-12 lin., long. corp. 5½ lin.

Blue-black, antenna and legs darker: abdomen yellow, shining: wings violaceous-hyaline.

One specimen has the nervellæ between the second and third sub-marginal cells nearly obsolete on the right side.

*Hab.* Southern United States.

a-c. ♀. (Type of species.)

*Hylotoma erythrosoma*, *Leach, Zool. Misc.* iii. p. 124, n. 8 (1817).

Ferruginous red; antennæ, eyes, legs, and tegulæ blackish; hind coxæ testaceous. Wings dusky hyaline, strongly glossed with violet; inner margin of the hind wings clear hyaline. A second specimen (also a female) has the middle and side lobes of the thorax, and the scutellum as well as the prothorax and pectus on one side, almost wholly black, while the prothorax and scutellum on the other are of the ground-colour. The fore wings are clearer towards the hinder angle than in the type of *erythrosoma*, Leach, which I have just described. The second specimen only differs from Fabricius's description of *coccinea* by the black colour not being confined to the middle of the thorax.

*Hab.* North America.

*Hab.* Punjab.

80. *Hylotoma sinensis*.

(Plate V. fig. 2.)

*Hylotoma microcephala*, *Cameron (nec Vollenh.), Trans. Ent. Soc. Lond.* 1876, p. 460.

Exp. al. 7-11 lin., long. corp. 3-5 lin.

Head small, blue-black; antennæ testaceous, brown towards the extremity. Body yellow, thorax darker, base and tip of abdomen and middle of pectus more or less distinctly marked with violet-brown; scutellum sometimes of the same colour; legs testaceous, more or less varied with violet-brown. Wings light fusco-hyaline, with a violet iridescence; hind wings clearer.

I am unable to detect middle spurs in this species.

*Hab.* China.

a-c. ♂ ♀. (Types of species.)	Amoy.	Purchased.
d. ♀.	Foo-Chow-Foo.	G. T. Lay, Esq.

81. *Hylotoma xanthogaster*.

(Plate V. fig. 1.)

*Hylotoma xanthogaster*, *Cameron, Trans. Ent. Soc. Lond.* 1876, p. 459.

Exp. al. 8-9 lin., long. corp. 4 lin.

Head, thorax, and legs steel-blue; metathorax and the middle of the abdomen above pale violaceous; sides, extremity and under-surface of abdomen uniform yellow. Wings smoky hyaline; third submarginal nervure curved outwards above the middle. In one

specimen the second submarginal nervule is absent on one side, thus throwing the second and third submarginal cells into one.

*Hab.* North India.

a. ♀. (Type of species.) Nepal. Gen. Hardwicke.  
b. ♀. North India. Capt. Reid.

### 82. *Hylotoma victorina*.

(Plate V, figs. 5 & 8.)

Exp. al. 7 lin., long. corp. 3 lin.

Head, thorax, postus, and legs smooth, shining steel-blue; antennæ black, rather long and thick, clothed with very short pubescence. Abdomen more or less violet-brown above; sides, extremity and under-surface yellow. Wings fusco-hyaline with a violet iridescence. In the female, the abdomen is yellow, with only the first two, three, or four segments violaceous on the back.

The most strongly-marked male, in which the abdomen is wholly violet-brown above, except at the sides and extremity, is from Hong Kong. This insect is smaller and darker than *H. xanthogaster*, but may not be truly distinct.

*Hab.* China.

a, d. ♂ ♀. (Type of species.) Foo-Chow-Foo G. T. Lay, Esq.  
c, f. ♂ ♀. (Type of species.) Hong Kong. J. C. Bowring, Esq.

### 83. *Hylotoma lutea*.

(Plate V, figs. 1 & 6.)

*Hylotoma lutea*, *Common*, *Trans. Ent. Soc. Lond.* 1876, p. 459.

Exp. al. 7-8 lin., long. corp.  $3\frac{1}{2}$ -4 lin.

Dark luteous, abdomen paler, and marked with a row of purplish-black spots (divided in the middle (absent in the male)). Head, antennæ, and legs black-black, four hind femora more or less luteous at the base, a blackish-purple spot on each side of the mesothorax, between the wings; metathorax blackish purple above. Wings dusky hyaline, with piceous nervures; costa and stigma black.

*Hab.* North India.

a, b. ♂ ♀. (Types of species.) North India. Capt. Reid.

### 84. *Hylotoma bipunctata*.

(Plate V, fig. 3.)

*Hylotoma bipunctata*, *Camerac*, *Trans. Ent. Soc. Lond.* 1877, p. 90.

Exp. al. 4 lin., long. corp. 9 lin.

Closely allied to *H. lutea*, from which it chiefly differs by the four hind femora being much more distinctly luteous, and the dark

transverse bars on the abdomen not being divided in the middle. I cannot detect much difference in the colour of the antennæ in the two species. One of the specimens of *bipunctata* is labelled "excisa, type," which is clearly an error.

*Hab.* India.

a, b. ♀. (Types of species.) India.

### 85. *Hylotoma simlaensis*.

*Hylotoma simlaensis*, Cameron, *Trans. Ent. Soc. Lond.* 1878, p. 91.

*Hab.* Simla.

D. *African species*.

### 86. *Hylotoma sugillata*.

*Hylotoma sugillata*, Klug, *Jahrb. d. Insect.* i. p. 232, n. 27 (1834).

*Hab.* South Africa.

a. ♀.	S. Africa.	Dr. Smith.
b. ♀.	Interior of S. Africa.	Earl of Derby.

### 87. *Hylotoma andromeda*.

(Plate IV. fig. 7.)

Exp. al. 9 lin., long. corp. 5 lin.

Head and antennæ blue-black; prothorax and sides of mesothorax luteous; the whole centre and hinder portion of the thorax blue-black. Abdomen shining violet-brown in the middle above; the last three segments blue-black, both above and below; undersurface, and sides otherwise luteous. Pectus blue-black in the middle and behind; sides luteous. Legs blue-black. Fore wings smoky hyaline, with a violet iridescence; hind wings clear hyaline, with the extremities clouded.

*Hab.* Natal.

a. ♀. (Type of species.) Natal. Dr. Krauss.

### 88. *Hylotoma dirce*.

(Plate IV. fig. 15.)

Size of *H. andromeda*, to which it is closely allied.

Head and antennæ black; thorax, including the scutellum and postscutellum, pectus, legs, and last three segments of the abdomen brassy black; prothorax, tegulæ, and six basal segments of the abdomen beneath and at the sides luteous: above, they are banded with violet-brown in the middle, the incisions narrowly luteous. Wings dusky hyaline, but clearer than in *andromeda*, with a dusky shade beneath the stigma.

*Hab.* South Africa.

a. ♀. (Type of species.) Lake Ngami. Mr. Andersson.

89. *Hylotoma speciosa*.

*Hylotoma speciosa*, *Klug, Jahrb. d. Insect. i. p. 233, n. 32 (1834)*.

*Hab.* Cape.

90. *Hylotoma urania*.

(Plate IV. fig. 10.)

Exp. al. 10 lin., long. corp. 5 lin.

Shining steel-blue, glossed with purple and violet; segments 3-5 of the abdomen luteous, with a violet-blue spot on the middle of each above. Undersurface steel-blue; segments 3-5 of the abdomen, and the tibiae and tarsi, luteous, extremities of the latter dusky. Wings hyaline, with yellow nervures towards the base, and brown ones towards the extremity; tips of fore wings darker, a slightly oblique brown shade strongly glossed with violet extending across the fore wings from the stigma.

*Hab.* South Africa.

a, b. ♀. (Types of species.)

Natal.

Herr Guenzius.

91. *Hylotoma bicolorata*.

*Hylotoma bicolorata*, *Klug, Berl. Mag. vi. p. 296, n. 16, pl. vii. fig. 4 (1814)*.

*Hab.* Sierra Leone.

92. *Hylotoma gambiæ*.

(Plate IV. fig. 9.)

Exp. al. 7 lin., long. corp.  $3\frac{1}{2}$  lin.

Head black; antenna very long and thick, setose; the first joint is black, the second reddish brown, and the third piceous, with a large oval whitish spot at the extremity. Thorax black in the middle; prothorax, sides of mesothorax, and the whole remainder of the insect reddish luteous, except the joints of the four hinder tarsi, which are ringed with black, and the extremities of the hind tibia, which are also black. Wings damaged, but probably yellowish hyaline.

Possibly the male of *H. bicolorata*, Klug.

*Hab.* Gambia.

a, ♂. (Type of species.)

Gambia.

93. *Hylotoma xanthomela*.

*Hylotoma xanthomela*, *Klug, Jahrb. d. Insect. i. p. 234, n. 36 (1834)*.

*Hab.* Guinea.

113. *Hylotoma terminalis*.

*Hab.* Para.

114. *Hylotoma dryope*.

(Plate VI. fig. 3.)

Exp. al. 7 lin., long. corp. 4 lin.

Pale shining yellow, the last three segments blackish above, and the ends of the saws projecting like a pair of pincers. Head above the antennæ black; below yellow; antennæ long and slender, yellowish at the base and black at the extremity; tips of front tarsi, the intermediate tarsi, the hind tibiæ (and doubtless the tarsi also) black. Wings hyaline, with piceous nervures, dusky towards the extremities; costa yellowish.

Allied to *H. pœcila*.

*Hab.* Amazons.

a. ♀. (Type of species.)                      Amazons.                      H. W. Bates, Esq.

115. *Hylotoma atripes*.

*Hylotoma atripes*, *Hobngren, Eugénies Resa, Zool., Ins.* p. 391 (1868).

*Hab.* Brazil.

## Subfamily III. LOBOCERATINÆ.

I propose this new subfamily for three remarkable genera which will not accord well with any defined group, being intermediate between several. They resemble some of the *Cimbicinae* (*Peryta*, &c.) in the absence of a discoidal cell: the densely pubescent antennæ resemble *Shizocerus*, and the middle spurs connect them with *Hylotoma*; while their general appearance is that of the typical *Tenthredininae*.

## 34. PERANTHERIX.

*Perantherix*, *Westw. Thes. ent. Oxon. p.* 109 (1874).

1. *Perantherix pumilio*.

*Perantherix pumilio*, *Westw. Thes. ent. Oxon. p.* 109, pl. xx. fig. 1 (1874).

*Hab.* Amazons.

2. *Perantherix fatima*.

(Plate VI. fig. 7.)

Exp. al. 7 lin., long. corp.  $3\frac{1}{2}$  lin.

Testaceous; eyes, antennæ (except basal joint), two longitudinal spots on thorax above, extreme apex of abdomen beneath, and last three joints of all the tarsi black. Wings hyaline, yellowish towards the extremity of the fore wings; costa yellow.

*Hab.* Amazons.

a. ♂. (Type of species.)

Amazons.

H. W. Bates, Esq.

## 35. LOBOCERAS.

Antennæ 7-jointed, densely clothed with short diverging hairs, which sometimes renders the divisions between the joints rather indistinct; second joint shorter than the first, the third not much longer than the fourth, and the remainder of nearly equal length; the last truncated and hollowed at the apex, giving them the appearance of being broken off when viewed from beneath, but, if so, all the specimens before me have been broken in the same manner, which is improbable. Head large, about as wide as thorax; eyes large and prominent; thorax of the usual form, more or less deeply channelled; abdomen moderately long. Legs moderately long and thick; hind coxæ

long and large, almost as in *Macrophya*; anterior and hind tibiæ with two spurs at the extremity, intermediate tibiæ with one at the extremity and another in the middle: all very long and sharp, especially the inside spur on the hind tibiæ; first joint of tarsi as long as all the remainder. Wings rather long, moderately broad, with one marginal (appendiculate) and four submarginal cells, the first and second each receiving a recurrent nervure; no lanceolate cell, the commencement of two lower anal veins being lost in the inner margin near the base: hind wings with one middle cell and all the marginal cells open; the appendiculate cell is much larger on the hind wings than on the fore wings.

### 1. *Loboceras mexicanum*.

(Plate VI. fig. 4.)

Exp. al. 10 lin., long. corp. 4 lin.

Testaceous; antennæ (except the two first joints), abdomen (from the end of the fifth segment), femora (except at the base), and tarsi black. Wing yellowish hyaline, darker on the fore wings, with yellow nervures; tips smoky, with black nervures.

*Hab.* Mexico.

a. ♀. (Type of species.)                      Orizaba.                      M. Sallé.

### 2. *Loboceras hippolyte*

(Plate VI. fig. 6.)

Exp. al. 11 lin., long. corp. 4½ lin.

Resembles the last species. Testaceous; antennæ, except the two basal joints, cheeks, front and centre of mesothorax, the two last joints of the abdomen, and the hind tarsi and extremities of the hind tibiæ black. Wings as in the last species, but clearer, especially before the dark apex of the fore wings and on the hind wings.

*Hab.* Amazons.

a. ♀. (Type of species.)                      Amazons.                      H. W. Bates, Esq.

### 3. *Loboceras lucidum*.

(Plate VI. fig. 5.)

Exp. al. 7-8 lin., long. corp. 4 lin.

Shining testaceous: head (except mouth), a spot in front of thorax (sometimes absent), scutellum, more or less of the apex of the abdomen, and the fore hinder tibiæ and tarsi and front tarsi, and sometimes the front tibiæ also, black. Wings hyaline, costa and nervures black, base and apex infuscated.

*Hab.* Amazons.

a-c. ♀. (Type of species.)                      Amazons.                      H. W. Bates, Esq.

## 36. AULACOMERUS.

(1850).

*Hab.* C. Yucatan.

## Subfamily IV. PTERYGOPHORINÆ.

## 37. PTERYGOPHORUS.

*Pterygophorus* *Westw. Zool. Mag.* vi. p. 270 (1844).

1. *Pterygophorus cygnus*.

(*Westw. V. p. 270*.)

*Fig.* *Mag. Zool.* (1844), *Mag. Zool.* (1844).

Antennæ long. Basal segmente præsertim r. x. base and extremity of abdomen with a row of 12 small black tubercles (10 for ix, a large pyramidal one for x) just behind each flank; stripe behind the head (on anterior surface of lower segment) yellow; femora violet-tinted; tibiae brown; a narrow line across the meso- and meta-thorax apparently ringed with yellow and black; wings with a row of 12 black nervures; petiole black; anterior abdominal segment marked by a small yellow mark.

*Hab.* West. Australia.

a. ♂. (Type, *Cygnus*.) South Texas. Mr. De Boulay.

2. *Pterygophorus cyaneus*.

*Pterygophorus cyaneus*, *Leach, Zool. Mag.* (l. p. 110, n. 3) (1817).

*Hab.* Australia.

b. ♂. Victoria. Mr. Deane  
c. ♀. Victoria.

3. *Pterygophorus leachii*.

(Plate VI. fig. 9.)

Exp. al. 10-11 lin., long. corp. 4-5 lin.

*Male*. Steel-blue; prothorax, hinder halves of the scutellum, hinder portion of the metathorax, and first segment of the abdomen luteous; two last segments of the abdomen rufous above and at the sides; legs ochraceous, the greater part of the femora and of the hind tarsi blackish. Wings hyaline, with black nervures, strongly glossed with violet, especially on the fore wings.

*Female*. Similar, but more shining, the scutellum and metathorax merely edged with luteous behind; penultimate segment of the abdomen luteous above in the middle; scapule luteous, legs mostly testaceous, femora darker.

*Hab.* Queensland.

## 40. PERREYIA.

*Perreyia*, *Linn. Hort. Scl.* p. 301 (1810)\*.

*Perreyia*, *Koen. Myc. Hort. Bot.* p. 109 (1814).

\* The *Perreyia* described by Linnaeus (*Perreyia* N. 11) does not appear to be a species with 14 segments. Linnaeus's *Perreyia* probably includes species with 13, 14, 15, or 16 segments. Koenig's *Perreyia* is a species with 14 segments. All the species described by Linnaeus and Koenig are *Perreyia* in respect to characters except in the number of segments. The characters of *Perreyia* are: *Perreyia* (e. g. *Perreyia* *Perreyia* W. & A.) is a species with 14 segments.

1. *Perreyia lepida*.

*Perreyia lepida*, *Brullé, Hym. iv. p. 661, pl. xlvi. fig. 2 (1846)*.

*Hab.* South America.

a. ♀.                      Brazil.  
b. ♀.

2. *Perreyia capitula*.

*Perreyia capitulum*, *Norton, Trans. Amer. Ent. Soc. i. p. 223 (1867)*.

*Hab.* Mexico.

a. ♀.                      Orizaba.                      M. Sallé.

3. *Perreyia (?) anomala*.

(Plate VI. fig. 1-1.)

Exp. al. 10 lin., long. corp. 4 lin.

Uniform testaceous; head, antennæ, and four hind tarsi black; face testaceous. Antennæ 13(?)-jointed; third joint half as long again as fourth; fourth rather longer than the succeeding ones, which are of uniform length, and furnished with short processes on each side at the extremity. Wings smoky hyaline, clearer towards the edges; both recurrent nervures received by the second submarginal cell, the first near the middle, and the second just before the intersection of the second and third cells; fusciculate cell petiolated; hind wings with two middle cells.

*Hab.* Mexico.

a. ♀. (Type of species.)                      Orizaba.                      M. Sallé.

4. *Perreyia compta*.

(Plate VI. figs. 13 & 15.)

*Perreyia comptus*, *Norton, Trans. Amer. Ent. Soc. i. p. 223 (1867)*.

*Hab.* Mexico.

a-d. ♂ ♀.                      Orizaba\*.                      M. Sallé.

5. *Perreyia picea*.

*Brachytoma picea*, *Westw. Thes. ent. Oxon. p. 110, pl. xx. fig. 6 (1844)*.

*Hab.* Amazons.

a. ♀.                      Santarem †.                      H. W. Bates, Esq.

\* One specimen has five submarginal cells on one side, the third cell being completely divided by an additional nervule. Norton professes to have described a male; but I doubt if he was acquainted with any male of this genus. The insect which appears to be the male of *P. compta* has pectinated antennæ, a dull fulvous thorax, a black scutellum, and the abdomen clouded with brown.

† The female differs little from Prof. Westwood's description of the male, except in the antennæ, which are not pectinated, and appear to be only 12-jointed.

6. *Perreyia vitellina*.

*Brachytorna vitellina*, *Westw. Thes. ent. Oron.* p. 110, pl. xx, fig. 5 (1874).

*Hab.* Brazil.

7. *Perreyia amazonica*.

(Plate VI, fig. 17.)

Exp. al. 7 lin., long, corp. 3 lin.

Black; thorax, pectus, and coxa wholly testaceous; wings smoky brown, with black dots in the median and second submarginal cells.

Closely allied to *P. vitellina*, Westw., but differs in the colour of the legs, which are described as "falvis, tarsi paullo obscurioribus" in *vitellina*, whereas in *P. amazonica* they are almost entirely black.

*Hab.* Amazon.

*a. b. f.* (Type of species.)      Amazon.      H. W. Bates, Esq.

8. *Perreyia melanoptera*.

*Leptocoris melanoptera*, *Ferty. Ent. Anz. Art.* p. 130, pl. xxvi, fig. 6 (1890, 1894).

*Hab.* Amazon.

9. *Perreyia fumipennis*.

*Brachytorna fumipennis*, *Westw. Thes. ent. Oron.* p. 110, pl. xx, fig. 3 (1874).

*Hab.* Amazon.

*a. d.*      Amazon.      H. W. Bates, Esq.

10. *Perreyia nigriceps*.

*Brachytorna nigriceps*, *Westw. Thes. ent. Oron.* p. 109, pl. xx, fig. 2 (1874).

*Hab.* Amazon.

## II. CAMPTOPRIUM.

*Camptoprium*, *Spar. Ann. Soc. Ent. Fr.* ix, p. 134 (1840).

1. *Camptoprium lepieuri*.

*Camptoprium lepieuri*, *Spar. Ann. Soc. Ent. Fr.* ix, p. 136, pl. vii, fig. 2 (1840).

*Hab.* Cayenne.

2. *Camptoprium atripenne*.

*Hylotoma atripennis*, *Fabr. Syst. Piez.* p. 27, n. 26 (1804).

*Hab.* South America.

a. ♀. Tapajos. H. W. Bates, Esq.

3. *Camptoprium humerale*.

(Plate VI. fig. 16.)

Exp. al. 9 lin., long. corp. 4 lin.

Steel-blue; a spot at the base of the wings above, front legs (tarsi and a line on the outside tibiae excepted), intermediate coxæ, and undersurface of femora and pectus (except a dark spot in front of each of the intermediate coxæ) reddish testaceous. Wings smoky brown, with very wide and distinct bullar lines running through the submarginal and discoidal cells, and above the anal veins.

Possibly the male of the last species.

*Hab.* Amazons.

a. ♂. (Type of species.) Santarem. H. W. Bates, Esq.

4. *Camptoprium* (?) *nigriceps*.

(Plate VI. fig. 18.)

Exp. al. 7-8 lin., long. corp. 3 lin.

Shining testaceous, darkest on the thorax: head and antennæ black: four hind tibiae and tarsi fuscous: antennæ with only 10 joints, less distinctly separated than in the other species. Wings fuscous, slightly iridescent: a large bulla at the outer angle of the first discoidal cell, the diverging bullar lines only faintly indicated: a very distinct white dot at the base of the stigma, and a black one in the second submarginal cell.

Closely resembles *Perreyia* (?) *anomala*: but the antennæ differ so much that I dare not unite them as sexes.

*Hab.* Mexico.

a, b. ♂. (Types of species.) Orizaba. M. Sallé.

42. **ACHERDOCERUS.**

Shape of *Sclandria*. Antennæ short, 9-jointed, second joint very short, third rather longer than the others, which are pear-shaped and much widened at the extremity; head transverse, very small, not more than half the width of thorax. Wings with one marginal appendiculate cell and four submarginal cells, the second and third each receiving a recurrent nervure; lanceolate cell very small, petiolated; at the outer angle of the first discoidal cell is a large

vein: a white line runs from the first submarginal cell, and forks about the middle of the second, intersecting the remainder of the submarginal and discoidal cells, and widely expanding in the outer angle, without reaching the anal margin: hind wings with one small cell: empurpuration first birds above all the anal veins. Legs slender, not very long. Tarsal fifth and sixth terminal spurs.

*Alcedo trichocera*, var. *223*, *trichocera*.

1. *Achardocerus fumipennis*.

[PLATE VII, FIG. 1.]

Length, 5.0 mm.; hind wing, 2.4 mm.

Head, thorax, femora, tibiae, and anal surface of head reddish testaceous; legs plumbeous; tarsi and lateral legs darker; wings dusky brown.

*HOLOMERUS*.

♀ ♀.

♂ ♂.

M. Sallé.

19. DECAMERIA.

[PLATE VIII, FIGS. 1-5.]

*Decameria festiva*, var. *1*, *1*, *1*, *1*, *1*, *1*, *1*, *1*, *1*, *1*, *1*, *1*.

At *S. festiva*, *Decameria* may occur very locally, although extremely rare, in some districts of California, but it is necessary to refer to the *Alcedo trichocera* group. It differs from *Achardocerus fumipennis* in having the anal cell of the hind wing.

HEAD.—Length, 5.0 mm.; hind wing, 2.4 mm. The first two joints of the hind wing are of the same size as the remainder, which are of about equal length and are of the same thickness at the extremities. Fore wing with empurpuration of basal four secondary cells, and four submarginal cells, the outer spot of basal secondary cell, the first recurrent vein, the first secondary feather 1—solid, and the second just beyond (paramedian) of the second and third; large cell generally not solid. First secondary cell margined cell appendageless, or 0.0—0.0001—0.0002.

1. *Decameria festiva*.

[PLATE VIII, FIG. 2.]

Length, 5.4 mm.; hind wing, 2.4 mm.

Coloration, same as var. *festiva*, 1 mm. hind legs below the middle of the femora, all the basal first spurs of the intermediate tarsi black. Wings hyaline with plicose nervures, tips and a broad empurpuration the coarse dusky; striation yellow, with a yellow sclerous label, 0.0—0.0001 of the first discoidal cell is covered by the central dusky band (0.0150 extends within and below it), except

2. *Ancyloneura varipes*.

(Plate VII. fig. 6.)

*Ancyloneura varipes*, *Cameron, Trans. Ent. Soc. Lond.* 1877, p. 92.

Exp. al. 6 lin., long. corp. 3 lin.

Black, shining, covered with a fine whitish down; legs whitish, femora reddish, hind tibiæ and tarsi blackish; wings iridescent hyaline, clouded towards the extremities.

*Hab.* Aru Islands.

a. ♀. (Type of species.) Aru Islands.

## 47. CLADOMACRA.

*Cladomacra*, *Smith, Ann. Nat. Hist.* (3) vi. p. 256 (1860).

*Male.* Antennæ 16-jointed, pilose, at least as long as the whole body, the second joint short, all the others of nearly equal length; each joint is thickened into a round knob at the extremity, and from the base of the underside projects a very long pilose ramus; the last joint is thickened in the middle and curved beyond. Head transverse; eyes prominent, projecting a little in front. Fore wings with one marginal (not appendiculate) and four submarginal cells, the first nearly round, about the same size as the second, which is almost square and marked with the usual black spot; the third and fourth larger and oblong; all the transverse nervules with bullæ, and a detached bulla in the first discoidal cell; basal cell with a black dot near the extremity; lanceolate cell petiolated. Hind wings with one middle cell; interno-median cell broad, less than half the length of the wing, and expanded beyond the middle; the nervure bounding it below is marked with a bulla towards the extremity, and throws off a branch in opposite directions on each side, neither of which quite extend to the inner margin; legs with all their parts very long and slender, simple; tibiæ with two short spines at the extremity. Abdomen short, moderately broad.

*Female* unknown.

Mr. Smith placed this genus in the collection between *Cladius* and *Perreyia*; the bullæ are nearly similar to those of *P. lepida*.

1. *Cladomacra macropus*.

(Plate VII. fig. 8.)

*Cladomacra macropus*, *Smith, Ann. Nat. Hist.* (3) vi. p. 257 (1860);  
*Journ. Linn. Soc., Zool.* viii. pl. iv. fig. 1 (1865).

Exp. al. 7 lin., long. corp. 3 lin.

Rufo-testaceous; abdomen and more or less of the hind legs black; this is variable—in one specimen they are wholly black, and the extremities of the intermediate tibiæ and tarsi are blackish; in

another only the extremities of the hind tibiæ and the last three tarsi are black above; the antennæ are black, but more or less of the basal joints are of the ground-colour. Wings light brown, opaque, iridescent, nervures dark brown.

*Hab.* Celebes, New Guinea.

- a. ♂. (Type of species.) Menado. A. R. Wallace, Esq.  
 b. ♂. New Guinea. A. R. Wallace, Esq.  
 c. ♂.

#### 48. POLYCLONUS.

Antennæ about as long as the thorax and abdomen together, 18-jointed, each joint throwing off a long pilose ramus from the extremity; last joint tapering. Head transverse, narrow, less produced behind than in *Cladomacra*; eyes not projecting in front. Fore wings with one marginal (not appendiculate) cell, and four submarginal cells, the three first of nearly equal size, the fourth large, goblet-shaped; no bulke; lanceolate cell petiolated. Hind wings with one middle cell; interno-median cell moderately broad, slightly constricted in the middle, extending three quarters of the length of the wing, and not throwing off any nervules to the inner margin. Legs simple, hind tibiæ with two long terminal spurs. Abdomen moderately short and broad, slightly keeled.

##### 1. *Polyclonus atratus*.

(Plate VII, fig. 3.)

Exp. al.  $3\frac{1}{2}$  lin., long. corp. 2 lin.

Black, first two pairs of legs testaceous; femora blackish; hind legs blackish, knees and upper portion of the tibiæ testaceous. Wings clear hyaline, with piceous nervures.

*Hab.* Australia.

- a. ♂. (Type of species.) Australia. Mr. Dalm.

<i>bb-dd.</i> ♂ ♀.	Europe.	

3. *Cladius difformis*.

- Tenthredo difformis*, *Panz. Faun. Germ.* Heft 62, pl. x. (1799).  
*Cladius difformis*, *St.-Farg. Mon. Tenth.* p. 57, n. 165 (1823); *Costa, Faun. Nap., Tentr.* p. 10, pl. lxiii. fig. 2 (antenna) (1859).

*Hab.* Switzerland, Italy.

4. *Cladius isomerus*.

- Cladius isomera*, *Norton, Proc. Bost. Soc.* viii. p. 223 (1861); *id. Trans. Amer. Ent. Soc.* i. p. 74 (1867).

*Hab.* North America.

<i>a-d.</i> ♀.	St. Martin's Falls, Albany River, Hudson's Bay*.	Dr. Barnston.
<i>e.</i> ♂.	North America.	

## 50. TRICHIOCAMPUS.

*Trichiocampus*, *Hart. Blattw.* p. 176 (1837).

1. *Trichiocampus viminalis*.

- Tenthredo viminalis*, *Fall. Vetensk. Handl.* xxix. p. 117, n. 59 (1808).  
*Cladius viminalis*, *Vollenh. Tijdschr. Ent.* i. p. 176, pl. x. (1858);  
*Thoms. Hym. Scand.* i. p. 74, n. 5 (1871).  
*Nematus grandis*, *St.-Farg. Mon. Tenth.* p. 61, n. 179 (1823).  
♂. *Cladius luteicornis*, *Steph. Ill. Brit. Ent., Maud.* vii. p. 24, n. 7,  
pl. xxxviii. fig. 1 (1835).  
*Cladius eucera*, *Hart. Blattw.* p. 177 (1837).

*Hab.* Northern and Central Europe.

\* Two of these specimens were bred from bright yellow caterpillars, spotted with black on the sides, found feeding on smooth willow and aspen on July 29, 1838. (MS. note.)

<i>a, b.</i> ♂. (Types of <i>C. luteicornis</i> .)	Britain.	J. F. Stephens.
<i>c-g.</i> ♀. (As <i>C. grandis</i> .)	Britain.	J. F. Stephens.
<i>h.</i> ♀. (As <i>C. pectoralis</i> .)	Britain*.	J. F. Stephens.
<i>i.</i> ♂.	Britain.	
<i>k-n.</i> ♂ ♀.	Germany.	J. F. Ruthe.

2. *Trichiocampus pectoralis*.

*Nematus pectoralis*, *St.-Farg. Mon. Tenth.* p. 62, n. 180 (1823).

*Hab.* Paris.

3. *Trichiocampus rufipes*.

*Cladius rufipes*, *St.-Farg. Mon. Tenth.* p. 58, n. 167 (1823); *Thoms.*

*Hym. Scand.* i. p. 72 (1871).

*Cladius uncinata*, *Hart. Blattw.* p. 176 (1837).

*Cladius uncinatus*, *Vollenh. Tijdschr. Ent.* iv. p. 84, pl. iv. (1861).

*Hab.* Central Europe.

<i>a-h.</i> ♂ ♀.	Britain.	J. F. Stephens.
<i>i-p.</i> ♂ ♀. (As <i>T. pallipes</i> .)	Britain.	J. F. Stephens.
<i>q, r.</i> ♂.	Britain.	
<i>s-v.</i> ♂ ♀. (As <i>T. morio</i> .)	Britain.	J. F. Stephens.
<i>w-bb.</i> ♂ ♀.	Germany.	J. F. Ruthe.

4. *Trichiocampus garbiglietti*.

*Trichiocampus garbiglietti*, *Costa, Ann. Mus. Nap.* ii. p. 103 (1864).

? *Nematus pallipes*, *St.-Farg. Mon. Tenth.* p. 62, n. 182 (1823).

? *Cladius pallipes*, *Guér. Ic. R. Anim., Ins.* pl. lxiv, fig. 6 (1829).

*Hab.* Italy.

5. *Trichiocampus morio*.

*Cladius morio*, *St.-Farg. Mon. Tenth.* p. 58, n. 168 (1823).

*Cladius radiatus*, *Hart. Blattw.* p. 176 (1837); *Thoms. Hym. Scand.* i. p. 72 (1871).

*Hab.* Central Europe.

<i>a-c.</i> ♂ ♀.	Britain.	J. F. Stephens.
<i>f-h.</i> ♂ ♀.	Britain.	
<i>i-n.</i> ♂ ♀.	Germany.	J. F. Ruthe.

6. *Trichiocampus æneus*.

*Cladius æneus*, *Zadd. Besch. Blattw. Preuss.* p. 12, fig. 4 (1859).

*Hab.* Prussia.

7. *Trichiocampus drewseni*.

*Cladius drewseni*, *Thoms. Hym. Scand.* i. p. 73 (1871).

*Hab.* Europe.

\* A variety with the pectus wholly luteous, but not agreeing with *St.-Fargeau's* description of his *Nematus pectoralis*.

a. ♀.	Germany.	J. F. Ruthe.
b. ♀.	Europe.	

### 8. *Trichiocampus discrepans*.

*Cladius discrepans*, *Costa, Faun. Nap., Tentr.* p. 11, pl. lxiii. fig. 3 (antenna) (1859).

*Hab.* Naples.

### 51. PRIOPHORUS.

*Priophorus*, *Dahlb. Conspect. Tenthr.* p. 4 (1835); *Hart. Blattw.* p. 178 (1837).

#### 1. *Priophorus padi*.

*Tenthredo padi*, *Linn. Faun. Succ.* p. 390, n. 1544 (1861).

*Cladius padi*, *Thoms. Hym. Scand.* i. p. 75, n. 5 (1871).

*Tenthredo albipes*, *Fallén, Vetensk. Handl.* xxix. p. 110, n. 47 (1808).

*Cladius immunis*, *Steph. Ill. Brit. Ent., Mand.* vii. p. 24, n. 3 (1837).

*Cladius albipes*, *Hart. Blattw.* p. 178 (1837); *Vollenh. Tijdschr. Ent.* vi. p. 74, pl. v. (1863).

*Cladius pilicornis*, *Curt. Brit. Ent.* x. pl. cccclvii. (1833).

*Nematus crassicornis et melanostigma*, *Steph. Ill. Brit. Ent., Mand.* vii. pp. 28, 35, nn. 3, 36 (1835).

*Hab.* Central Europe.

a-p. ♂ ♀. (As <i>C. pilicornis</i> .)	Britain.	J. F. Stephens.
q-w. ♂ ♀. (Types of <i>C. immunis</i> .)	Britain.	J. F. Stephens.
x-bb. ♂ ♀. (As <i>C. europes</i> .)	Britain.	J. F. Stephens.
cc-ee. ♂ ♀. (As <i>C. atra</i> .)	Britain.	J. F. Stephens.
ff-ii. ♂ ♀.	West of England.	W. E. Leach.
kk. ♀.	Département of Aude.	Rev. A. E. Eaton.
ll. ♀.	Aix-la-Chapelle.	Prof. Foerster.
mm-eee. ♂ ♀.	Germany.	J. F. Ruthe.

#### 2. *Priophorus brullei*.

*Priophorus brullei*, *Dahlb. Clavis Hym.* p. 20, n. 14 (1835).

*Cladius brullei*, *Thoms. Hym. Scand.* i. p. 75, n. 7 (1871).

*Cladius brullæi*, *Cameron, Proc. N.H. Soc. Glasg.* iii. p. 26 (1876).

*Hab.* Sweden; Scotland.

#### 3. *Priophorus tener*.

*Cladius tener*, *Zadd. Besch. Blattw. Preuss.* p. 11 (1859).

*Hab.* Prussia.

4. *Priophorus tristis*.

*Cladius tristis*, Zadd. *Beschr. Blattw. Preuss.* p. 11 (1859).

*Hab.* Prussia.

5. *Priophorus simplicicornis*.

*Cladius simplicicornis*, Norton, *Trans. Amer. Ent. Soc.* ii. p. 367 (1869).

*Hab.* Maine.

6. *Priophorus æqualis*.

*Cladius æqualis*, Norton, *Trans. Amer. Ent. Soc.* iv. p. 78 (1872).

*Hab.* Connecticut.

## 52. PRISTIPHORA \*.

*Pristiphora*, sect. 3, St.-Farg. *Mon. Tenth.* p. 61 (1823); *Hart. Blattw.* p. 183, note (1837).

1. *Pristiphora varipes*.

*Pristiphora varipes*, St.-Farg. *Mon. Tenth.* p. 61, n. 178 (1823)  
*Hart. Blattw.* p. 183 (1837).

*Hab.* France.

## 53. CAMPONISCUS.

*Camponiscus*, Newm. *Ent.* iv. p. 215 (1869).  
*Leptopus*, *Hart. Blattw.* p. 184 (1837), *nom. præocc.*

1. *Camponiscus luridiventris*.

*Tenthredo luridiventris*, Fallén, *Vetensk. Handl.* xxix. p. 115 (1808).  
*Leptocercus luridiventris*, Thoms. *Hym. Scand.* i. p. 78 (1871).  
*Nematus hypogastricus*, *Hart. Blattw.* p. 184 (1837); *Herr.-Schäff. Deuts. Jd. Ins.* Heft 104 (1839).  
*Leptopus rufipes*, Forst. *Verh. Ver. Rheinl.* xi. p. 276 (1854).  
*Camponiscus healei*, Newm. *Ent.* iv. p. 215 (1869).

*Hab.* Central Europe.

a. ♀.

Germany.

J. F. Ruthe.

\* *Pristiphora*, Latr., is merely a section of *Nematus*, founded on the presence of three instead of four submarginal cells, a character which is not constant in *Nematus*, even in the same species. St.-Fargeau extended it to include *Evura*; but it is now restricted provisionally to a species with very remarkable neuration, which has not been seen since it was first described. When rediscovered, it will require a new generic name; for *Pristiphora*, as already explained, is inadmissible.

## 54. EPILACTUS.

*Epilactus*, Först. *Verh. Ver. Rheinl.* xi. p. 435 (1854).

1. *Epilactus præcox*.

*Epilactus præcox*, Först. *Verh. Ver. Rheinl.* xi. p. 435 (1854).

*Hab.* Aix-la-Chapelle.

## 55. CRÆSUS.

*Cræsus*, Leach, *Zool. Misc.* iii. p. 129 (1817); *Hart. Blattw.* p. 124 (1837); Norton, *Trans. Amer. Ent. Soc.* i. p. 83 (1867).

1. *Cræsus septentrionalis*.

*Tenthredo septentrionalis*, Linn. *Syst. Nat.* i. p. 537, n. 24 (1758); *Faun. Suec.* p. 393 (1761); Panz. *Faun. Germ.* Heft 64, pl. xi. (1799).

*Tenthredo largipes*, Retz. *Gen. Sp. Ins.* p. 73, n. 309 (1783).

*Cræsus septentrionalis*, Curt. *Brit. Ent.* i. pl. xvii. (1823); Costa, *Faun. Nap., Tentr.* p. 12, pl. lxiii. fig. 45 (1859).

*Nematus septentrionalis*, Hart. *Blattw.* p. 184, n. 2 (1837); Vollenh. *Tijdschr. Ent.* ii. p. 74, pl. v. (1858); *Zudd. Schrift. Königsb.* xv. p. 54 (1874).

*Nematus latierus*, De Villaret, *Ann. Soc. Ent. Fr.* i. p. 307, pl. xi. fig. 7 (1832).

*Hab.* Europe.

*a-m.* ♂ ♀.  
*n, o.* ♂ ♀.

Britain.  
Britain.

J. F. Stephens.

2. *Cræsus latipes*.

*Nematus latipes*, De Villaret, *Ann. Soc. Ent. Fr.* i. p. 306, pl. xi. figs. 4-6 (1832); Vollenh. *Tijdschr. Ent.* x. p. 174, pl. viii. (1867); *Zudd. Schrift. Königsb.* xv. p. 56 (1874).

*Hab.* Central Europe.

*a-c.* ♀.

Germany.

J. F. Ruthe.

3. *Cræsus brischkii*.

*Nematus brischkii*, *Zudd. Schrift. Königsb.* xv. p. 57 (1874).

*Hab.* Oliva.

4. *Cræsus varus*.

*Nematus varus*, De Villaret, *Ann. Soc. Ent. Fr.* i. p. 306, pl. xi. fig. 8 (1832); Vollenh. *Tijdschr. Ent.* vi. p. 76, pl. vi. (1863); *Zudd. Schrift. Königsb.* xv. p. 58 (1874).

*Hab.* Europe: North America.

<i>a, c</i> , ♂.	Britain.	J. F. Stephens.
<i>d</i> , ♂.	Britain.	
<i>e</i> , ♀, ♂.	Germany.	J. F. Ruthe.
<i>m</i> , ♂.	Nova Scotia.	Lieut. Redman.

5. *Cræsus stephensii*.

*Cræsus stephensii*, *Nortm. Ent. Mag.*, iv, p. 261 (1837).

*Hab.* Ireland\*.

6. *Cræsus latitarsus*.

*Cræsus latitarsus*, *Nortm. Proc. Ent. Soc. Phil.*, i, p. 199 (1862);  
*id. Trans. Amer. Ent. Soc.*, i, p. 84 (1867).

*Hab.* United States.

7. *Cræsus laticulus*.

*Cræsus laticulus*, *Nortm. Trans. Amer. Ent. Soc.*, ii, p. 368 (1869).

*Hab.* United States.

## 56. NEMATUS.

*Nematus*, *Pac. Ent. Geogr.*, Heft xc, pl. x, (1895); *Jur. Hym.*, p. 59

(1897).

Mosca\*, *Leach*, *Zool. Misc.*, iii, p. 126 (1817).

A. *Exspecto Species*.1. *Nematus cinctus*.

*Nematus cinctus*, *Nortm. Ent. Mag.*, iv, p. 259 (Jan. 1837).

*Nematus cinctus*, *Hort. Batten.*, p. 187 (1837); *Zool. Schrift.*  
*Königsb.*, xv, p. 69 (1870).

*Hab.* Central Europe.

<i>a</i> , ♀.	Britain.	J. F. Stephens.
<i>b, c</i> , ♂.	Germany.	J. F. Ruthe.

2. *Nematus quercus*.

*Nematus quercus*, *Hort. Blatt.*, p. 188 (1837); *Thoms. Hym. Scand.*  
i, p. 95 (1871); *Zool. Schrift. Königsb.*, xvi, p. 61 (1876).

*Tempered chalcids*, *Zool. Trans. Linn.*, p. 553, n. 53 (1838).

*Hab.* Central Europe.

<i>a, b</i> , ♀.	Germany.	J. F. Ruthe.
<i>c</i> , ♀.	Sweden.	

\* Possibly an erroneous locality. It may be identical with one of Norton's American species, on both of which the abdomen appears to be black.

\* This genus appears to have been founded upon some small species of *Nematus*, which Leach mistook for *Fenusa kufneri*, King.

3. *Nematus anderschi*.

*Nematus anderschi*, *Zadd. Schrift. Königsb.* xvi. p. 62 (1875).

*Hab.* Tilsit?

4. *Nematus pallidiventris*.

*Tenthredo pallidiventris*, *Fallén, Vetensk. Handl.* xxix. p. 120, n. 63 (1808).

*Nematus pallidiventris*, *Thoms. Öfr. Vet.-Akad. Förh.* xix. p. 110, n. 35 (1862); *id. Hym. Scand.* i. p. 110 (1871).

*Hab.* Sweden.

5. *Nematus punctifrons*.

*Nematus punctifrons*, *Thoms. Hym. Scand.* i. p. 111 (1871).

*Hab.* Sweden, Germany.

a-f. ♂ ♀. Germany. J. F. Ruthe.

6. *Nematus fumipennis*.

*Nematus fumipennis*, *Thoms. Hym. Scand.* i. p. 112 (1871).

*Hab.* Sweden.

7. *Nematus filicornis*.

*Nematus filicornis*, *Thoms. Öfr. Vet.-Akad. Förh.* xix. p. 625, n. 23 (1862); *id. Hym. Scand.* i. p. 113 (1871).

*Hab.* France, Sweden.

8. *Nematus obductus*.

*Nematus obductus*, *Hart. Blattw.* p. 201 (1837); *Thoms. Öfr. Vet.-Akad. Förh.* xix. p. 626, n. 25 (1862); *id. Hym. Scand.* i. p. 114 (1871).

? *Pristiphora duplex*, *Steph. Ill. Brit. Ent. Mand.* vii. p. 26 (1835).

*Hab.* Central Europe.

a. ♀. Britain. J. F. Stephens.

9. *Nematus conductus*.

*Nematus conductus*, *Ruthe, Stett. ent. Zeit.* xx. p. 305 (1859).

*Nematus graminis*, *Cameron, Ent. M. Mag.* x. p. 221 (1874).

*Hab.* North Europe.

a-d. ♀. Britain. J. F. Stephens.

e. ♀. Germany. J. F. Ruthe.

10. *Nematus lucidus*.

*Tenthredo lucida*, *Panz. Faun. Germ.* Heft 82, pl. x. (1801).

*Nematus lucida*, *Hart. Blattw.* p. 187 (1837); *Zadd. Schrift. Königsb.* xvi. p. 63 (1876).

*Nematus cinctus*, *St.-Farg. Mon. Tenth.* p. 66, n. 198 (1823).

*Nematus lucidus*, *Costa, Faun. Nap., Tentr.* p. 14, pl. lxiii. fig. 6 (1850).

*Hab.* Europe.

*a-e.* ♂ ♀.

Britain.

J. F. Stephens.

*f-i.* ♂ ♀.

Britain.

### 11. *Nematus insignis*.

*Nematus insignis*, *Hart. Stett. ent. Zeit.* i. p. 22, n. 6 (1840); *Thoms. Hym. Scand.* i. p. 121 (1871); *Zadd. Schrift. Königsb.* xvi. p. 65 (1876).

*Hab.* Silesia, Sweden.

### 12. *Nematus princeps*.

*Nematus princeps*, *Zadd. Schrift. Königsb.* xvi. p. 65 (1876).

*Hab.* East Germany, Finland.

### 13. *Nematus histrio*.

*Nematus histrio*, *St.-Farg. Mon. Tenth.* p. 63, n. 185 (1823); *Herr.-Schaff. Deutschl. Insect.* Heft 164 (1839); *Zadd. Schrift. Königsb.* xvi. p. 67 (1876).

*Nematus rufescens*, *Hart. Blattw.* p. 191 (1837); *Thoms. Hym. Scand.* i. p. 130 (1871).

*Hab.* Europe.

*a-e.* ♂ ♀.

Germany.

J. F. Ruthe.

*f.* ♀.

### 14. *Nematus longiserra*.

*Nematus longiserra*, *Thoms. Gefr. Vet.-Akad. Förh.* xix. p. 632, n. 39 (1862); *id. Hym. Scand.* i. p. 128 (1871); *Zadd. Schrift. Königsb.* xvi. p. 68 (1876).

*Hab.* North Europe.

### 15. *Nematus nigratus*.

*Tenthredo nigrata*, *Retz. Gen. Sp. Ins.* p. 73, n. 310 (1783).

*Nematus melano-stermus*, *St.-Farg. Mon. Tenth.* p. 65, n. 190 (1823).

*Hab.* Europe.

### 16. *Nematus scabrivalvis*.

*Nematus scabrivalvis*, *Thoms. Hym. Scand.* i. p. 132 (1871).

*Hab.* Sweden.

### 17. *Nematus brachycercus*.

*Nematus brachycercus*, *Hart. Stett. ent. Zeit.* i. p. 25, n. 47 (1840).

*Nematus scotoirotus*, *Forst. Verh. Ver. Rheinl.* xvi. p. 310, pl. v. fig. 24 (1854).

*Hab.* Germany.

18. *Nematus hæmorrhoidalis*.

*Nematus hæmorrhoidalis*, *Spin. Ins. Lig.* ii. p. 20, pl. iv. fig. 15 (1808).

*Nematus nigricornis fallax, vittatus, tæniatus, et humeralis*, *St.-Farg. Mon. Tenthr.* pp. 63-66 (1823).

*Tenthredo capree*, *Fall. Vetensk. Handl.* xxix. p. 121, n. 64 (1808).

*Nematus striatus*, *Hart. Blattw.* p. 191 (1837); *Thoms. Hym. Scand.* i. p. 131 (1871).

*Nematus melanoleucus*, *Hart. Stett. ent. Zeit.* i. p. 27, n. 88 (1840); ? *Gimm. Arb. Nat. Riga*, i. p. 48 (1848).

*Nematus variabilis*, *Tischb. Stett. ent. Zeit.* vii. p. 78 (1846).

*Nematus squalidus*, *Ev. Bull. Mosc.* xx. p. 21 (1847).

*Nematus incanus*, *Först. Verh. Ver. Rheinl.* xi. p. 302, pl. v. fig. 18 (1854).

*Nematus fallax*, *Zadd. Schrift. Königsb.* xvi. p. 69 (1876).

*Hab.* Europe.

a. ♂. (As <i>N. pavidus</i> .)	Britain.	J. F. Stephens.
b. ♀. (As <i>N. oblitus</i> .)	Britain.	J. F. Stephens.
c-h. ♂ ♀. (As <i>N. capree</i> .)	Britain.	J. F. Stephens.
i. ♀.	Scotland.	P. Cameron, Esq.
k-aa. ♂ ♀.	Germany.	J. F. Ruthe.

19. *Nematus segmentarius*.

*Nematus segmentarius*, *Först. Verh. Ver. Rheinl.* xi. p. 283, pl. iv. fig. 5 (1854).

*Hab.* Aix-la-Chapelle.

20. *Nematus amentorum*.

*Nematus amentorum*, *Först. Verh. Ver. Rheinl.* xi. p. 332, pl. vii. fig. 42 (1854).

*Hab.* Crefeld.

21. *Nematus geniculatus*.

*Nematus geniculatus*, *Hart. Stett. ent. Zeit.* i. p. 26, n. 62 (1840).

*Hab.* Germany.

22. *Nematus einersbergensis*.

*Nematus einersbergensis*, *Hart. Stett. ent. Zeit.* i. p. 26, n. 63 (1840); *André, Hym.* i. p. 139 (1880).

*Hab.* Germany.

23. *Nematus mœrens*.

*Nematus mœrens*, *Först. Verh. Ver. Rheinl.* xi. p. 294, pl. v. fig. 12 (1854).

*Hab.* Aix-la-Chapelle.

24. *Nematus schmidtii*.

*Nematus schmidtii*, *Annales Sci. Nat. Ent. Zeit.* v. p. 37 (1844).  
*Hab.* Riga.

25. *Nematus apicalis*.

*Nematus apicalis*, *Horst. Natur.* p. 201 (1837).  
*Hab.* Germany; Scotland.

26. *Nematus decipiens*.

*Nematus decipiens*, *First Ann. Phil. Zool. Ver. Rheinl.* xi. p. 279,  
 pl. iv. fig. 2 (1834).  
*Hab.* Aix-la-Chapelle.

27. *Nematus confusus*.

*Nematus confusus*, *First Ann. Phil. Zool. Rheinl.* xi. p. 280, pl. iv. fig. 3  
 (1834).  
*Hab.* Aix-la-Chapelle.

28. *Nematus variator*.

*Nematus variator*, *First Ann. Phil. Zool.* xv. p. 308 (1839); *Zool.*  
*Societ. Königl. Preuss.* p. 73 (1839).  
*Hab.* England, Prussia, N. I. Germany.

29. *Nematus incertus*.

*Nematus incertus*, *Horst. Natur.* p. 201 (*Sci. Nat. Ent. Zeit.* i. p. 26,  
 fig. 10 (1830); *Ann. Phil. Zool.* p. 300 (1839)).  
*Hab.* Germany; France.

30. *Nematus brachyotus*.

*Nematus brachyotus*, *First Ann. Phil. Zool. Rheinl.* xi. p. 295, pl. v.  
 fig. 1 (1834).  
*Hab.* Aix-la-Chapelle.

31. *Nematus subequalis*.

*Nematus subequalis*, *First Ann. Phil. Zool. Rheinl.* xi. p. 305, pl. v.  
 fig. 2 (1834).  
*Hab.* Aix-la-Chapelle.

32. *Nematus anomalopterus*.

*Nematus anomalopterus*, *First Ann. Phil. Zool. Rheinl.* xi. p. 308, pl. v.  
 fig. 22 (1834).  
*Hab.* Aix-la-Chapelle.

33. *Nematus brevicornis*.

*Nematus brevicornis*, Först. (nec Thoms.) *Verh. Ver. Rheinl.* xi. p. 335, pl. vii. fig. 44 (1854).  
*Nematus foersteri*, André, *Hym.* i. p. 152 (1880).

*Hab.* Aix-la-Chapelle.

34. *Nematus capreæ*.

*Tenthredo capreæ*, Panz. (nec Linn.) *Faun. Germ.* Heft lxx. pl. viii. (1799).  
*Nematus capreæ*, Zadd. *Schrift. Königsb.* xvi. p. 75 (1876).  
*Nematus clitellatus*, St.-Farg. *Mon. Tenth.* p. 62, n. 183 (1823).  
*Nematus pallicercus*, Hart. *Blattw.* p. 190 (1837).  
*Nematus griseus et continuus*, Eversm. *Bull. Mosc.* xx. pp. 18, 19 (1847).  
*Nematus trisignatus et circumscriptus*, Först. *Verh. Ver. Rheinl.* xi. pp. 292, 301, pl. v. figs. 11, 17 (1854).

*Hab.* Europe.

96. *Nematus gelidus*.

(Plate VII. fig. 10.)

Exp. al. 8 lin., long. corp. 4 lin.

Deep black, shining; sides of pectus punctuated and dull; (vertex, prothorax, and front and back of the sides of pectus dusted

with pollen in the type.) Legs testaceous; coxæ, trochanters, and basal half of the femora beneath black. Nervures brown; costa and stigma pale yellow.

Described from one male specimen, ticketed "*N. crassus*, Fall.;" but this species is described as having a black stigma, not to mention other differences.

*Hab.* Spitzbergen.

*Nematus anglicus*, *Cameron, Ent. M. Mag.* xiii. p. 173 (1877).

Exp. al. 4 lin., long. corp. 2 lin.

Black, shining; face, shoulders, tegulae, and legs pale testaceous; hind femora black in the middle; tips of hind tibiae and hind tarsi black; head a little testaceous behind the eyes; hind tarsi about as long as the tibiae; antennae slender, nearly as long as the body, third joint scarcely longer than fourth. Wings clear hyaline, with brown nervures; stigma white, smoky yellow on the outside.

\* "Bred from the bean-shaped galls on the leaves of the willow."—*MS. note.*

This species stands in the British collection as *Euura galle*, Newm.; but it differs from Newman's description both generically and specifically, for it has four submarginal cells instead of three, and the legs are not entirely pale.

*Hab.* England; Germany.

313. *Nematus calais*.

(Plate VII. fig. 11.)

*Exp. al.* 8 lin., long. corp. 4 lin.

Head and thorax black, finely punctured; pleura and pectus shining; abdomen testaceous, the two last segments blackish; legs testaceous, four front femora blackish at base, intermediate tibiæ with a dark line above; hind tibiæ and tarsi blackish, the former rather widened and flattened. Wings hyaline, with picuous stigma and nervures; fore wings clouded in the middle, and with apparently only three submarginal cells, the two first being divided by a white nervule.

*Hab.* Arctic America.

*Hab.* Unalashka.

345. *Nematus trifurcatus*.

(Plate VII. fig. 17.)

Exp. al. 8 lin., long. corp. 4 lin.

Testaceous, antennæ black, a large square black spot on vertex; three large black spots in front and on the sides of the thorax, sometimes nearly confluent; hinder half of the scutellum black; all the segments of the abdomen except the last (beyond which the black tips of the saws and sheaths project) are more or less broadly banded with purplish black in the middle; sides and undersurface

testaceous; pectus black in the middle: a black line down the hind legs. Wings hyaline; nervures piceous; stigma yellowish; three submarginal cells.

This species appears to be allied to *N. crassus*, Esch. (*obtusus*, Kirb.), from Alaska.

*Hab.* Hudson's Bay.

### 1. *Mesoneura verna.*

*Tenthredo* (*Allantus*) *verna*, *Klug, Berl. Mag.* viii. p. 55, n. 21 (1818).

- Tenthredo punctigera*, *St.-Farg. Mon. Tenth.* p. 160 (1823); *Faun. Franç.* p. 54, n. 97, pl. vii. fig. 6.  
*Selandria biloba*, *Steph. Ill. Brit. Ent., Mand.* vii. p. 54 (1835).  
*Dineura opaca*, *Hart. Blattw.* p. 229 (1837).  
*Dineura dorsalis*, *Först. Stett. ent. Zeit.* v. p. 263 (1844).  
*Nematus opacus*, *Thoms. Hym. Scand.* i. p. 81 (1871).  
*Selandria labialis*, *Brullé, Expéd. Scient. de Morée*, iii. (1) pt. 2, p. 393, n. 872 (1832).

*Hab.* Europe.

a. ♀.	Britain.	J. F. Stephens.
b. ♀. (Type of <i>S. biloba</i> .)	Britain.	J. F. Stephens.
c-g. ♀.	Germany.	J. F. Ruthe.

### 2. *Mesoneura pallipes*.

*Dineura pallipes*, *Hart. Blattw.* p. 229 (1837).

*Hab.* Harz.

### 3. *Mesoneura parva*.

*Dineura parvus*, *Nort. Trans. Amer. Ent. Soc.* i. p. 241 (1867).

*Hab.* Connecticut.

### 4. *Mesoneura albipes*.

*Mesoneura albipes*, *Cress. Trans. Amer. Ent. Soc.* viii. p. 11 (1880).

*Hab.* Nevada.

### 5. *Mesoneura obtusa*.

*Tenthredo* (*Allantus*) *obtusa*, *Klug, Berl. Mag.* viii. p. 55, n. 20 (1818).

*Hab.* Georgia.

### 6. *Mesoneura* (?) *varinervia*.

*Tenthredo varinervia*, *Spinola, Gay's Fauna Chilena*, vi. p. 558 (1851).

*Hab.* Chili.

a. ♀.	Chili*.
-------	---------

## Subfamily VII. SELANDRIINÆ.

### 62. ZARCA.

*Zarca*, *Cameron, Trans. Ent. Soc. Lond.* 1878, p. 142.

#### 1. *Zarca apicalis*.

*Zarca apicalis*, *Cameron, Trans. Ent. Soc. Lond.* 1878, p. 143.

*Hab.* Brazil.

\* Differs from *Mesoneura* in having only one inner cell on the hind wings instead of two.

63. **BLENNOCAMPA\***.

*Blennocampa*, *Hart. Blattw.* p. 266 (1837).

A. *European Species.*1. *Blennocampa nana.*

*Tenthredo* (*Allantus*) *nana*, *Klug, Berl. Mag.* viii. p. 72, n. 54 (1818).

*Hab.* Central Europe.

*a-h.* ♀. Germany. J. F. Ruthe.

2. *Blennocampa waldheimii.*

*Tenthredo* (*Blennocampa*) *waldheimii*, *Gimm. Arbeit. nat. Ver. Riga*, i. p. 51 (1848).

*Hab.* Germany, Livonia.

*a.* ♀. Aix-la-Chapelle†. Prof. A. Förster.

3. *Blennocampa fuscula.*

*Tenthredo* (*Allantus*) *fuscula*, *Klug, Berl. Mag.* viii. p. 70, n. 50 (1818).

*Tenthredo* (*Allantus*) *pusilla*, *Klug, Berl. Mag.* viii. p. 71, n. 52 (1818); *Vollenh. Tijdschr. Ent.* iv. p. 79, pl. iii. (1861).

*Hab.* Europe.

*a-d.* ♂ ♀. Britain. J. F. Stephens.  
*e.* ♀. (As *B. alternipes*.) Britain. J. F. Stephens.  
*f-l.* ♀. (As *B. cinereipes*.) Britain. J. F. Stephens.  
*m, n.* ♀. (Ditto.) Britain.  
*o-z.* ♂ ♀. Germany. J. F. Ruthe.

4. *Blennocampa tenuicornis.*

*Tenthredo* (*Allantus*) *tenuicornis*, *Klug, Berl. Mag.* viii. p. 68, n. 45 (1818).

*Hab.* Königsberg.

\* The genera allied to *Blennocampa* will require a thorough revision when better known. They are wholly artificial at present, the males of many species being without inner cells on the hind wings, and thus belonging to *Blennocampa*, while the females have one, and would thus, unless the sexes were accurately known, fall into *Monophadnus*.

† This species was originally described from Livonia. The specimen which I refer to it is ticketed *Blennocampa grandicornis*, Först., but has not been described under that name, so far as I am aware.

5. *Blennocampa betuleti*.

*Tenthredo* (*Allantus*) *betuleti*, *Klug, Berl. Mag.* viii. p. 73, n. 57 (1818).

*Hab.* Europe.

<i>a.</i> ♀.	Britain.	J. F. Stephens.
<i>b-f.</i> ♂ ♀.	Germany.	J. F. Ruthe.

6. *Blennocampa fuscus*.

*Tenthredo fusca*, *St.-Farg. Mon. Tenth.* p. 106, n. 301 (1823).

*Hab.* "In horto regio Fontis Bellandi."

7. *Blennocampa cerasi*.

*Tenthredo cerasi*, *Linna, Syst. Nat.* i. p. 557, n. 14 (1758); *Faun. Succ.* p. 391 (1761).

*Tenthredo flavipes*, *Schrank, Linn. Ins. Austr.* p. 340, n. 686 (1781).

*Tenthredo limcma*, *Ratz. Gen. Spec. Ins.* p. 73, n. 313 (1783).

*Tenthredo a thiops*, *Fabr. Ent. Syst.* ii. p. 121, n. 65 (1793); *Halt. Blattw.* p. 297 (1837).

*Tenthredo* (*Allantus*) *a thiops*, *Klug, Berl. Mag.* viii. p. 66, n. 41 (1818).

*Selandia atra*, *Steph. Ill. Brët. Ent., Mand.* vii. p. 52 (1835).

*Hab.* Europe.

<i>a.</i> ♀.	Britain.	J. F. Stephens.
<i>b.</i> ♀. (Type of <i>S. atra</i> .)	Britain.	J. F. Stephens.
<i>c.</i> ♀.	Britain.	T. R. Billups, Esq.
<i>d-t.</i> ♂ ♀.	Germany.	J. F. Ruthe.

8. *Blennocampa vernalis*.

*Tenthredo vernalis*, *Fourc. Ent. Par.* ii. p. 376, n. 40 (1785).

*Tenthredo ephippium*, *Panz. Faun. Germ.* H. ft. 52, pl. v. (1798).

*Tenthredo* (*Allantus*) *ephippium*, *Klug, Berl. Mag.* viii. p. 61, n. 32 (1818).

*Hab.* Europe.

<i>a-i.</i> ♀.	Britain.	J. F. Stephens.
<i>k.</i> ♀.	Britain.	
<i>l-t.</i> ♀.	Germany.	J. F. Ruthe.
<i>u.</i> ♀.	Sweden?	

9. *Blennocampa fuliginosa*.

*Tenthredo fuliginosa*, *Schrank, Linn. Ins. Austr.* p. 334, n. 670 (1781).

*Tenthredo nigrita*, *Fabr. Syst. Piez.* p. 39, n. 47 (1804).

*Tenthredo caerulescens*, *Fourc. Ent. Par.* ii. p. 373, n. 30 (1785).

*Tenthredo* (*Allantus*) *fuliginosa*, *Klug, Berl. Mag.* viii. p. 64, n. 37 (1818).

*Tenthredo trichocera*, *St.-Farg. Mon. Tenth.* p. 81, n. 240 (1823).

? *Selandria geniculata*, *Steph. Ill. Brit. Ent., Mand.* vii. p. 49 (1835).

*Hab.* Europe.

<i>a-c.</i> ♀.	Britain.	J. F. Stephens.
<i>f-h.</i> ♀.	Britain.	
<i>i.</i> ♀. (Type of <i>S. geniculata</i> ?)	Britain*.	J. F. Stephens.
<i>k-bb.</i> ♂ ♀.	Germany.	J. F. Ruthe.

#### 10. *Blennocampa maura*.

*Tenthredo maura*, *Schrank, Fauna Boica*, ii. pt. 2, p. 248 (1802).

*Tenthredo* (*Allantus*) *alternipes*, *Klug, Berl. Mag.* viii. p. 67, n. 42 (1818).

*Hab.* Central Europe.

<i>a-d.</i> ♀.	Germany.	J. F. Ruthe.
----------------	----------	--------------

#### 11. *Blennocampa cinereipes*.

*Tenthredo* (*Allantus*) *cinereipes*, *Klug, Berl. Mag.* viii. p. 67, n. 43 (1818).

? *Selandria tibialis*, *Steph. Ill. Brit. Ent., Mand.* vii. p. 49 (1835).

*Hab.* Europe.

<i>a-e.</i> ♂ ♀.	Germany †.	J. F. Ruthe.
------------------	------------	--------------

#### 12. *Blennocampa subcana*.

*Selandria subcana*, *Zadd. Besch. Blattw.* p. 34 (1859).

*Blennocampa subcana*, *Cam. Ent. M. Mag.* xiv. p. 56 (1877).

*Hab.* Königsberg.

#### 13. *Blennocampa uncta*.

*Blennocampa uncta*, *Klug, Berl. Mag.* viii. p. 77, n. 63 (1818).

*Hab.* Central Europe.

#### 14. *Blennocampa humeralis*.

*Selandria humeralis*, *Vollenh. Tijdschr. Ent.* xii. p. 122 (1869).

*Hab.* Holland.

\* The description of this species is not sufficiently precise to enable me to assign the supposed type to it without hesitation.

† I cannot find the types of *S. tibialis*.

15. *Blennocampa elongatula*.

*Tenthredo* (*Allantus*) *elongatula*, *Klug, Berl. Mag.* viii. p. 214, n. 170 (1818).

? *Tenthredo cothurnata*, *St.-Farg. Mon. Tenth.* p. 106, n. 300 (1823).

*Hab.* Germany.

16. *Blennocampa lineolata*.

*Tenthredo* (*Allantus*) *lineolata*, *Klug, Berl. Mag.* viii. p. 76, n. 82 (1818).

*Selandria lineolata*, *Zadd. Besch. Blattw.* p. 32, fig. 14 (1859).

*Hab.* Britain; Germany.

17. *Blennocampa albipennis*.

*Selandria albipennis*, *Zadd. Besch. Blattw.* p. 33 (1859).

*Hab.* Königsberg.

18. *Blennocampa subserrata*.

*Blennocampa subserrata*, *Thoms. Op. Ent.* ii. p. 285, n. 22 (1870);  
*id. Hym. Scand.* i. p. 220, n. 25 (1871).

*Hab.* Sweden.

19. *Blennocampa albiventris*.

*Tenthredo* (*Allantus*) *albiventris*, *Klug, Berl. Mag.* viii. p. 52, n. 15 (1818).

*Hab.* Austria.

20. *Blennocampa sexpunctata*.

*Tenthredo sexpunctata*, *St.-Farg. Mon. Tenth.* p. 102, n. 287 (1823);  
*id. Faun. Franç.* p. 43, n. 67, pl. vii. fig. 1.

*Hab.* Paris.

21. *Blennocampa assimilis*.

*Hylotoma assimilis*, *Fallén, Vetensk. Handl.* xxviii. p. 204, n. 12 (1807).

*Tenthredo* (*Allantus*) *hyalina*, *Klug, Berl. Mag.* viii. p. 58 n. 25 (1818).

*Hab.* Europe.

<i>a-c.</i> ♀.	Britain.	J. F. Stephens.
<i>d.</i> ♀. (As <i>B. versicolor</i> .)	Britain.	
<i>e-m.</i> ♀.	Germany.	J. F. Ruthe.

22. *Blennocampa tenella*.

*Tenthredo* (*Allantus*) *tenella*, *Klug, Berl. Mag.* viii. p. 59, n. 29 (1818).

*Blennocampa albida*, *Thoms. Op. Ent.* ii. p. 282, n. 13 (1870).  
*Blennocampa tenuicornis*, *Thoms. Hym. Scand.* i. p. 209 (1871).

*Hab.* Europe.

a-d. ♂ ♀.

Germany.

J. F. Ruthe.

23. *Blennocampa recta*.

*Blennocampa recta*, *Thoms. Hym. Scand.* i. p. 210 (1871).

*Hab.* Sweden.

24. *Blennocampa lanceolata*.

*Blennocampa lanceolata*, *Thoms. Op. Ent.* ii. p. 283, n. 16 (1870);  
*id. Hym. Scand.* i. p. 211, n. 9 (1871).

*Hab.* South Sweden.

25. *Blennocampa bicolor*.

*Blennocampa bicolor*, *Tischb. Stett. ent. Zeit.* xiii. p. 107 (1852).

*Hab.* Hungary.

26. *Blennocampa croceipes*.

*Blennocampa croceipes*, *Costa, Ann. Mus. Nap.* ii. p. 104 (1864).

*Hab.* Turin.

27. *Blennocampa tiliæ*.

*Blennocampa tiliæ*, *Kaltenbach, Pflanzenfeinde*, p. 78 (1872).

*Hab.* Germany.

28. *Blennocampa* (?) *spretæ*.

*Tenthredo spretæ*, *St.-Farg. Mon. Tenth.* p. 78, n. 232 (1823).

*Hab.* France.

29. *Blennocampa* (?) *fraxini*.

*Tenthredo fraxini*, *St.-Farg. Mon. Tenth.* p. 106, n. 302 (1823).

*Hab.* Paris.

B. *West-Asiatic Species.*

30. *Blennocampa lugens*.

*Blennocampa lugens*, *André, Spec. Hym.* i. p. 583 (1881); *Annales de la Soc. Ent. de France* (6), i. p. 353 (1881).

*Hab.* Beyrout.

31. *Blennocampa strigata*.

*Blennocampa strigata*, *André, Spec. Hym.* i. p. 584 (1881); *Annales de la Soc. Ent. de France* (6), i. p. 352 (1881).

*Hab.* Beyrout.

C. *North-American Species (including Mexico).*32. *Blennocampa carbonaria.*

*Blennocampa carbonaria*, *Cress. Trans. Amer. Ent. Soc.* viii. p. 12 (1880).

*Hab.* Georgia.

33. *Blennocampa floridana.*

*Selandria floridana*, *Cress. Trans. Amer. Ent. Soc.* viii. p. 12 (1880).

*Hab.* Florida.

34. *Blennocampa parva.*

*Selandria parva*, *Cress. Trans. Amer. Ent. Soc.* viii. p. 12 (1880).

*Hab.* Colorado.

35. *Blennocampa pygmaea.*

*Tenthredo pygmaea*, *Say, Long's 2nd Exped.* ii. p. 318 (1824).

*Selandria vitis*, *Harr. Ins. Mass.* p. 378 (1841); *Norton, Proc. Bost. Soc.* viii. p. 219 (1861); *id. Trans. Amer. Ent. Soc.* i. p. 245 (1867).

*Hab.* United States.

a. ♀.

36. *Blennocampa inhabilis.*

*Selandria inhabilis*, *Norton, Proc. Bost. Soc.* viii. p. 220 (1861); *id. Trans. Amer. Ent. Soc.* i. p. 246 (1867).

*Hab.* Massachusetts.

37. *Blennocampa sumichrasti.*

*Selandria sumichrasti*, *Norton, Trans. Amer. Ent. Soc.* iv. p. 82 (1872).

*Hab.* Mexico.

38. *Blennocampa bipartita.*

*Selandria bipartita*, *Cress. Trans. Amer. Ent. Soc.* viii. p. 12 (1880).

*Hab.* Texas.

39. *Blennocampa capitalis.*

*Selandria capitalis*, *Norton, Trans. Amer. Ent. Soc.* i. p. 247 (1867).

*Hab.* Brooklyn.

D. *South-American Species.*40. *Blennocampa obscura.*

(Plate VIII. fig. 1.)

Exp. al. 4 lin., long. corp. 2 lin.

Black; fore wings smoky hyaline; hind wings clearer, nervures piceous.

*Hab.* Santarem.

*α, β. ♂.* (Types of species.) Santarem. H. W. Bates, Esq.

#### 41. *Blennocampa appendiculata.*

*Tenthredo appendiculata, Spinola, Mem. Accad. Torino, ser. 2, vol. xiii. p. 26 (1853).*

*Hab.* Pará.

#### 42. *Blennocampa rubricollis.*

*Tenthredo rubricollis, Spinola, Mem. Accad. Torino, ser. 2, vol. xiii. p. 26 (1853).*

*Hab.* Pará.

#### 43. *Blennocampa cognata.*

*Tenthredo cognata, Spinola, Gay's Fauna Chilena, vi. p. 558 (1851).*

*Hab.* Chili.

#### 44. *Blennocampa leucona.*

*Tenthredo leuconus, Spinola, Gay's Fauna Chilena, vi. p. 557 (1851).*

*Hab.* Chili.

### 64. PHYMATOCERA.

*Phymatocera, Dalhb. Consp. Tenthr. p. 4 (1835); Hart. Blattw. p. 276 (1837).*

*Pectinia, Brullé, Spec. Hym. iv. p. 664 (1846).*

*Blennocampa, div. i., Thoms. Hym. Scand. i. p. 205 (1871).*

#### 1. *Phymatocera aterrima.*

*Tenthredo fuliginosa, Fall. (nec Schrank) Vetensk. Handl. xxix. p. 109, n. 45 (1808).*

*Tenthredo (Allantus) aterrima, Klug, Berl. Mag. viii. p. 81, n. 70 (1818).*

*Phymatocera aterrima, Vollenh. Tijdschr. Ent. v. p. 55, pl. ii. (1862).*

*Selandria robinsoni, Curt. Ann. Nat. Hist. (2) vi. p. 393 (1850); id. Trans. Linn. Soc. xxi. p. 39, pl. v. (1852).*

*Hab.* Europe.

<i>a. ♀.</i>	Germany.	J. F. Ruthe.
<i>b. ♂.</i>	Munich.	H. Buchecker.

#### 2. *Phymatocera rudis.*

*Selandria rudis, Norton, Proc. Bost. Soc. viii. p. 221 (1861); id. Trans. Amer. Ent. Soc. i. p. 251 (1867).*

*Hab.* United States.

3. *Phymatocera nevadensis*.

*Selandria nevadensis*, *Cress. Trans. Amer. Ent. Soc.* viii. p. 13 (1880).

*Hab.* Nevada.

4. *Phymatocera montivaga*.

*Selandria montivaga*, *Cress. Trans. Amer. Ent. Soc.* viii. p. 13 (1880).

*Hab.* Nevada.

5. *Phymatocera rufula*.

*Phymatocera rufula*, *Norton, Proc. Bost. Soc.* viii. p. 221 (1861);  
*id. Trans. Amer. Ent. Soc.* i. p. 251 (1867).

*Hab.* Connecticut.

6. *Phymatocera fumipennis*.

*Selandria fumipennis*, *Norton, Proc. Bost. Soc.* viii. p. 222 (1861);  
*id. Trans. Amer. Ent. Soc.* i. p. 252 (1867).

*Hab.* United States.

*a, b.* ♀.

7. *Phymatocera nubilipennis*.

*Selandria nubilipennis*, *Norton, Trans. Amer. Ent. Soc.* i. p. 252 (1867).

*Hab.* Maine, Massachusetts.

8. *Phymatocera albicollis*.

*Selandria albicollis*, *Norton, Trans. Amer. Ent. Soc.* iv. p. 85 (1872).

*Hab.* Texas.

## 65. HOPLOCAMPA.

*Hoplocampa*, *Hart, Blattw.* p. 276 (1837).

1. *Hoplocampa testudinea*.

*Tenthredo* (*Allantus*) *testudinea*, *Klug, Berl. Mag.* viii. p. 60, n. 30 (1818).

*Hab.* Central Europe.

*a-c.* ♂ ♀.

Britain.  
North of England.

J. F. Stephens.  
W. E. Leach.

*d.* ♀.

2. *Hoplocampa apicaris*.

*Tenthredo apicaris*, *Fourcr. Ent. Par.* ii. p. 376, n. 38 (1785).

*Allantus ferrugineus*, *Panz. Faun. Germ.* Heft 90, pl. ix. (1805).

*Hylotoma ferruginea*, *Fabr. Syst. Piez.* p. 26, n. 24 (1804).

*Tenthredo* (*Allantus*) *brunnea*, *Klug, Berl. Mag.* viii. p. 53, n. 16 (1818).

*Hab.* Central Europe.

<i>a-e.</i> ♀.	Britain.	J. F. Stephens.
<i>d, e.</i> ♀. (As <i>H. plagiata</i> and <i>H. fulvicornis</i> .)	Britain.	J. F. Stephens.
<i>f-i.</i> ♂ ♀.	Germany.	J. F. Ruthe.
<i>k.</i> ♀.	Switzerland.	H. Buchecker.

### 3. *Hoplocampa brevis*.

*Tenthredo* (*Allantus*) *brevis*, *Klug, Berl. Mag.* viii. p. 53 (1818).

? *Tenthredo brevis*, *St.-Farg. Mon. Tenth.* p. 108, n. 312 (1823).

*Hab.* Central Europe.

<i>a-c.</i> ♀.	Germany.	J. F. Ruthe.
----------------	----------	--------------

### 4. *Hoplocampa plagiata*.

*Tenthredo* (*Allantus*) *plagiata*, *Klug, Berl. Mag.* viii. p. 56, n. 22 (1818).

? *Tenthredo pallida*, *St.-Farg. Mon. Tenth.* p. 105, n. 297 (1823).

*Hab.* Central Europe.

### 5. *Hoplocampa cratægi*.

*Tenthredo* (*Allantus*) *cratægi*, *Klug, Berl. Mag.* viii. p. 54, n. 18 (1818).

*Tenthredo verticata et luteola*, *St.-Farg. Mon. Tenth.* p. 108, n. 311, 313 (1823).

*Hab.* Central Europe.

<i>a-f.</i> ♀.	Britain.	J. F. Stephens.
<i>g, h.</i> ♂ ♀.	Germany.	J. F. Ruthe.
<i>i, k.</i> ♂.	Schleissheim.	H. Buchecker.

### 6. *Hoplocampa pallida*.

*Tenthredo pallida*, *Newm. Ent. Mag.* iv. p. 262 (1837).

*Tenthredo alpina*, *Zett. Ins. Lapp.* p. 339, n. 3 (1838).

*Hoplocampa alpina*, *Thoms. Op. Ent.* ii. p. 278, n. 4 (1870); *id. Hym. Scand.* i. p. 202, n. 5 (1871).

*Hab.* North Europe.

<i>a, b.</i> ♂ ♀.	Britain.	J. F. Stephens.
-------------------	----------	-----------------

### 7. *Hoplocampa pectoralis*.

*Hoplocampa pectoralis*, *Thoms. Hym. Scand.* i. p. 202 (1871).

*Hab.* North Europe.

<i>a.</i> ♀. (As <i>Blenn. melanocephala</i> .)	Britain.	J. F. Stephens.
-------------------------------------------------	----------	-----------------

8. *Hoplocampa fulvicornis*.

- Tenthredo fulvicornis*, *Panz. Faun. Germ.* Heft 82, pl. xiii. (1801).  
*Tenthredo* (*Allantus*) *rutilicornis*, *Klug, Berl. Mag.* viii. p. 54, n. 19 (1810).  
*Tenthredo parvula*, *St.-Farg. Mon. Tenth.* p. 107, n. 306 (1823); *id. Faun. Franç.* p. 49, n. 87, pl. vii. fig. 4.

*Hab.* Central Europe.

*a-k.* ♂ ♀.

Germany.

J. F. Ruthe.

9. *Hoplocampa chrysoorrhœa*.

- Tenthredo* (*Allantus*) *chrysoorrhœa*, *Klug, Berl. Mag.* viii. p. 60, n. 31 (1818).

*Hab.* Germany.

10. *Hoplocampa* (?) *hæmorrhoidalis*.

- Tenthredo hæmorrhoidalis*, *St.-Farg. Mon. Tenth.* p. 107, n. 305 (1823).

*Hab.* Paris.

11. *Hoplocampa xylostei*.

- Selandria xylostei*, *Giraud, Verh. z.-b. Wien*, xiii. p. 1297, pl. xxii. (1863).

*Hab.* Germany.

12. *Hoplocampa gallicola*.

- Hoplocampa gallicola*, *Cameron, Ent. M. Mag.* xiv. p. 156 (1877).

*Hab.* Devonshire.

13. *Hoplocampa fabricii*.

- Tenthredo fulvicornis*, *Fabr. (nec Panz.) Syst. Picz.* p. 38, n. 45 (1804).  
*Tenthredo* (*Allantus*) *fulvicornis*, *Klug, Berl. Mag.* viii. p. 51, n. 33 (1818).  
*Selandria fulvicornis*, *Vollenh. Tijdschr. Ent.* xxiii. p. 4, pl. i. (1880).

*Hab.* Germany.

14. *Hoplocampa haleyon*.

- Selandria haleyon*, *Nort. Proc. Bost. Soc.* viii. p. 222 (1861); *id. Trans. Amer. Ent. Soc.* i. p. 252 (1867).  
*Selandria flavicornis*, *Provancher, Nat. Canad.* x. p. 100 (1878).

*Hab.* United States.

15. *Hoplocampa montana*.

*Monophadnus japonicus*, *Môcs. Term. füzetek*, iv. p. 268 (1880).

Exp. al.  $7\frac{1}{2}$  lin., long. corp.  $3\frac{1}{2}$  lin.

Pale luteous; head and antennæ black; the latter rather short and thick; thorax darker than the abdomen, with a blackish spot on the frontal lobe; region of the scutellum dusky; wings smoky hyaline, rather clearer towards the extremities. nervures piceous. Undersurface with the middle of the pectus as far as the base of the middle pair of legs violet-black; abdomen and legs pale luteous; coxæ in part violet-black; extremities of hind tibiæ dusky.

*Hab.* Japan.

*a, b.* ♀. (Types of *S. nigriceps*.) Hiogo. G. Lewis, Esq.

41. *Monophadnus lewisii*.

(Plate VIII. fig. 4.)

Very similar to *M. japonicus*, but a trifle smaller. Colour warmer luteous, the region of the scutellum dusky; thorax darker than the abdomen; undersurface (coxæ included) uniform luteous; tibiæ, except at base, and all the tarsi black; otherwise as in *M. japonicus*.

*Hab.* Japan.

*a.* ♀. (Type of species.) Hiogo. G. Lewis, Esq.

42. *Monophadnus rufus*.

(Plate VIII. fig. 6.)

*Monophadnus rufus*, *Cameron*, *Trans. Ent. Soc.* 1876, p. 461.

Exp. al. 7 lin., long. corp. 4 lin.

Reddish, shining; ocelli, more or less of the antennæ, hinder part of thorax (sometimes also the middle) and base of abdomen black, hind tarsi blackish at the extremity; pectus black in one specimen. Wings dusky hyaline, iridescent, clearer at the extremities.

*Hab.* China.

*Hab.* Colorado, Nevada.

61. *Monophadnus lineatus*.

(Plate VIII. fig. 9.)

Exp. al. 7 lin., long. corp. 3 lin.

Dull reddish or chestnut colour; head and antennæ black; face, collar, tegulæ, and a small spot on the pleura adjoining whitish or pale yellowish (thorax and pleura sometimes blackish); first segment of the abdomen bisected by a pale line above, and all the segments narrowly bordered behind with pale lines, both above and below, but most broadly on the sides, where the lines are turned forwards at a right angle; extremities of coxæ and trochanters whitish or yellowish, always paler than the rest of the legs.

*Hab.* Hudson's Bay.

a, b. ♀. (Types of species.)

St. Martin's Falls,  
Albany River.

Dr. Barnston.

62. *Monophadnus scutellatus*.

(Plate VII. fig. 18.)

Exp. al. 9 lin., long. corp. 4 lin.

Testaceous; antennæ above, except the basal joint, a large spot enclosing ocelli, two long spots, united behind, in the middle of the mesothorax, two smaller ones, on each side of the very large square

\* "*Robur*, Cress. Feeds on evergreen-oak in July."—MS. note attached to specimen.

scutellum, two short stripes behind the scutellum and a spot on each side of the second: a band divided in the middle in front of the first segment of the abdomen, a short depressed dash in the middle of the second, and a wide band on segments 4-S, all black. Legs rufotestaceous; basal half of hind tibiæ and first joint of hind tarsi paler. Wings yellowish hyaline, with yellowish nervures. Antennæ and legs pubescent.

*Hab.* Mexico.

a. ♀. (Type of species.) Orizaba. M. Sallé.

### 63. *Monophadnus erebus*.

(Plate VIII. fig. 10.)

Exp. al. 7 lin., long. corp. 3 lin.

Black, smooth, shining; cenchri and knees whitish. Wings brownish subhyaline, darkest at the base of fore wings, and iridescent.

*Female* dull black. In the Mexican specimen the anterior legs are paler. Antennæ stout and somewhat compressed.

*Hab.* Mexico; South America.

a-c. ♂ ♀. (Types of species.) Pará. H. W. Bates, Esq.  
d. ♀. Mexico. E. P. Collin.

### C. *Indian Species*.

#### 64. *Monophadnus cærulescens*.

(Plate VIII. fig. 8.)

*Monophadnus cærulescens*, *Cameron, Trans. Ent. Soc.* 1876, p. 461.

Exp. al. 8 lin., long. corp. 4 lin.

Blue-black, closely punctured; antennæ rather stout, pubescent; third joint considerably longer than fourth; cenchri large, white. Abdomen bright purple, with a slight reddish shine. Wings clear hyaline, with the apical half of the fore wings dusky; nervures piceous.

*Hab.* Nepal.

a. ♂. (Type of species.) Nepal. Gen. Hardwicke.

### D. *South-American Species*.

#### 65. *Monophadnus thoracicus*.

(Plate VIII. fig. 12.)

Exp. al. 7 lin. long. corp. 3 lin.

Head and abdomen black; thorax and scutellum rufotestaceous,

a black spot in front of the former; pectus testaceous; a white ring in front of the anterior coxæ enclosing a blackish space marked with two white spots; anterior legs testaceous; femora blackish at base beneath; intermediate legs piceous; hind legs black. Wings smoky hyaline.

Appears to be allied to *M. mexicanus*.

*Hab.* Amazons.

*a-c.* ♂ ♀. (Types of species.) Santarem. H. W. Bates, Esq.

### 66. *Monophadnus punctatus*.

(Plate VIII. fig. 11.)

Exp. al. 10 lin., long. corp. 4 lin.

Black; thorax, pectus, and base of abdomen shining rufo-testaceous; antennæ similar to those of *M. barda* &c., but more pubescent. Wings rather long; fore wings smoky brown, with the black spot in the second submarginal cell very distinct: hind wings clearer.

*Hab.* Brazil.

*a.* ♀. (Type of species.) Pará. H. W. Bates, Esq.

### 67. *Monophadnus paranus*.

(Plate VIII. fig. 13.)

Exp. al.  $6\frac{1}{2}$  lin., long. corp. 3 lin.

Testaceous, shining; head black above: the antennæ, which are also black, except the two basal joints, thickened and pubescent; hind tibiæ and tarsi black, the intermediate ones dusky. Wings hyaline, slightly yellow at base: costa and stigma yellowish, the former bordered in front with a row of short bristles.

*Hab.* Brazil.

*a.* ♂. (Type of species.) Pará. G. Grahame, Esq.

### 68. *Monophadnus batesii*.

(Plate VIII. fig. 14.)

Exp. al. 9 lin., long. corp. 3 lin.

Shining luteous: head (except clypeus and labrum), antennæ, three large and nearly contiguous spots on thorax, and the two apical segments of abdomen black. Wings hyaline (yellowish on fore wings), with yellow and piceous nervures; costal cell and stigma yellow; apical third of wings clouded.

*Hab.* Amazons.

*a.* ♀. (Type of species.) Amazons. H. W. Bates, Esq.

69. *Monophadnus* (?) *nigriceps*.

*Tenthredo nigriceps*, *Spinola, Mem. Accad. Torino* (2), xiii. p. 25 (1853).

*Hab.* Pará.

70. *Monophadnus* (?) *nigripennis*.

*Hab.* South America.

71. *Monophadnus atripennis*.

*Hylotoma atripennis*, *Fabr. Syst. Picz.* p. 27, n. 26 (1804); *Klug Wiedem. Zool. Mag.* i. pt. 3, p. 72, pl. ii. fig. 3 (1819).

*Hab.* South America.

## 67. XENAPATES.

Affinities doubtful; resembles *Monophadnus* in appearance. Head very large, as broad or broader than the thorax, and much extended behind the eyes, as in *Strongylogaster*; clypeus small and deeply incised; labrum large, hairy. Antennæ as long as the head and thorax, moderately stout and very pilose; second joint shorter than the first; the third longest. Abdomen nearly as wide as the thorax, not very long, and of equal breadth throughout. Fore wings with two marginal and four submarginal cells; lanceolate cell petiolated; hind wings with two middle cells.

1. *Xenapates africanus*.

(Plate VIII. fig. 2.)

*Dineura* (?) *africana*, *Cameron, Trans. Ent. Soc.* 1876, p. 470.

Exp. al. 7 lin., long. corp. 3 lin.

Black above: cenchri white; abdomen shining, shading into mahogany colour in the middle, and tinted with violet. Head below the antennæ (mandibles excepted), abdomen beneath, and legs waxen white; four hind tibiæ and tarsi darker above; sides of collar, a spot behind below the first pair of wings, and another on the sides of the pectus below the second pair, whitish. Wings fusc-hyaline.

*Hab.* Sierra Leone.

a. ♂. (Type of species.)

Sierra Leone.

Rev. D. F. Morgan.

## 68. POMPHOLYX.

Pompholyx, *Freythuth, Protocole 47<sup>m</sup> séance Soc. d'antr. Mosc. Jan. 29, viii, p. 216 (1870).*

## 1. Pompholyx dimorpha.

Pompholyx dimorpha, *Freythuth, Protocole 47<sup>m</sup> séance Soc. d'antr. Mosc. Jan. 29, viii, p. 217 (1870).*

*Hab.* Samarcand.

## 69. SENOCLIA.

*Senoclia, Cameron, Trans. Ent. Soc., 1877, p. 88, note.*

*Anisioartha, Cameron, Trans. Ent. Soc. 1876, p. 461, nom. provoc.*

"Antennæ covered with long depressed hairs, with third and fourth joints equal, a little dilated at apex; fifth a little longer than the fourth, also dilated at apex; sixth nearly a fourth shorter than the fifth, still more dilated at apex, and sharply cut off from seventh, which is much shorter than sixth; two apical joints a little shorter than seventh. Clypeus smooth, straight at apex. Alar neurulation of *Momphodius*; marginal nervure received a little past middle of third submarginal; posterior wings with one middle cellule. Scutellum raised, conspicuous, smooth and shining." (*Cameron.*)

1. *Senoclia cærulea*.

(Plate VIII, figs. 20 & 21.)

*Anisioartha cærulea, Cameron, Trans. Ent. Soc. 1876, p. 462.*

Exp. ad. 8-10 lin., long. corp. 4-5 lin.

"*Femth.* Blue, shining. Head and thorax pilose. Antennæ shorter than abdomen. Terebra projecting, hairy. Spurs long. Wings bluish black, iridescent; costa and stigma bluish black. *Male* similar, but with longer antennæ, and wings clearer at base." (*Cameron.*)

The eyes are large and whitish, and the fore wings are strongly flushed with blue; all the basal cells clear in the male as far as the lanceolate cell, and all opaque in the female.

*Hab.* Ceylon.

*a, b.* ♂ ♀. (Types of species.) Ceylon. Dr. Thwaites.

2. *Senoclia purpurata*.

(Plate VIII, fig. 19.)

*Tenthredo* (Allant is) *purpurata, Smith, Journ. Linn. Soc., Zool. iv, p. 23 (1860).*

*Anisioartha cyanella, Cameron, Trans. Ent. Soc. 1876, p. 462.*

Size of *S. cerulea*. "Bluish black, shining, pubescent; colour with a purplish tinge; wings darker, third submarginal cellule shorter;" fore wings with the costal cell, and that only, clear in both sexes; eyes brown; "antennæ shorter, more thickened towards the apex, the three apical joints not being so sharply cut off from the preceding, and the anterior feet are pale in front. In the male the antennæ are shorter, more thickened towards the apex; posterior wings darker. The antennæ look not unlike those of *Athalia*." (*Cameron*.)

*Hab.* Celebes; New Guinea.

*a-c.* ♂ ♀. (Types of species.) Celebes. A. R. Wallace, Esq.  
*d.* ♂. New Guinea. A. R. Wallace, Esq.

16. *Eriocampa bengalensis*.

(Plate VIII. fig. 17.)

*Monophadnus bengalensis*, *Cameron, Trans. Ent. Soc.* 1876, p. 461.

Exp. al. 10 lin., long. corp. 5 lin.

Blue-black; abdomen rather brighter, palpi and legs white, base of coxæ, tips of femora and of hind tibiæ, and hind tarsi blue-black. Clypeus rounded; face very hairy; antennæ broken, but third joint distinctly longer than fourth. Saw unusually prominent; cenchri white, triangular. Fore wings dusky hyaline, with piceous nervures; base clearer; lunceolate cell with oblique cross-nervure, but the anal nervure runs so near the inner margin that the cell appears petiolated at first sight; hind wings hyaline, clouded at apex; a small dot in the second submarginal cell.

*Hab.* Bengal.

a. ♀. (Type of species.) Bengal.

(Plate IX. figs. 1 & 2.)

Exp. al. 6-7 lin., long. corp. 3 lin.

Luteous; head, centre of thorax in male, or a spot on the frontal lobe in the female, and the last two segments of the abdomen black; pectus with a black spot on each side in the male; all the legs black below the middle of the tibiæ. Wings smoky yellowish hyaline, with piceous nervures, costa, and stigma; hind wings clearer.

*Hab.* Amazons.

a. ♂ ♀. (Types of species.)                      Amazons.                      H. W. Bates, Esq.

#### 25. *Selandria antennata*.

(Plate VIII. fig. 16.)

Exp. al. 7 lin., long. corp. 3½ lin.

Luteous; thorax darker above; abdomen beneath very pale, almost whitish. Antennæ black, very setose, the divisions of the three basal joints above, and of the others beneath, pale; the three apical joints much narrower than the others. Vertex black, as far as surrounding the ocelli, which are white; a frontal spot on the thorax, tip of abdomen, the four hinder tarsi, and the hind tibiæ (except at base) black. Wings dusky hyaline, clouded at the base and tips; costa and stigma black.

*Hab.* Amazons.

a. ♂. (Type of species.)                      Amazons.                      H. W. Bates, Esq.

### Subfamily VIII. PHYLOTOMINÆ.

#### 74. PHYLOTOMA.

*Phyllotoma*, *Fallén, Mon. Tenthr.* p. 25 (1829); *Hart. Blattw.* p. 254 (1837); *Cameron, Proc. N. H. Soc. Glasg.* ii. p. 317 (1875).  
*Druida*, *Newm. Ent. Mag.* v. p. 484 (1838).  
*Heterarthrus*, *Steph. Ill. Brit. Ent., Mand.* vii. p. 91 (1835).

*Melicerta ochroleucus*, *Steph. Ill. Brit. Ent., Mand.* vii. p. 95 (1835).

*Heptamelus ochroleucus*, *Halid. Nat. Hist. Rev.* ii. p. 60, pl. ii. fig. 1 (1855).

*Hab.* Devonshire; Ireland.

## 78. CÆNONEURA‡.

*Cænoneura*, *Thoms. Op. Ent.* ii. p. 270 (1870); *id. Hym. Scand.* i. p. 182 (1871).

1. *Cænoneura dahlbomi*.

*Cænoneura dahlbomi*, *Thoms. Op. Ent.* ii. p. 271 (1870); *id. Hym. Scand.* i. p. 182 (1871); *André, Spec. Hym.* i. pp. 238 & 239, pl. xv. fig. 1 (1850).

*Hab.* Sweden.

## 79. FENELLA.

*Fenella*, *Westw. Mod. Class. Ins.* ii. *App.* p. 54 (1840).

*Melinia*, *Costa, Faun. Nap., Tentr.* p. 41 (1859).

1. *Fenella pumila*.

*Tenthredo* (*Allantus*) *pumila*, *Klug, Berl. Mag.* viii. p. 72, n. 53 (1818).

*Fenella nigrita*, *Westw. Mod. Class. Ins.* ii. *App.* p. 54 (1840).

*Melinia minutissima*, *Costa, Faun. Nap., Tentr.* p. 41, pl. lxvi. fig. 7 (antenna) (1859).

*Hab.* Europe.

*a-c.* ♀.

Britain.

J. F. Stephens.

\* Probably identical with the last species.

† The Stephensian specimen representing this species in the British Collection is *Strongylogaster chlorina*, Klug (cf. *Can. Ent. M. M.* xiii. p. 175), which differs both generically and specifically from the descriptions of Stephens and Haliday; and Stephens says that the antennæ were broken in his specimen, whereas they are perfect, or nearly so, in the above-mentioned specimen of *S. chlorina*.

‡ This genus must be closely allied to, if not identical with, *Heptamelus*.

2. *Fenella tormentillæ*.

*Phyllotoma tormentillæ*, *Healy, Ent.* iv. p. 140 (1868).  
*Fenella nigrita*, *Thoms. Op. Ent.* ii. p. 270, n. 2 (1870); *id. Hym. Scand.* i. p. 180 (1871).

*Hab.* Europe.

3. *Fenella minuta*.

*Fenella minuta*, *Thoms. Op. Ent.* ii. p. 270, n. 1 (1870); *id. Hym. Scand.* i. p. 181 (1871).

*Hab.* Sweden.

4. *Fenella monilicornis*.

*Fenella monilicornis*, *Thoms. Hym. Scand.* i. p. 181 (1871).

*Hab.* Sweden.

## Subfamily IX. EMPHYTINÆ.

## 80. EMPHYTUS.

*Tenthredo*, fam. ix. (*Emphytus*, p.), *Klug, Berl. Mag.* viii. p. 278 (1819).  
*Emphytus*, sect. i., *Hart. Blattw.* p. 247 (1837).

A. *Europæo-Asiatic Species, including North Africa, Western Asia, and Japan.*

*Emphytus zonarius*, *Mö s. Term. füzetek*, iv. p. 268 (1880).

*Hab.* Persin.

45. *Emphytus fuscipennis*.

(Plate IX, fig. 5.)

*Dolerus fuscipennis*, *Smith, Trans. Ent. Soc. Lond.* 1874, p. 383.

Exp. al. 8 lin., long, corp. 4 lin.

Black, with a thin, short, hairy pubescence; scapulae and cenchri white; wings fuscous; anterior tibiae in front, posterior trochanters, and the tibiae outside white; a short white line on the sides of segments 1 and 5 of the abdomen.

*Hab.* Japan.

a. ♀. (Type of species.) Hiogo. G. Lewis, Esq.

46. *Emphytus japonicus*.

*Dolerus axialis*, *Möschler, Künig's Bull. Mosc.* xxxix. p. 182 (1866).

*Hab.* Japan\*.

47. *Emphytus nigrocæruleus*.

(Plate IX, fig. 6.)

*Dolerus nigrocæruleus*, *Smith, Trans. Ent. Soc. Lond.* 1874, p. 384.

Exp. al. 6 lin., long, corp. 3 lin.

Blue-black, head and eyes very large, clypeus white, mandibles reddish at the tips. Four front legs white, with a black line above; hind legs blue-black, coxae, trochanters, and the extremities of the femora and tibiae excepted. The middle of the second and third segments above, and 1 of two or three basal segments below, white. Wings iridescent hyaline, with fuscous nervures.

*Hab.* Japan.

a. ♀. (Type of species.) Japan. G. Lewis, Esq.

B. *North-American Species*.48. *Emphytus inornatus*.

*Dolerus inornatus*, *Say, Long's 2nd Exped.* ii. p. 319, n. 1 (1824).

\* Appears to be allied to *E. fuscipennis*; but the face is white, and the wings are not said to be clouded.

*Emphytus inornatus*, *Nort. Proc. Bost. Soc.* viii. p. 155, n. 1 (1861);  
*id. Trans. Amer. Ent. Soc.* i. p. 227 (1867).

*Hab.* United States.

#### 49. *Emphytus canadensis*.

*Emphytus pallipes*, *Provancher (nec Spin.)*, *Nat. Canad.* x. p. 66 (1878).

*Hab.* Canada.

#### 50. *Emphytus apertus*.

*Emphytus apertus*, *Nort. Proc. Bost. Soc.* viii. p. 155, n. 2 (1861);  
*id. Trans. Amer. Ent. Soc.* i. p. 228 (1867).

*Hab.* United States.

#### 51. *Emphytus stramineipes*.

*Emphytus stramineipes*, *Cress. Trans. Amer. Ent. Soc.* viii. p. 52 (1880).

*Hab.* Washington Territory.

#### 52. *Emphytus mellipes*.

*Emphytus mellipes*, *Nort. Proc. Bost. Soc.* viii. p. 155, n. 3 (1861).

*Hab.* United States.

#### 53. *Emphytus cinctipes*.

*Emphytus cinctipes*, *Nort. Trans. Amer. Ent. Soc.* i. p. 229 (1867).

*Hab.* United States.

*Harpiphorus lepidus*, *Thoms. Hym. Scand.* p. 197 (1871).

*Fenusa ianthe*, *Newm. Ent. Mag.* iv. p. 261 (1837).

*Hab.* Central Europe.

*a-h.* ♀.

Germany.

J. F. Ruthe.

2. *Harpiphorus tæniatus*.

*Harpiphorus tæniatus*, *Costa, Ann. Mus. Nap.* v. p. 14, note (1869).

*Hab.* Piedmont.

3. *Harpiphorus immersus*.

*Tenthredo* (*Emphytus*) *immersa*, *Klug, Berl. Mag.* viii. p. 284, n. 205 (1818).

*Dolerus pallimacula*, *St.-Farg. Mon. Tenth.* p. 117, n. 344 (1823);  
*id. Faun. Franç.* p. 55, n. 5, pl. viii. fig. 2; *Brullé, Hym.* iv.  
pl. xlvii. fig. 3 (1846).

*Emphytus fenestratus*, *Eversm. Bull. Mosc.* xx. p. 27 (1847).

*Hab.* Europe, Siberia.

a. ♂.	Britain.	J. F. Stephens.
b. ♀.	Germany.	J. F. Ruthe.
c. ♀.	Zurich.	H. Buechecker.

4. *Harpiphorus vernalis*.

*Emphytus* (*Harpiphorus*) *vernalis*, *Dietr. Mitth. schweiz. ent. Ges.* ii.  
p. 354 (1856).

*Hab.* Germany, Switzerland.

a. ♀.	Munich.	H. Buechecker.
-------	---------	----------------

5. *Harpiphorus majalis*.

*Emphytus majalis*, *Vollenh. Tijdschr. Ent.* xii. p. 121, pl. iii. fig. 2  
(1869).

*Hab.* Utrecht.

6. *Harpiphorus hybridus*.

*Tenthredo* (*Pæcilocstoma*) *hybrida*, *Erichs. Middend. Reise*, ii. pt. 1,  
p. 60 (1851).

*Hab.* Siberia.

7. *Harpiphorus vexator*.

(Plate IX. fig. 4.)

*Macrophya vexator*, *Smith, Trans. Ent. Soc.* 1874, p. 378.

Exp. al. 7 lin., long. corp. 4½ lin.

Black; head, clypeus, inner and hinder border of the eyes, joints 6-8 of the antennæ, anterior tibiæ and tarsi in front, hind coxæ, trochanters, and base of the femora, first joint of the hind tarsi, and the second and third joints all white. Wings yellowish hyaline, with fuscous nervures; the stigma white at the base.

*Hab.* Japan.

a. ♀. (Type of species.)	Iliogo.	G. Lewis, Esq.
--------------------------	---------	----------------

8. *Harpiphorus varianus*.

*Emphytus varianus*, *Nort. Proc. Bost. Soc.* viii. p. 156, n. 4 (1861);  
*id. Trans. Amer. Ent. Soc.* i. p. 229, n. 5 (1867).

*Hab.* United States.

a. ♀.

9. *Harpiphorus versicolor*.

*Emphytus versicolor*, *Nort. Trans. Amer. Ent. Soc.* i. p. 230, n. 6  
 (1867).

*Hab.* Illinois.

10. *Harpiphorus testaceus*.

*Emphytus testaceus*, *Nort. Proc. Bost. Soc.* viii. p. 156, n. 5 (1861);  
*id. Trans. Amer. Ent. Soc.* i. p. 230, n. 7 (1867).

*Hab.* United States.

11. *Harpiphorus semicornis*.

*Emphytus semicornis*, *Say, Bost. Journ.* i. p. 220, n. 2 (1835); *Nort.*  
*Trans. Amer. Ent. Soc.* i. p. 231, n. 8.

*Hab.* United States.

*Emphytus tarsatus*, *Say, Bost. Journ.* i. p. 219, n. 1 (1835); *Nort.*  
*Proc. Bost. Soc.* viii. p. 157, n. 7 (1861); *id. Trans. Amer. Ent. Soc.*  
 i. p. 231, n. 9 (1867).

*Hab.* North America.

a. ♀.

St. Martin's Falls, Albany River,  
 Hudson's Bay.

Dr. Barnston.

Closely allied to *H. immersus*.

13. *Harpiphorus bollii*.

*Emphytus bollii*, *Nort. Trans. Amer. Ent. Soc.* iv. p. 80 (1872).

*Hab.* Texas.

14. *Harpiphorus maculatus*.

*Emphytus maculatus*, *Nort. Proc. Bost. Soc.* viii. p. 157, n. 8 (1861);  
*id. Trans. Amer. Ent. Soc.* i. p. 232 (1867).

*Hab.* North America.

a-e. ♂ ♀.

St. Martin's Falls, Albany River,  
 Hudson's Bay.

Dr. Barnston.

Closely allied to *H. immersus*.

15. *Harpiphorus improbus*.

*Emphytus improbus*, *Cress. Trans. Amer. Ent. Soc.* viii. p. 11 (1880).

*Hab.* Nevada.

16. *Harpiphorus* (?) *platycerus*.

*Emphytus platycerus*, *Say, Bost. Journ.* i. p. 220, n. 3 (1835).

*Hab.* Indiana.

17. *Harpiphorus recens*.

*Emphytus recens*, *Say, Bost. Journ.* i. p. 221, n. 4 (1835).

*Hab.* Indiana.

18. *Harpiphorus* (?) *articulatus*.

*Tenthredo* (*Emphytus*) *articulata*, *Klug, Berl. Mag.* viii. p. 284, n. 204 (1818).

*Hab.* Baltimore.

## 82. ANEUGMENUS.

*Emphytus*, sect. iii. *Aneugmenus*, *Hirt. Blatt.* p. 253 (1837).

1. *Aneugmenus infuscatus*.

*Emphytus infuscatus*, *Leersm. Bull. Mosc.* xx. p. 20 (1847).

*Hab.* Kasan.

a. ♂.

Munich (?).

H. Buchecker.

2. *Aneugmenus coronatus*.

*Tenthredo* (*Emphytus*) *coronata*, *Klug, Berl. Mag.* viii. p. 276, n. 183 (1818).

*Hab.* Silesia.

3. *Aneugmenus* (?) *radialis* \*.

*Emphytus radialis*, *Leersm. Bull. Mosc.* xx. p. 28 (1847).

*Hab.* Kasan.

## 83. ATHLOPHORUS.

*Athlophorus*, *Burm. Jubelfeier Dr. Klug*, 1847.

1. *Athlophorus klugii*.

*Athlophorus klugii*, *Burm. Jubelfeier Dr. Klug*, 1847.

*Hab.* Java.

## 84. PÆCILOSTOMA.

*Pæcilostoma*, *Dahlb. Consp. Tenth.* pp. 9, 13 (1835); *Hart. Blatt.* p. 302 (1837).

*Pæcilostoma*, *Thoms. Hym. Scand.* i. p. 227 (1871).

\* Probably the type of a new genus: lanceolate cell with oblique cross-line; hind wings with two middle cells. Andre places it in *Harpiphorus*.

1. *Pæcilostoma pulveratum*.

- Tenthredo pulverata*, *Retz. Gen. Spec. Ins.* p. 72, n. 304 (1783).  
*Tenthredo limbata*, *Gmel. Syst. Nat.* i. pt. v. p. 2667, n. 121 (1789);

4. *Pæcilostoma longicorne*.

- Pæcilosoma longicornis*, *Thoms. Hym. Scand.* i. p. 232, n. 6 (1871).

*Hab.* Sweden.

5. *Pæcilostoma submuticum*.

- Pæcilosoma submutica*, *Thoms. Hym. Scand.* i. p. 232, n. 7 (1871).

*Hab.* Sweden.

6. *Pæcilostoma excisum*.

- Pæcilosoma excisa*, *Thoms. Hym. Scand.* i. p. 233, n. 8 (1871).

*Hab.* Sweden.

7. *Pæcilostoma* (?) *gelidum*.

*Tenthredo* (*Pæcilostoma*) *gelida*, *Erchs. Middend. Reise*, ii. pt. 1<sup>r</sup> p. 61 (1851).

*Hab.* Siberia.

8. *Pæcilostoma inferentia*.

*Pæcilostoma inferentia*, *Nort. Trans. Amer. Ent. Soc.* ii. p. 224 (1868).

*Hab.* North America.

a. ♂. St. Martin's Falls, Albany River, Dr. Barnston.  
Hudson's Bay.

9. *Pæcilostoma albosectum*.

*Strongylogaster albosectus*, *Provancher, Nat. Canad.* x. p. 168 (1878).

*Hab.* Canada.

10. *Pæcilostoma coquimbense*.

*Tenthredo coquimbensis*, *Spin. Gay's Fauna Chilena*, vi. p. 556 (1851).

*Hab.* Chili.

## 85. TAXONUS.

*Taxonus*, *Hart. Blattw.* p. 297 (1837).

1. *Taxonus agrorum*.

*Tenthredo* (*Allantus*) *nitida*, *Klug, Berl. Mag.* viii. p. 218, n. 179 (1818).

*Tenthredo agrorum*, *Fallén, Vetensk. Handl.* xxix. p. 59 (1808).

*Taxonus agrorum*, *Thoms. Hym. Scand.* i. p. 234 (1871).

*Hab.* Central Europe.

a. ♂.	Britain.	J. F. Stephens.
b. ♀. ( <i>As T. bicolor.</i> )	Britain.	J. F. Stephens.
c-g. ♂ ♀.	Germany.	J. F. Ruthe.
h, i. ♀.	Sweden.	

2. *Taxonus sticticus*.

*Tenthredo* (*Allantus*) *stictica*, *Klug, Berl. Mag.* viii. p. 218, n. 180 (1818).

*Hab.* Hungary.

3. *Taxonus equiseti*.

*Tenthredo* (*Allantus*) *bicolor*, *Klug, Berl. Mag.* viii. p. 219, n. 181 (1818).

*Tenthredo equiseti*, *Fall. Vet.-Akad. Handl.* xxix. p. 60, n. 20 (1808).

*Taxonus equiseti*, *Thoms. Hym. Scand.* i. p. 234 (1871).  
*Taxonus pratorum*, *Thoms. Opusc. Ent.* ii. p. 290, n. 2 (1870).  
*Tenthredo bizonata*, *Zett. Ins. Lapp.* p. 344, n. 24 (1838).

*Hab.* Europe.

<i>a-h.</i> ♂ ♀.	Germany.	J. F. Ruthe.
<i>i, k.</i> ♂ ♀.	Munich.	H. Buchecker.

#### 4. *Taxonus coxalis*.

*Tenthredo coxalis*, *Hart. Blattw.* p. 298, n. 4 (1837).

*Hab.* Germany.

#### 5. *Taxonus minutus*.

*Taxonus minutus*, *Costa, Faun. Nap., Tentr.* p. 110, pl. lxxviii. fig. 4 (1859).

*Hab.* Naples.

#### 6. *Taxonus glabratus*.

*Tenthredo* (*Allantus*) *agilis*, *Klug, Berl. Mag.* viii. p. 203, n. 159 (1818).

*Tenthredo glabrata*, *Fall. Vet.-Akad. Handl.* xxix. p. 103, n. 43 (1808).

*Taxonus glabratus*, *Thoms. Hym. Scand.* i. p. 235 (1871).

<i>a.</i> ♂.	Britain.	J. F. Stephens.

74. *Dolerus japonicus*.

(Plate IX. fig. 7.)

Exp. al. 8 lin., long. corp. 4 lin.

Head black, coarsely punctured, but not hairy; prothorax, frontal lobe, and sides of thorax testaceous; scutellum, metathorax, and first segment of the abdomen black; cenchri and abdomen testaceous. Pectus, except the prothorax and adjoining part of the pleura, black, finely punctured, and clothed with short white hairs; legs black, femora rather broad, and clothed with hair like the pectus; front legs testaceous below the middle of the femora. Abdomen wholly testaceous beneath, except the saw and sheaths, which are black, and set with diverging bristles at the extremity. Wings hyaline, with a smoky-yellowish shade, especially towards the base of the fore wings; nervures and stigma black.

Allied to *D. pratensis* and *D. lateritius*. It was regarded by the late Mr. F. Smith as doubtfully identical with the former.

*Hab.* Japan.

*Hab.* California.

C. *Indian Species.*97. *Dolerus rufocinctus.*

(Plate IX. fig. 9.)

*Dolerus rufocinctus*, *Cameron, Trans. Ent. Soc. Lond.* 1876, p. 469.

Exp. al. 9-11 lin., long. corp. 4-5 lin.

Very similar to *D. japonicus* (vide p. 228), but of a more purplish shining black. The sides of the pectus are more coarsely punctured, and the base of the costa is yellow. Head densely covered with long white hairs: all the legs black, the front tarsi reddish on the under surface; first segment of the abdomen and the middle of the second above, and from the hinder edge of the sixth segment to the extremity, black, both above and below: all the other characters as in *D. japonicus*.

*Hab.* N. India.*a, b.* ♀. (Types.)

N. India.

Capt. Boyes.

12. *Athalia proxima*.

(Plate IX. fig. 14.)

*Tenthredo* (*Allantus*) *proxima*, *Klug, Berl. Mag.* vii. p. 130, n. 5 (1816).  
*Athalia tibialis*, *Cam. Trans. Ent. Soc. Lond.* 1876, p. 460.

Exp. al. 6-7 lin., long. corp. 3 lin.

Luteous, shining; head, hinder half of thorax above, tarsi, hind tibiae, upperside of the other tibiae, and sheaths of saws black; palpi

pale testaceous; lower edge of clypeus (occasionally) white. Wings smoky hyaline, with black nervures; tegulae luteous.

Male with the two basal joints of antennæ beneath and apex of clypeus, with the labrum, white; clypeus very hairy, spurs pale.

Klug described this species as from Baltimore, but no other authority for the occurrence of an *Athalia* in America exists; and, after a careful examination of his description, I have no doubt that he had this common Indian species before him.

*Hab.* India.

*a-g.* ♂ ♀. (Types of *A. tibialis*.) Barrackpore? Sir J. Hearsey.

(Plate IX. fig. 19.)

*Allantus trochanteratus*, *Cameron, Trans. Ent. Soc. Lond.* 1876,  
p. 464.

Exp. al. 10-11 lin., long. corp. 4-5 lin.

Black; head pilose, punctured; antennæ rather long, thickened towards the extremity. Clypeus, labrum (in male only, reddish brown in female), palpi, coxæ and trochanters, narrow belts on the extremities of segments 2-4 above (nearly obsolete in the female, except on the sides), a large square spot on the back of segment 8, and the front of the four anterior femora and tibiæ, pale yellow; femora otherwise, and the upperside of the four anterior tibiæ and tarsi in the male, and of the front tibiæ only in the female, black. Collar, tegulæ, tibiæ, and tarsi (except as previously indicated) reddish; joints of the tarsi black at the tips. Wings yellowish hyaline, with brown stigma and nervures; costa yellowish; a smoky shade extending over the upper half of the fore wings, except at the base.

92. *SIOBLA*.

*Siobla*, *Cameron, Trans. Ent. Soc. Lond.* 1877, p. 88.

"Anterior wings with two marginal and four submarginal cellules, the second and third of the latter receiving each a recurrent nervure; lanceolate cellule with an oblique cross nervure; posterior wings with two middle cellules. Antennæ 9-jointed, the apical joints thickened, the third joint much longer than fourth; clypeus small, the apex truncated; eyes large, reaching to near the base of the mandibles."—*Cameron*.

Type *S. mooreana*. I place in this genus a number of species (chiefly Asiatic) which agree with it in the majority of their characters, especially in the oblique cross nervure of the lanceolate cell. The hind coxæ are generally as long as in *Macrophya*, with which they were formerly associated; but the abdomen is much shorter than in that genus.

1. *Siobla sturmii*.

*Tenthredo* (*Allantus*) *sturmii*, *Klug, Berl. Mag.* viii. p. 116, n. 83 (1818).

? *Allantus ruficornis*, *Gimm. Bull. Mosc.* vii. p. 124 (1834).

*Hab.* Nuremberg; Livonia(?)

2. *Siobla ruficornis*.

(Plate IX. figs. 16 ♂, 18 ♀.)

*Eriocampa ruficornis*, *Cameron, Trans. Ent. Soc. Lond.* 1876, p. 462.

Exp. al. 11 lin., long. corp.  $4\frac{1}{2}$  lin.

Head and thorax dull black, coarsely punctured: clypeus and antennæ reddish: cenchri white. Abdomen black at base and tip above, and more shining than the head and thorax: segments 3-6 above (except the base of the third) and whole undersurface shining luteous: saws reddish. Legs luteous: coxæ and trochanters black, and four front femora black at base: hind coxæ large: hind femora black, except at base: hind tibiæ black at the extremity. Wings yellowish hyaline, with brownish nervures: costa and stigma yellow: tegulae black.

In the male the markings are redder, the antennæ are black at the base nearly to the end of the third joint, and only segments 3, 4, and part of 5 are red above. Segments 2-5 are reddish at the sides and beneath: beyond this the sides are black beneath, and the anal segment is whitish.

*Hab.* Amoor.

*a, b.* ♂ ♀. (Types.) Amoor.

### 3. *Siobla pacifica*.

(Plate IX. fig. 17.)

*Macrophya pacifica*, *Smith, Trans. Ent. Soc. Lond.* 1874, p. 378.

Exp. al. 12 lin., long. corp. 5 lin.

Black, shining: antennæ reddish, the two basal joints darker, cenchri yellow: second segment of abdomen luteous above, but divided in the middle: four front legs reddish yellow below the tips of the femora, hind femora wholly black: tibia and tarsi reddish yellow at the base: hinder half of tibia, and of the first joint of the tarsi, and the tips of the remaining joints, black. Wings dull yellowish hyaline, with fuscous nervures: stigma yellow: a dark line along the costa.

Described from one female example. Smith describes the male as having the base of the antennæ black, nearly to the extremity of the third joint, and a yellow, slightly interrupted band on segments 2 and 3 of the abdomen. But no such specimen exists in the British-Museum collection.

*Hab.* Japan.

*a.* ♀. (Type.) North Japan. R. Fortune.

### 4. *Siobla flavipes*.

(Plate IX. fig. 22.)

*Macrophya flavipes*, *Smith, Trans. Ent. Soc. Lond.* 1874, p. 381.

Exp. al. 8 lin., long. corp. 3½ lin.

Head black between the eyes: antennæ reddish yellow, face paler yellow, back of head reddish. Thorax black, with a reddish patch

in the middle; scutellum reddish, collar (narrowly) and cenchri yellowish. Abdomen black above, with a reddish shine; the two first segments above, the four first beneath, and all the legs, including the coxæ, yellow. Wings dusky hyaline, with fuscous nervures; costa yellowish, stigma black.

This insect agrees in shape and neuration with the two preceding species, but the antennæ are more slender.

*Hab.* Japan.

a. ♀. (Type.)

Hiogo.

G. Lewis, Esq.

### 5. *Siobla ferox*.

(Plate IX. fig. 20.)

*Macrophya ferox*, *Smith, Trans. Ent. Soc. Lond.* 1874, p. 379.

Exp. al. 13 lin., long. corp. 6 lin.

Black; antennæ, collar, tegulæ, scutellum, hinder edge of metathorax, first five segments of abdomen (the first broadly edged with black in front, and the second less broadly so), four front legs, the hind tibiæ (except the apical third, which is black), and the hind tarsi reddish yellow; face, cenchri, four anterior coxæ, and hind trochanters and tips of coxæ paler yellow; hind coxæ and femora otherwise black. Wings yellowish hyaline, clouded towards the extremity; nervures fuscous; costa and stigma yellowish, the former darkest before the stigma.

Described from one male example (not a female, as stated by Smith).

*Hab.* Japan.

a. ♂. (Type.)

Hakodadi.

H. Whitely, Esq.

### 6. *Siobla incerta*.

(Plate IX. fig. 15.)

*Tenthredo incerta*, *Cameron, Trans. Ent. Soc. Lond.* 1876, p. 465.

Exp. al. 8 lin., long. corp. 4 lin.

Head, abdomen, and middle of pectus blue-black, shining, with a reddish shade on the undersurface; head covered with a fine whitish pile. Thorax and sides of pectus in front red; the angular spot at the extremity of the first segment of the abdomen, segments 3 and 4 above, and part of the legs white; base of coxæ, middle of femora, and extremity of hind tibiæ black; all the tarsi more or less black, except the base of the anterior tarsi. Wings hyaline at the base, and clouded at the extremities; nervures piceous; costa and stigma more uniformly dark than usual, a dark cloud below the latter.

The hind coxæ are much smaller than in the other species which

I have provisionally included in *Stobla*; but they are likewise shorter in the American species than in those from Northern Asia.

*Hab.* Burmah.

*Hab.* United States.

### 9. *Stobla robusta*.

(Plate IX, fig. 21.)

Exp. al. 1 lin., long. corp. 4-5 lin.

Body short and stout; lanceolate cell with oblique cross nerve; hind wings with one middle cell (two on one side of one specimen); hind coxæ shorter than usual, scarcely extending beyond the third segment of the abdomen.

Black; head and thorax coarsely punctured; collar yellow or reddish; the two basal joints of the antennæ, and sometimes the base of the third, clypeus, tegulae, hinder edge of the metathorax above, and second segment of the abdomen above, rufous; a spot on each side of the prothorax in front; cœnari and first segment of the abdomen above yellow. Anterior legs wanting; intermediate legs yellowish; femora blackish towards the base. Hind legs yellow, the greater part of the coxæ and femora and apical third of the tibiae black; trochanters and adjacent parts and base of tibiae yellow; tarsi black or rufous. Wings smoky yellow, clearer towards the base, especially on the hind wings; nervures rufous; stigma yellow on the basal side.

Allied to the last species.

*Hab.* Georgia.

a, b. ♀. (Types.) Georgia\*. Probably from Abbot's collection.

## 93. ALLOMORPHA.

*Allomorpha*, *Cameron, Trans. Ent. Soc. Lond.* 1876, p. 463.

Head large, produced for half its length behind the eyes; antennæ

\* This species is figured in Abbot's MS. drawings, xii. pl. lvii. fig. 2, with the following note attached:—"Taken 15th April in the pine-woods. Rare."

with the third joint considerably longer than fourth, fifth to eighth gradually becoming thickened, shorter, and sharply divided from preceding; apical joint thinner, conical. Clypeus very deeply incised, labrum rounded. Body shaped as in *Tenthredo*. Fore wings with the neuration of *Strongylogaster*: lanceolate cell with oblique cross nervure; hind wings with one inner cell. Patella not so sharply developed as in *Strongylogaster*; first joint of tarsi nearly twice and a half longer than the following; spurs short and thick; hind tarsi longer than the tibiæ. Abdomen smooth, shining. Breast and pleura punctured.

### 1. *Allomorpha incisa*.

(Plate X. fig. 22.)

*Allomorpha incisa*, Cameron, *Trans. Ent. Soc. Lond.* 1876, p. 463.

Exp. al. 10 lin., long. corp. 5 lin.

Head testaceous; vertex and a stripe on the lower parts of the checks black, the former very coarsely punctured; antennæ black, the three first joints with a chocolate tinge, especially beneath, joint four and the greater part of five testaceous. Thorax and abdomen black; thorax and pectus dull, closely punctured; tegulae, scutellum, postscutellum, cenchri, a band behind, a large triangle on the first segment of the abdomen, the second and terminal segments, a line down the middle of the remaining segments, more or less of the middle of the abdomen beneath, and the legs testaceous. Coxæ except at tips, hind femora except at base, and tips of hind tibiæ black. Wings hyaline, with piceous nervures and yellowish stigma.

*Hab.* China.

*Amisoneura*, Cameron, *Trans. Ent. Soc. Lond.* 1876, p. 463, *nom. præocc.*

Antennæ a little longer than the abdomen, pilose, the third joint a little longer than the fourth, the remaining joints shorter and

thickened; terminal joint thinner and conical. Clypeus not incised. Wings with two marginal and four submarginal cells, marginal cells about equal, divided by a straight oblique nervure; first submarginal cell rather small, the bounding nervure straight, third submarginal cell dilated at the extremity; second and third submarginal nervures distinctly curved inwards towards the base; marginal nervure received nearly at the extremity of the third submarginal cellule; first recurrent nervure received at about a third of the length of the second submarginal cellule; second recurrent nervure curved inwards, and corresponding with the second submarginal nervure. Lanceolate cellule open at the shoulders, with a very oblique cross line. Body as in *Macrophya*. Hind coxæ very large and long; spurs of the anterior tibiæ simple.

### 1. *Beleses stigmatalis*.

(Plate X. fig. 21.)

*Anisoneura stigmatalis*, *Cameron, Trans. Ent. Soc. Lond.* 1876, p. 464.

Exp. al. 10–11 lin.. long. corp.  $4\frac{1}{2}$  lin.

Luteous, shining; head and thorax rather darker above; antennæ gradually shading into black from beyond the second joint above, pale beneath; more or less of the apex of the abdomen, and of the hind tarsi, which are broad and densely pilose, black. Pectus, hind coxæ, and femoræ covered with very fine depressed punctures. Wings yellowish hyaline, blackish at the tips; nervures fuscous; costa and stigma yellow, the tip of the latter, within the dark apex of the wing, black.

*Hab.* China.

25. *Macrophya hartigii*.

(Plate X. fig. 1.)

Exp. al. 11 lin., long. corp. 5 lin.

Black: mouth, cenchri, and a triangular mark at the extremity of the first segment of the abdomen pale yellow: segments 4 and 5 of the abdomen above narrowly bordered behind with yellow, the band on the fifth segment interrupted in the middle: legs yellow, femora black in the middle above (hind femora almost all round), extremities of the tibiæ and of the joints of the tarsi black, hind tarsi wholly black, hind coxæ black at the base. Wings yellowish hyaline, with reddish-brown nervures; basal half of the stigma yellow.

The type is labelled "*dahlü*." It does not agree with the description of *Tenthredo* (*Allantus*) *dahlü*, Klug, but is allied to *M. postica*, Brullé.

*Hab.* Albania.

*Hab.* Idria.

61. *Macrophya corynetes*.

(Plate X. fig. 3.)

Exp. al. 9 lin., long. corp. 4 lin.

Rufous; antennæ (except the basal joint), a large spot on the vertex enclosing the ocelli, spots on the frontal and lateral lobes of

the thorax (the two latter connected behind), the pectus, and the greater part of the metathorax and abdomen above, except at the sides and tip, black; a black line on the four anterior tibiæ and tarsi above: hind tarsi mostly black. Wings hyaline, with fuscous nervures; costa and stigma yellowish; lanceolate cell with short straight cross line. Antennæ with the third joint very long, and the succeeding joints short and almost fused together into an elongated club.

*Hab.* Algeria\*.

a. b. ♀. (Types.)

Algeria.

### 62. *Macrophya lucasii*.

(Plate X. fig. 2.)

Exp. al. 9 lin., long. corp. 4 lin.

Black: abdomen with segments 3-5 red above only; labrum, clypeus, cenchri, a line at the extremity of the first segment of the abdomen above, and legs testaceous; a line down the first pair of legs and the middle tibiæ above, all the femora except at the base and tip, and the tips of the hind femora and the hind tarsi, and the tips of the joints of the intermediate tarsi, black. Wings yellowish hyaline, with fuscous nervures; stigma yellowish in front; lanceolate cell with straight cross nervure. In the *male*, segments 3-5 of the abdomen are red below as well as above, there is a black line on the four front legs above, and the hind legs are black below the middle of the femora above and beyond the base of the tibiæ beneath; the joints of the tarsi are also testaceous at the base beneath.

*Hab.* Algeria.

a-c. ♂ ♀. (Types.)

Algeria.

### 63. *Macrophya cognata*.

(Plate X. fig. 5.)

Exp. al.  $8\frac{1}{2}$  lin., long. corp.  $3\frac{1}{2}$  lin.

Black; abdomen rufous beneath, and on segments 3-5 and the sides of 6 above; segment 3 has a black spot in the middle in front. Face and legs yellowish, coxæ black except at the tips, femora with a black line above, and coxæ black above; extremity of the abdomen yellowish beneath. Wings hyaline, with fuscous nervures, yellow costa, and pale testaceous stigma; lanceolate cell with short straight cross line.

*Hab.* Algeria.

a. ♂. (Type.)

Algeria.

\* In the Algerian species the hind coxæ are not remarkably long or large; but their short, stout, thickened antennæ prevent their being referred to *Tenthredo*, and I prefer to assign them to *Macrophya* for the present.

G. Lewis, Esq.

72. *Macrophya luctifera*.

(Plate X, fig. 8.)

*Macrophya luctifera*, *Smith, Trans. Ent. Soc. Lond.* 1874, p. 380.

Exp. al. 6 lin., long. corp. 3½ lin.

Shining black: tips of anterior femora in front, and tibiæ also in front, hind trochanters, base of tibia outside, and cenchri white. Wings fuscous, nervures black: stigma white at base.

*Hab.* Japan.

a ♀. (Type.)

Hiogo.

G. Lewis, Esq.

73. *Macrophya carbonaria*.

(Plate X, fig. 6.)

*Macrophya carbonaria*, *Smith, Trans. Ent. Soc. Lond.* 1874, p. 380.

Exp. al. 11 lin., long. corp. 5 lin.

Black, shining: pectus dull: head and thorax punctured, most deeply on the pectus: abdomen more finely punctured. Head, thorax, and legs covered with a short grey pubescence. A spot on each side of the clypeus, its anterior margin, the base of the mandibles, the anterior tibia in front, and the tip of the femora, a large oval spot on the hind coxæ, and the middle of the hind tibia above, white. Wings yellowish hyaline, with fuscous nervures: costæ and stigma black: lanceolate cell with straight cross nervure.

*Hab.* Japan.

a ♀. (Type.)

Hakodadi.

H. Whitely, Esq.

74. *Macrophya timida*.

(Plate X, fig. 7.)

*Macrophya timida*, *Smith, Trans. Ent. Soc. Lond.* 1874, p. 380.

Exp. al. 10 lin., long. corp. 4½ lin.

Black, punctured as in *M. carbonaria*, but not pubescent: base of the mandibles, front of the anterior legs from near the extremity of the femora downwards, front of the intermediate legs from the middle of the tibiæ, a large oval spot on the hind coxæ, and the trochanters, including the adjacent portions of the coxæ and femora, whitish or testaceous. Wings hyaline, with black nervures: lanceolate cell contracted.

But for the difference in the lanceolate cell I should scarcely have considered this species to be distinct from *M. carbonaria*.

*Hab.* Japan.

76. *Macrophya apicalis*.

(Plate X. fig. 9.)

*Macrophya apicalis*, *Smith, Trans. Ent. Soc. Lond.* 1874, p. 378.

Exp. al. 9 lin., long. corp. 5 lin.

Black: the four last joints of the antennæ (except the extreme apex of the last), labrum, base of mandibles, front of anterior tibiæ and tarsi, a large oval spot on the outside of the hind coxæ, hind trochanters, and adjacent portions of the coxæ and femora whitish. Wings hyaline, with fuscous nervures; lanceolate cell subcontracted. Head, thorax, and pectus closely punctured; abdomen more shining.

*Hab.* Japan.

*a-c.* ♀. (Types.)

Hakodadi.

H. Whitely, Esq.

77. *Macrophya flavomaculata*.

(Plate X. fig. 10.)

*Allantus flavomaculatus*, *Cameron, Trans. Ent. Soc. Lond.* 1876, p. 464.

Exp. al. 13 lin., long. corp. 6 lin.

Black, shining; sides of pectus opaque, punctured; antennæ (except the three or four last joints, which shade into blackish), face, a long spot on the back of the vertex, collar (broadly), and the edge of the pectus below, at a right angle, a spot on each side of the front of the pectus (sometimes), two spots in the middle of the thorax, scutellum, postscutellum, and cenchri, the hinder edge of all the segments of the abdomen (obscured in the types, which are apparently discoloured from having been in spirit), and the legs, yellow. Hind legs with the coxæ black nearly to the extremity, with a round yellow spot on the side; hinder half of the femora, and the tips of the tibiæ, with their long spurs, yellow. Head pilose. Wings yellowish hyaline, with yellowish nervures; clouded at the extremity; costa and stigma blackish; lanceolate cell subcontracted.

*Hab.* China.

*a-e.* ♀. (Types.)

Shanghai.

R. Fortune.

\* I cannot find any specimens of this species in the collection.

78. *Macrophya nigropicta*.

(Plate X, fig. 12.)

*Macrophya nigropicta*, *Smith, Trans. Ent. Soc. Lond.* 1874, p. 377.

Exp. al. 12 lin., long. corp. 5 lin.

Head yellow; a large irregular roundish black spot on the vertex, enclosing the ocelli, and sometimes marked with two small yellow spots in front; it throws off a small projection in front, and a broader one behind; and there is also a black spot on each side of the latter, extending to the back of the head, which is wholly black, as well as the antennæ. There is also a rather large black spot behind each eye. Mesothorax above and middle of pectus black; prothorax, V-spot, two large impressed spots behind, sometimes scarcely separated from it, scutellum, postscutellum, and lines running from the scutellum to the front and back of the base of the fore wings, all yellow. Abdomen yellow, with a black band at the base of all the segments above; saws, and two short streaks at their base, black; legs yellow, intermediate tarsi blackish above; hind femora at the extremity above, and hind tibiae and tarsi (except more or less of the base of the former) black. Wings hyaline, faintly tinged with yellow towards the extremities; nervures fuscous; lunulate cell with straight cross nervure.

This species is more like a *Teuthis* than a *Macrophya* in shape, colour, and markings, but has the long hind coxæ of the latter genus.

*Hab.* Japan.*a, b.* ♀. (Types.)

North Japan,

R. Fortune.

B. *North-American Species.*79. *Macrophya abbotii*.

(Plate X, fig. 14.)

Exp. al. 12-13 lin., long. corp. 6 lin.

Black; abdomen with segments 3-5 rufous, both above and below; also segment 2 beneath, and the hind coxæ beneath, in the male only. Legs piceous or rufescent; wings violaceous, with blackish nervures.

This species may possibly be identical with *Teuthrodopsis atroviolaceus*, var. *cinctulus*, Nort., described from female examples only; but there is no trace of a white spot on the coxæ. Norton would probably have mentioned its absence, had it been absent in his specimens of *cinctulus*; for this spot is present in *atroviolaceus*, var. *trivius*, between which and the typical *atroviolaceus cinctulus* would be intermediate.

*Hab.* Georgia\*.

11. *Pachyprotasis erratica*.

(Plate X. fig. 16.)

*Pachyprotasis erraticus*, *Smith, Trans. Ent. Soc. Lond.* 1874, p. 377.

Exp. al. 8 lin., long. corp. 4 lin.

Black; undersurface of antennæ, face, cheeks, a short oblique streak on the vertex behind and within each eye, a spot on each side of the front lobe of the thorax, tegulæ, scutellum, cenchri, a triangular spot at the base of the abdomen and the greater part of the legs and undersurface of the abdomen whitish or testaceous; third and fourth segments of the abdomen with a short white line on the hinder edge above. Pectus black, closely punctured, with two adjacent testaceous spots in the middle, and a white stripe on the sides, with a shorter white stripe running upwards at a right angle at both ends. All the legs with a black line above, even extending to the hind coxæ; hind tibiæ entirely black, except a short pale line towards the extremity beneath; hind tarsi wanting. Segments of the abdomen bordered with black in the middle beneath. Wings hyaline, with piceous nervures; lower part of the stigma reddish.

*Hab.* Japan.

a. ♂. (Type.)

14. *Tenthredo caliginosa*.

(Plate XVI, fig. 14.)

*Tenthredo caliginosa*, *Steph. Ill. Brit. Ent., Mond.* vii. p. 75 (1835).

Exp. al. 11 lin., long. corp. 6 lin.

Black; face, inner orbits of eyes, and scutellar spots yellow; antennae reddish beneath. Legs dull reddish; base of front femora, middle femora beneath, hind femora wholly, and hind tibiae beneath blackish or dark reddish brown. Wings yellowish hyaline, with brown nervures; stigma brown, with the base pale.

The *male* has only the hind femora, tibiae, and first joint of the

tarsi blackish; the hinder half of the femora and the greater part of the tibiæ are pale beneath; sometimes the hind femora only are blackish. (The two male specimens were placed with *T. microcephala*, but appear rather to belong to the present species.)

*Hab.* Europe.

(Plate XVI. fig. 5.)

Exp. al. 13 lin., long. corp.  $5\frac{1}{2}$  lin.

Olive-yellow (perhaps somewhat faded?) beneath, and varied with black above. Vertex entirely black, as far as the antennæ, except a very narrow line within the eyes; antennæ short, black; palpi and tips of mandibles reddish brown; mesothorax black above; V-spot, hinder borders, and all the scutellar spots pale; sides of pectus marked with two slender black lines, connected above, and a shorter one below. Abdomen pale, with a black band on each segment, broad in the middle and tapering at each side; in front of the points are some more obscure blackish marks. All the femora with a black line above; four front tibiæ with a brown line; hind tibiæ and tarsi darker brown, with pale spurs. Wings hyaline, slightly clouded towards the tips; nervures brown, stigma reddish brown.

\* The late Mr. F. Smith regarded this species as identical with his *T. erratica*, from which it differs in wanting the black spots on the thorax; the face and the spot on the hind coxæ are more distinctly yellow. The amount of black on the apical half of the abdomen, as also the distinctness of the dusky tip to the fore wings, varies slightly in different specimens. There are also more or less distinct blackish lines at the base of the first two segments of the abdomen. One specimen has a reddish spot on the pleura; another a shining reddish line within the eyes. In the male, the pectus, abdomen, and base of the coxæ are of the same tawny colour as the rest of the insect.

Allied to *T. pallicornis*, from which its black antennæ will at once distinguish it. It much resembles *Macrophya* (?) *nigropicta*, Smith, from Japan (*ante*, p. 269); but the legs are differently coloured. The head and thorax are darker above, and there is no black spot in the middle of the pectus.

*Tenthredo erratica*, *Smith, Trans. Ent. Soc. Lond.* 1874, p. 381.

Exp. al. 1 poll. 5 lin., long. corp. 8 lin.

Shining rufo-testaceous; a spot on the vertex around the ocelli, behind which are two deep depressions, lined with black, extending quite to the back of the head. Thorax with black spots on the frontal and lateral lobes; apical half of the abdomen black, both above and below. Face, a line in front of the four front coxæ, and a large lateral spot at the base of the hind coxæ testaceous; pectus wholly black; four front coxæ black at the base. Wings yellowish hyaline, with piceous nervures; costa and stigma yellow; fore wings dusky at the tips.

Motshulsky only mentions one spot on the thorax; otherwise his description agrees with this species. Smith states that the male has black antennæ, except the two basal joints; but no such specimen exists in the British Museum, and the remark would probably apply better to the male of *T. xanthotarsis*. The Siberian specimens of *erratica*, alluded to by Smith, appear to belong to *T. fulva*, Klug.

### 100. *Tenthredo varipes*.

(Plate XI. fig. 5.)

Greenish yellow; antennæ black, the first joint yellow beneath; a large black spot on the vertex, including two small yellow spots in front; mesothorax and middle of abdomen and middle of pectus black; scutellum, four spots in front, two postscutelli, cenchri, and sides of abdomen of the ground-colour, the latter colour running into the black at the back of each segment. Legs greenish yellow, a black line running from the middle of the femora to the tips of the tibiæ; tips of tibiæ and of all the joints of the tarsi black. Wings hyaline, partly tinged with yellowish; costa and stigma yellow.

*Hab.* Japan.

a. ♀. (Type of species.)                                      Tokio.                                      Montague Fenton, Esq.

### 101. *Tenthredo xanthopus*.

(Plate XI. fig. 12.)

*Tenthredo xanthopus*, *Cameron, Trans. Ent. Soc. Lond.* 1876, p. 467.

Exp. al. 1 in., long. corp. 5 lin.

Black; abdomen steel-blue; face, cheeks, space between the

antennæ, collar, tegulæ, a large stripe on the sides of the pectus, a narrower one behind, hind coxæ, scutellum, postscutellum, a triangle at the base of the abdomen, and a stripe down the middle above, whitish. Legs and undersurface of abdomen yellowish; tarsi ringed with black; a dark line on all the femora above and on the intermediate tibiæ; hind tibiæ and tarsi black. Wings hyaline, iridescent, with blackish nervures and stigma.

*Hab.* Japan?

a. ♀. (Type.)                      Japan? or North India?

### 102. *Tenthredo eburneifrons.*

(Plate XI. fig. 3.)

Exp. al. 1 poll., long. corp. 6 lin.

Black; clypeus, joints 6-8 of the antennæ, labrum, mandibles (except the rust-coloured tips), a spot at the base of the hind coxæ, and another on the sides of the first segment of the abdomen ivory-white; tegulæ light brown. Abdomen with segments 5 and 6 reddish above, segment 7 above and 5 below stained with the same colour. Legs reddish, femora more or less black above; coxæ black, their tips and the trochanters dirty white. Wings hyaline, with brown nervures; costa yellowish; stigma dark brown.

Appears to be allied to *T. rudowi*, André.

*Hab.* Amoor.

-------	----------------

108. *Tenthredo antennata.*

(Plate XII. fig. 1.)

Exp. al. 1 poll., long. corp. 6 lin.

Black; abdomen blue-black; four last joints of the antennæ, labrum, base of mandibles, cenchri, and a spot on each side of the basal segment of the abdomen yellowish; the four anterior tibiæ and tarsi dull testaceous. Wings hyaline and iridescent, clouded beyond the middle, with piceous nervures. One specimen has a red spot in the middle of the thorax.

a, b. ♀. (Types.)	Nova Scotia.	Lieut. Redman.
-------------------	--------------	----------------

109. *Tenthredo nigricollis.*

(Plate XII. fig. 3.)

Exp. al. 10 lin., long. corp. 5 lin.

Black; antennæ pale yellow beyond joint 5 (two last joints broken off); mouth and two spots above the posterior coxæ pale yellow; four anterior tibiæ, tarsi, and tips of femora testaceous. Wings yellowish hyaline, with brown nervures and black stigma.

May be distinguished from *T. grandis* and *T. antennata* by the collar not being yellow.

177. *Tenthredo vittata*.

(Plate XII. fig. 14.)

Exp. al.  $10\frac{1}{2}$  lin., long. corp. 5 lin.

Chestnut-red; ocelli and a small spot between and beneath each antenna black; face yellow, clypeus very deeply concave, mandibles red. Thorax red, with three black spots above, and the middle of the pectus black; collar and tegule yellow. Abdomen red above, and black to the middle below; two yellow spots above the hinder coxæ; the first four segments above are narrowly edged with black behind, this is interrupted in the middle on the third, but more widely on the fourth; the sixth segment is marked with a small black spot on each side; and the saws are black. Coxæ black; legs reddish; front femora with a black line at base above; four hinder femora mostly black; four front tibiae yellowish beneath; hind tibiae yellow. Wings yellowish hyaline, with yellow nervures; stigma reddish brown at the extremity.

*Hab.* Hudson's Bay.

Dr. Barnston.

178. *Tenthredo castanea*.

(Plate XII. fig. 17.)

Exp. al. 11 lin., long. corp. 5 lin.

Chestnut-red; face yellow, tips of mandibles red, middle of pectus black. Fore wings yellowish hyaline, with yellow and brown nervures; costa yellow; stigma brown at the extremity; hind wings clear hyaline, with brown nervures.

*Hab.* Hudson's Bay.

*a.* ♀. (Type.)

St. Martin's Falls,  
Albany River.

Dr. Barnston.

179. *Tenthredo* (?) *aperta*.

(Plate XII. fig. 16.)

Exp. al.  $9\frac{1}{2}$  lin., long. corp. 4 lin.

Head pale yellow; a large black spot, trifold in front, covers the middle of the vertex from the occiput to the antennæ, but does not extend to the eyes: antennæ black, joints 5-8 yellow, joints 3 and 4 of equal length. Thorax black above; V-spot, scutellum, and post-scutellum yellow; tegulæ and cenchri more reddish; pectus reddish in the middle, the sides yellow, bordered with black before and behind. Abdomen testaceous, black at the base, and with a broad blackish band on the middle of each segment above, except towards the extremity. Legs rufo-testaceous or yellowish: intermediate tibiæ black at the base, and three last joints of intermediate tarsi black; base of hind femora above, and hind tibiæ except at the tips, black. Wings hyaline, with brown nervures; base of wings and of stigma yellowish.

This species does not agree very well with *Tenthredo*: the antennæ are long and slender, quite as long as the body, and the third and fourth joints are of equal length; the wings are long, and the lanceolate cell is open; the abdomen is flattened and comparatively short, and the hind coxæ extend as far as the third segment.

Orizaba.

M. Sallé.

C. *Indian Species.*180. *Tenthredo smithii*.

(Plate XI. fig. 9.)

Exp. al. 14 lin., long. corp. 7 lin.

Closely allied to *T. fortunii*, Kirby (*antè*, no. 105. p. 307); but the collar, V-spot, two marks on the thorax behind, scutellum, the sides of the pectus, the sides of the coxæ, and the four basal joints of the abdomen are yellowish. Four hinder femora with a short black line above at the base; no distinct lines on the other parts of the legs.

*Hab.* India.

a. ♀. (Type.)

India.

From the late F. Smith's  
Collection.181. *Tenthredo fallax*.*Tenthredo fallax*, *Smith, 2nd Yarkand Miss.* p. 20 (1878).*Hab.* Kashmir; Punjab.

182. *Tenthredo latifasciata*.

(Plate XI, fig. 15.)

*Tenthredo latifasciata*, *Cameron, Trans. Ent. Soc. Lond.*, 1877, p. 87.Exp. al. 1 poll., long, corp.  $5\frac{1}{2}$  lin.

Black: mandibles, cenchri, and a spot on segments 2-4 of the abdomen white; legs reddish beyond the base of the femora; hind tarsi brown; head and thorax pubescent, finely punctured. Antennae rather long, third joint not much longer than fourth; second joint reddish.

*Hab.* India.

a. ♀. (Type.)

India.

183. *Tenthredo indica*.

(Plate XI, fig. 18.)

*Tenthredo indica*, *Cameron, Trans. Ent. Soc. Lond.*, 1876, p. 468.

Exp. al. 11 lin., long, corp. 5 lin.

Black: antennae long, joint 3 and base of joint 4 of the right antenna, face below the antenna, a broad circle round the eyes (incomplete behind collar), V-spot, scutellum and two post-clypea, and two large spots on the pleura white; a white band on the sides of each segment of the abdomen below, not meeting in the middle, and on the first five segments above, the third nearly, and the two last completely, united. Legs white; front tibia with a black line above, and extremities of the joints of the tarsi black; four hinder femora black above, as well as the apical half of the tibiae, the tips of the first two joints of the tarsi, and almost the whole of the remainder. Wings rufescent hyaline, with blackish nervures, the apical third purplish hyaline.

*Hab.* North India.

a. ♂.

North India

Capt. Boyes.

184. *Tenthredo melanotarsus*.

(Plate XI, fig. 10.)

*Tenthredo melanotarsus*, *Cameron, Trans. Ent. Soc. Lond.*, 1876, p. 467.

Exp. al. 1 poll. 2 lin. to 1 poll. 5 lin., long, corp. 6-8 lin.

Testaceous or reddish; antennae, except at the base, tips of mandibles, and hind tarsi black; face whiter than the ground-colour; segments 2 and 3 of the abdomen bordered with black behind above; last three or four segments violet-black. Wings deep yellowish hyaline, with yellow nervures; tip dusky, commencing with

a deep violaceous blotch on the costa, throwing off a smoky streak towards the inner margin.

*Hab.* China : North India.

<i>a-c.</i> ♀. (Types.)	Shanghai.	R. Fortune.
<i>d.</i> ♀.	Nepal.	Gen. Hardwicke.
<i>e.</i> ♀.	Bootan.	Dr. Pemberton.
<i>f.</i> ♂.	North India.	Dr. Pemberton.

### 185. *Tenthredo xanthoptera.*

(Plate XI. fig. 13.)

*Tenthredo xanthoptera*, *Cameron, Trans. Ent. Soc. Lond.* 1876, p. 467.

Exp. al. 1 poll. 4 lin. to 1 poll. 6 lin., long. corp. 6 lin.

Rufo-testaceous; antennæ, except at the base, tips of mandibles, ocelli, hind tibiæ and tarsi, and the claws and pulvelli of the intermediate tarsi black. Wings deep yellowish hyaline, with yellowish nervures; tips uniform brown, with a violet iridescence, most distinct on the under surface.

This species appears to be scarcely distinct from *T. melanotarsis*, *Cam. (antè, p. 321)*.

*Hab.* North India.

<i>a.</i> ♀. (Type.)	Nepal.	Gen. Hardwicke.
<i>b.</i> ♀.	Bootan.	Dr. Pemberton.

### 186. *Tenthredo simulans.*

*Tenthredo simulans*, *Cameron, Trans. Ent. Soc. Lond.* 1877, p. 87.

*Hab.* India.

### 187. *Tenthredo simulata.*

*Tenthredo simulata*, *Smith, Second Yarkand Miss.* p. 19 (1878).

*Hab.* Kashmir.

### 188. *Tenthredo nigromaculata.*

*Tenthredo nigromaculatus*, *Smith, Second Yarkand Miss.* p. 20 (1878).

*Hab.* Kashmir.

### 189. *Tenthredo clypeata.*

(Plate XII. fig. 5.)

*Tenthredo clypeata*, *Cameron, Trans. Ent. Soc. Lond.* 1876, p. 466.

Exp. al. 1 poll. 2 lin. to 1 poll. 3 lin., long. corp. 6-7 lin.

Dark green, more or less shining; thorax coppery, head rugose,

antennæ black, clypeus yellowish. Fore wings dusky hyaline, with green nervures and blue and green reflections, especially towards the base; hind wings hyaline.

*Hab.* North India.

*a, b.* ♀. (Types.)

North India.

Capt. Boyes.

190. *Tenthredo coccinoceras*\*.

(Plate XII. fig. 11.)

*Tenthredo coccinocerus*, *Wood, Insects Abroad*, p. 388, fig. 188 (1874).

*Tenthredo metallica*, *Cameron, Trans. Ent. Soc. Lond.* 1876, p. 466.

Exp. al. 1 poll. 5 lin., long. corp. 7 lin.

Brilliant metallic green; abdomen above blue; antennæ purple, rather long, with an unusually long basal joint; tibiæ and tarsi mostly purple. Fore wings smoky hyaline, with green nervures, and blue and green iridescent reflections; hind wings hyaline, slightly clouded towards the tips.

*Hab.* North India.

*a, b.* ♀. (Types.)

Darjiling.

Messrs. Schlagintweit.

191. *Tenthredo* (?) *coxalis*†.

*Tenthredo coxalis*, *Smith, Journ. Linn. Soc., Zool.* ii. p. 116 (1858).

*Hab.* Singapore.

D. *South-American Species.*

192. *Tenthredo* (?) *delicatula*.

(Plate XII. fig. 8.)

Exp. al. 5 lin., long. corp. 2½ lin.

Head and antennæ black; prothorax above and at the sides, mesothorax above (except a large shining black spot in front and one on each side near the base of the hind wings), and scutellum bright red; postscutellum, cenchri, and a line behind the first segment of the abdomen paler crimson; abdomen, undersurface, and legs light brown. Wings smoky hyaline, with brown nervures; the division between the first and second submarginal cells nearly obsolete.

*Hab.* Venezuela.

*a.* ♂. (Type.)

Venezuela.

E. Dyson.

\* So named on account of its purple (!) antennæ: but a name once given, even if erroneous, cannot be set aside.

† There is no clue to the genus of this species in the description. It is, perhaps, not a true *Tenthredo*.

## 102. DIPTEROMORPHA.

Wings long and narrow: fore wings resembling those of a *Tipula* in shape, with two marginal cells, the dividing line curved almost at a right angle, and four submarginal cells, the second marked with a horny point—the second receiving the first recurrent nervure at an acute angle, and the third receiving the second at a right angle: lanceolate cell long and narrow, with a straight cross line at about one third of its length. Hind wings with two large middle cells. Antennæ slender, 9-jointed, the fourth joint a little longer than the third, the rest gradually diminishing: all the joints are thickened, and the second emits a small tooth on the inside at the extremity. Head and thorax of moderate size: abdomen linear, long and narrow. Legs long and slender, hairy: tibiæ with two long terminal spurs: joints of the tarsi much widened at the extremity, with short strong spines.

This curious insect is not closely allied to any described genus of *Tenthredinidæ*.

1. *Dipteromorpha rotundiventris*.

(Plate XIII. figs. 1, 1 a.)

*Macrophya rotundiventris*, *Can. Trans. Ent. Soc. Lond.* 1876, p. 465.

Exp. al.  $13\frac{1}{2}$  lin., long, corp. 6 lin.

Head black: face and first two joints of antennæ yellowish white, the remaining joints rufo-testaceous, darkest at the joints and towards the tips. Thorax reddish above and on the sides in front: pectus and base of four hinder coxæ black; two large spots on middle of mesothorax above, a dot at the base of the hind wings, metathorax, and first segment of the abdomen above black: cenchri pale. Abdomen rufo-testaceous, with a shining black stripe on each side above, meeting on the last two segments: anal segment black beneath. Legs yellowish white, shading into rufo-testaceous on the tarsi and tibiæ above: intermediate femora with a short black line towards the extremity above: hind coxæ black above almost to the extremity: hind femora with a black stripe on each side, and hind tibiæ black, except at the base. Wings yellowish hyaline, with piceous nervures: tip dusky: costal cell and stigma yellow, the former bordered below, and separated from the stigma by black nervures.

*Hab.* North India

a. ♂. (Type.)

Masuri.

Capt. Laing.

## 103. HYPOLÆPUS.

Shape of *Tenthredo*. Antennæ with the first two joints very small: joint 3 slightly curved, joints 3-6 of about equal length;

the remainder broken off. Wings with one marginal and four sub-marginal cells, the second receiving both recurrent nervures, and marked with the usual black point: the first small, third and fourth moderate, the third not much smaller than the second; lanceolate cell petiolate; hind wings with two middle cells. Abdomen long; hind coxæ extending as far as the third segment; hind femora and tibiæ slightly dilated and flattened.

The position of this genus is uncertain. It has some affinities with the *Nematinae*.

### 1. *Hypolæpus abbotii*.

(Plate XIII. fig. 2.)

Exp. al. 11 lin., long. corp. 6 lin.

Blue-black, shining; third segment of the abdomen testaceous on the sides, and less distinctly so above. Wings iridescent, clear hyaline towards the base, and more dusky beyond, with blackish nervures.

*Hab.* North America.

*a.* ♀. (Type.)

Georgia.

Probably from Abbot's collection.

### 104. AGLAOSTIGMA.

Head transverse, not much extended back of eyes: antennæ long and slender, each joint dilated at apex, joint 3 longer than joints 4 and 5, which are of equal length, the remainder shorter. Abdomen moderately long and broad; hind coxæ extending as far as the third segment of the abdomen. Wings with two marginal and four sub-marginal cells; lanceolate cell with straight cross line; hind wings with one middle cell.

### 1. *Aglaostigma eburneiguttatum*.

(Plate XIII. figs. 3, 3*a*.)

Exp. al. 8 lin., long. corp. 4 lin.

Pale luteous; face, orbits, cheeks, with an adjoining stripe on each side at the back of the head, extending in points almost to a square spot behind the ocelli, two dots between the antennæ, and a triangle below, all ivory-white; collar, tegulæ, a large triangle in the place of a V-spot, scutellum, two post-scutella (separated by a black mark), cenchri, sides of pectus (which are intersected by black lines), sides of coxæ, and a stripe before each pair of coxæ (divided in the middle and bordered by narrow black lines) of the same colour. Abdomen with all the segments above narrowly bordered with black behind, and with a row of small black dots on each side.

*Hab.* Siberia.

*a.* ♀. (Type.)

Angara.

## 6. Waldheimia dorsilinea.

Tenthredo dorsilinea, *Costa, Ann. Mus. Nap.* ii. p. 67 (1868).

*Hab.* Amazons?

---

\* The species which I place in this genus are rather large, with deep yellowish-hyaline wings, generally with a dusky border; and the lanceolate cell is always open. The genus is quite distinct from *Macrophya*, to which Norton seems inclined to refer it. It has some affinities with the *Selandrinæ* and *Loboccratinæ*.

† The specimen from Demerara has paler wings, with narrower and paler tips. It may be a distinct species.

7. *Waldheimia batesii*.

(Plate XIII. fig. 4.)

Exp. al. 1 poll., long. corp. 5 lin.

Testaceous: antennæ except the basal joint, ocelli, two stripes on the thorax, tips of hind tibiæ, hind tarsi, the last two joints of the front tarsi, and most of the intermediate tarsi below the basal joint black. Wings deep yellowish hyaline, with yellowish nervures, not clouded at the tips.

*Hab.* Amazons.*a, b.* ♀. (Types.)

Para.

*Hab.* Europe.

a. ♂.	Europe.
-------	---------

\* These specimens have black antennæ, with the first joint ferruginous, but otherwise agree with *M. flavicornis*.

† This specimen only differs from European examples by the second and third segments of the abdomen being unspotted.

6. *Megalodontes flabellatus*.

*Tarpa flabellata*, *Eversm. Bull. Mosc.* xx, pt. i. p. 57 (1847).

*Hab.* Kasan.

7. *Megalodontes fabricii*.

(Plate XIII. fig. 5.)

*Tarpa fabricii*, *Leach, Zool. Misc.* iii. p. 130. n. 1 (1817): *Zaddach, Schrift. Königsb.* vi. p. 195, n. 5 (1865).

*Tarpa megacephala*, *Klug, Ent. Monogr.* p. 190, n. 6 (1824).

Exp. al. 1 poll., long. corp. 6 lin.

Black, with pale yellowish-white markings: antennæ rufous, with the two basal joints black: a pale spot between the eyes and antennæ (none between the antennæ), and a pale line on the back of the head. Thorax with the anterior angles, a spot on each side near the scutellum, and a spot on the pleura pale. Abdomen with the basal membrane pale, and pale bands on the fourth, fifth, and eighth segments, that on the fifth attenuated: sixth with a pale spot on each side: undersurface with three pale stripes, the first very short. Legs rufous: four anterior femora black at the base. Wings yellowish hyaline, darkest towards the costa.

*Hab.* Europe.

*a.* ♀. (Type.)

Exp. al. 8 lin., long. corp. 4 lin.

Head pale ochreous: antennæ reddish, 19-jointed, the first two joints spotted with black; two black spots below the antennæ, and six on the vertex; tips of the mandibles reddish, shading into black. Thorax pale ochreous, with a large black spot on each side at the base of the fore wings, and three in the middle; frontal lobe edged with black, and the metathorax and hinder edges of the mesothorax black; scutellum black, edged with pale ochreous. Abdomen black above, edged at the sides and tip with pale ochreous; each segment very narrowly edged with ochreous behind. Middle of pectus black, and sides with irregular black markings; otherwise the under surface is still paler ochreous than above, though the legs are darker, slightly inclining to luteous; femora with a black line above. Wings yellowish hyaline, with yellow nervures and stigma.

55. *Pamphilius flavifrons*.

(Plate XIII. fig. 7.)

Exp. al. 8 lin., long. corp. 4 lin.

Closely allied to *P. cingulatus*. Black, with yellow and reddish markings. Head coarsely punctured in front, and smooth behind;

antennæ dark chestnut, with the basal joint black. Face yellow, as far as the middle of the eyes; a short black stripe running down to the base of each antenna: cheeks broadly yellow, the colour bifurcating above; two yellow lines on the occiput running to the eyes, and two short yellow lines within them at the base of the usual grooves. Prothorax, a divided triangular spot in front of mesothorax, scutellum, and postscutellum yellow. Pectus black, with two yellow spots before the front coxæ and three large ones on the sides; legs yellowish, shading into rufous-brown at the extremities. Abdomen black above, segments 3-5 and the terminal segment mostly reddish; beneath dull reddish or yellowish, finely punctured, with a black band on the fourth and a narrower one on the fifth segment, and the last segment almost wholly yellow.

### 56. *Pamphilius venustus*.

(Plate XIII. fig. 11.)

*Lyda venustus*, *Smith, Trans. Ent. Soc. Lond.* 1874, p. 384.

Exp. al. 1 poll. 1 lin., long. corp. 6 lin.

Black; segments 2-5 of the abdomen dull orange. Head and thorax closely punctured; face and cheeks reddish; clypeus, part of the outer edge of the mandibles, and the palpi yellow; a yellow stripe behind each eye, extended to the occiput, and two short grooves between the aforesaid stripes, yellow; antennæ with the basal joint yellowish, then reddish to two thirds of their length, and the apical third blackish; prothorax, scutellum, and postscutellum yellow; legs ochreous, femora yellow; abdomen beneath with three yellow transverse stripes, one on the fifth segment on an orange ground, and two on the following black segments. Wings yellowish hyaline, with piceous nervures, tips clearer; stigma black, with a yellow spot on the inside; costal cell clear, edged with yellowish in front.

*Hab.* Japan.

### 57. *Pamphilius volatilis*.

(Plate XIII. fig. 13.)

*Lyda volatilis*, *Smith, Trans. Ent. Soc. Lond.* 1874, p. 384.

Exp. al. 9 lin., long. corp. 4½ lin.

Black; clypeus, cheeks, three spots between the eyes, a curved line behind them, edges of collar, tegulae, a triangular spot in front

of thorax, divided in the middle, scutellum, spot on pleura, and sides and transverse stripes on abdomen pale yellowish white; legs darker, hind tarsi blackish.

*Hab.* Japan.

*a.* ♀. (Type.) North Japan.

### 58. *Pamphilius smithii*.

(Plate XIII, fig. 14.)

*Lyda latifrons*, *Smith (nec Fall.)*, *Trans. Ent. Soc. Lond.* 1874, p. 385.

*Exp. al.* 10 lin., long, corp. 5 lin.

Black; clypeus, palpi, and base of mandibles yellow; cheeks yellow, connected on one side with a yellow line which runs up from the corners of the clypeus between the eyes and antennae, and on the other with a stripe curving round the back of the head, sending off a branch to the back of the eyes, and nearly meeting the other; between the antennae is a square yellow spot. Edges of collar, a triangular spot in front of thorax, scutellum, postscutellum, two large stripes on the sides of the pectus, and legs pale yellow. Abdomen with all the segments narrowly bordered with yellow above; sides and undersurface mostly yellow, except at base. Wings clear hyaline; stigma black; nervures black or piceous.

*Hab.* Japan.

*a.* ♀. (Type.) Japan.

### 59. *Pamphilius sulphureipes*.

(Plate XIII, fig. 12.)

*Exp. al.* 11 lin., long, corp. 5 lin.

Black; palpi yellow, and base of the mandibles obscurely yellowish; from the back of the head runs a sulphur-yellow line on each side, curving forwards within the eyes; a double yellow spot between or rather just above the antennae; two deep grooves on the vertex, scarcely marked with yellow; tegulae and V-spot sulphur-yellow; scutellum and postscutellum darker yellow; legs uniform sulphur-yellow, shading into greenish at the ends of the tibiae, with only the tips of the claws black; hinder half of segments 3-6 of the abdomen dull yellow beneath. Wings clear hyaline, with a very slight yellowish tinge; nervures and stigma piceous; second brachial cell with incomplete cross nervure.

*Hab.* Amoor.

Exp. al. 11 lin., long. corp. 5 lin.

Black; antennæ rufous, basal joint black; head finely punctured; an oblique spot outside the base of each antenna, a small spot on each side above these, and two oval spots on the vertex, with a carina in the middle of each, yellow; outside these is a narrow yellow line, connected at an acute angle with a large yellow curve, running round the cheeks to the base of the mandibles, which are

---

\* The three specimens in the collection vary a little, but appear to belong to the same species.

red; clypeus yellow; the V-spot is yellow, and composed of two right-angled triangles, with a carina between; on each side of the thorax is an oblique tulip-shaped yellow spot. Thorax more finely punctured than the head; abdomen rufous above, black at base and tip; pectus black; scapulae, pleura, and two spots in front of the anterior coxæ yellow; back of pectus narrowly edged with yellow at the sides, and three yellow spots on each side of the base of the abdomen. Abdomen rufous beneath, the terminal segments banded with black in the middle; legs rufous, femora mostly black. Wings hyaline; stigma black, a shade running from it obliquely towards the hinder angle of the fore wings; second brachial cell with merely the commencement of a cross line; front tibiæ with no side spurs.

113. *Pamphilius rileyi*.

(Plate XIII. fig. S.)

*Lyda rileyi*, *Cress. Trans. Amer. Ent. Soc.* viii. p. 32 (1880).

Exp. al. 7 lin., long. corp.  $3\frac{1}{2}$  lin.

Black: head pale yellow, with two deep sulci on the vertex; neighbourhood of the ocelli black, this colour extending forwards below the antennæ in the middle, though there is a yellow ring between them, and a yellow spot underneath; the black colouring also extends laterally nearly to the eyes both above and below the antennæ, as well as the back of the head, in three converging stripes; there is a black spot behind each eye, and the base of the head is wholly black. Antennæ rather short, 18(?)-jointed, the joints gradually diminishing in length after the third; black, with a slight reddish shade towards the extremity. Thorax with a double yellow triangle in front; scutellum yellow, with an oblique yellow stripe running from each front edge; a large pale yellow spot on each side of the neck, adjoining a large hook-shaped spot on the sides of the thorax; and there is another on each side of the metathorax. Abdomen with a pale triangle at base; segments narrowly edged with pale yellow both above and below; sides and extremity broadly yellow below, but very narrowly above; all the legs yellow except the base of the hind coxæ. Wings hyaline, with reddish-brown stigma and nervures; basal nervures and interior of the stigma yellowish; second brachial cell with only the commencement of a cross-nervure.

*Hab.* Southern States.

a. ♀.

## Subfamily XIV. XYELINÆ.

## 109. MACROXYELA.

Allied to *Xyela*, but much larger.

Head transverse, moderately broad. Antennæ 9-jointed, the first joint much broader and twice as long as the second, the third as long as all the remainder together; the following joints much smaller and thinner, collectively about as long as the first two joints together. Wings with three marginal cells and four submarginal cells; of the three nervures which divide the latter, the first is received by the first marginal cell, and the other two by the third; the two recurrent nervures are received by the second and third submarginal cells respectively: lanceolate cell with oblique cross line: hind wings with three inner cells. Abdomen broad, rather flattened; ovipositor stout, distinctly double, projecting to a distance equal to about two thirds of the length of the abdomen; front tibiæ with two small terminal spurs; intermediate tibiæ with at least two middle, and hind tibiæ with at least three middle spurs, in addition to the two terminal spurs\*.

*Phyllæcus faunus*, *André, Spec. Hym.* i. p. 543 (1881).

*Exp.* al. 10–11 lin.. long. corp. 5–6 lin.

Black, face and abdomen shading into chestnut: two yellow dots just within the eyes on the vertex, and two more just below the antennæ; between these last are two small oblique stripes on the clypeus. Collar bordered behind with yellow: a yellow triangular spot at the base of the abdomen, and one on each side of the metathorax; a small yellow dash on the hind coxæ. Abdomen compressed: segments 3, 4, 6, 7, 8, and 9 edged with yellow belts behind; segment 2 with only a yellow dot on each side. Legs testaceous; femora blackish. Wings hyaline, with yellowish nervures. Male with the face below the antennæ reddish yellow: a spot in the middle of the clypeus, another on the labrum, and a streak below each antenna, traversing the whole face, black: abdomen cylindrical, and with a yellow dot on each side of segment 5, instead of segment 2: otherwise as in the female.

*Hab.* Europe.

 & 107 (1835).  
*Banchus viridator*, *Fabr. Syst. Piez.* p. 127, n. 5 (1804).

(*C. atripes*.) Exp. al. 6-7½ lin., long. corp. 3-4 lin.

Black; base of mandibles, pleuræ, hind coxæ, and sides of abdomen with yellow dots; abdomen with a yellow triangle at the base, segments 3 and 4 broadly, and 5 and 9 narrowly edged behind with lemon-yellow: legs testaceous: femora and hind legs (except the tibiæ beneath, which are testaceous) black. Wings hyaline, with piceous nervures: antennæ slightly thickened towards the tip.

(*C. pusillus*.) Exp. al. 5 lin., long. corp. 3 lin.

Differs in its smaller size; segments 4-6, or only 5 and 6, are belted with yellow behind broadly, and 9 narrowly; the abdominal spots are wanting; the antennæ are testaceous beneath towards the extremity, and the hind tibiæ are testaceous, except at the tips.

Although treating these forms as *C. pygmaeus*, yet I have thought it desirable to figure and briefly characterize them from original Stephensian examples.

(Plate XIV. fig. 8.)

*Cephus viator*, *Smith, Trans. Ent. Soc. Lond.* 1874, p. 385.

Exp. al. 1 poll., long. corp.  $6\frac{1}{2}$  lin.

Shining black, finely punctured and pubescent; a small yellowish spot in the middle of the vertex on each side just within each eye. Collar yellow. Abdomen with a yellow triangle at the back of the first segment; segments 3, 4, 6, and 7 bordered behind with yellow on the sides, and (except segment 2) also in the middle above. Coxæ and femora black, the former bordered in front with yellowish; anterior coxæ with minute, and hind femora with larger yellow spots; femora black; tibiæ, tarsi, and four anterior knees rufo-testaceous. Wings yellowish hyaline, nervures yellowish brown, costa rufo-testaceous.

As Smith remarks, this species is closely allied to *A. quinquefasciatus*, Steph. (*linearis*, Schrank), of which it may be a variety.

*Oryssus maculipennis*, *Smith, Journ. Linn. Soc.* iv. p. 177 (1860);  
*Westw. Thes. Ent. Ocon.* p. 119, pl. xxii. fig. 5 (1874).

Exp. al. 7 lin., long. corp. 5 lin.

“Black; the head rugose, the front coarsely so, with a row of transverse tubercles running from the vertex along the inner orbits of the eyes, and crossing the front at half their length; the cheeks with a cinereous down, and a line of silvery-white pubescence or down along the outer orbits of the eyes. Thorax closely punctured; the mesothorax with a central longitudinal smooth elevation. Wings fuscous, with a broad transverse hyaline fascia before the base of the marginal cell; the tips of the wings hyaline. The legs ferruginous, with the coxæ and trochanters black; the posterior tibiæ with a double row of serrations outside. Abdomen shining and closely punctured, the base and apex closely so.”—*Smith*.\*

*Oryssus mexicanus*, *Cress. Proc. Amer. Ent. Soc.* 1879, p. x; *id. Trans. Amer. Ent. Soc.* viii. p. 48 (1880).

*Hab.* Mexico.

---

\* The specimen figured seems to be intermediate between the type (as described by Smith, and figured by Westwood) and the variety from Mindanao described by Westwood (*l. c.* p. 120). The fore wings are brown, hyaline at the base as well as the tip, and a slightly oblique central fascia of uniform breadth runs from below the costal nervure to the inner margin. Hind wings hyaline, with the apical third brown. This species is remarkably similar to *O. amazonicus*, Westw.

10. *Oryssus sayi*.

4. *Dereyrta reedii*.

(Plate XIV. fig. 15.)

Exp. al. 6 lin., long. corp. 4 lin.

Shining black: segments 2-4 of the abdomen and the back of the first legs, and trochanters luteous; coxæ black.

The black antennæ prevent me from regarding this insect as the female of *D. flavipes*, but it is closely allied to that species.

*Hab.* Chili.

a. ♀. (Type.) Chili. E. C. Reed, Esq.

## 3. BRACHYXIPHUS.

*Brachyxiplus*, *Phil. Stett. ent. Zeit.* xxxii. p. 285 (1871).

1. *Brachyxiplus grandis*.

*Brachyxiplus grandis*, *Phil. Stett. ent. Zeit.* xxxii. p. 287, pl. iii. figs. 1, 1f (1871).

♂. *Dereyrta bicolor*, *Westw. Thes. Ent. Oxon.* p. 121, pl. xxiii. fig. 1 (1874).

*Hab.* Chili.

a. ♀. Chili. E. C. Reed, Esq.

2. *Brachyxiplus hyalinus*.

(Plate XIV. fig. 9.)

Exp. al. 1 poll., long. corp. 7 lin.

Head, thorax, the two first and the terminal segments of the abdomen black: the rest of the abdomen shining luteous. Wings yellowish hyaline, clouded towards the tips, with piceous nervures.

*Hab.* Chili.

a. ♂. (Type.) Chili. E. C. Reed, Esq.

3. *Brachyxiplus deceptus*.

(Plate XIV. figs. 16 ♀, 10 ♂.)

*Dereyrta deceptus*, *Smith, Trans. Ent. Soc. Lond.* 1876. p. 474, pl. iv. fig. 6.

♂. *Xiphidria flavipicta*, *Smith, Trans. Ent. Soc. Lond.* 1878, p. 1.

\* This specimen agrees with the figure, except that the four anterior femora are black. Philippi's figure (as observed by Prof. Westwood) seems also to represent a male. Philippi states that the male of *Brachyxiplus* was unknown to him; but this remark probably applied only to *B. grandis*.

Exp. al. 7-8 lin., long. corp. 4-5 lin.

Luteous; head and thorax darker above, especially in the male: orbits, and an extension on the vertex to the occiput, face, and a V-shaped spot between the antennæ yellow; the first or the two first joints of the antennæ rufous. Thorax with three pairs of spots on the back; cenchri and part of the scutellum yellow. Collar and a large spot beneath the wings yellow. Pectus blackish. Femora and tibiæ yellowish in the male, in which the last three segments of the abdomen shade into blackish. Wings yellowish hyaline, with piceous nervures.

Described from one male and one female, which, though placed in different genera by the late Mr. F. Smith, agree so closely in their markings that I have no doubt of their identity. On account of the short ovipositor, I place them provisionally in *Brachyviphus* rather than in *Xiphydria*.

*Hab.* New Zealand.

Exp. al. 1 poll. 3 lin., ad 1 poll. 10 lin., long. corp. 1 poll. ad 1 poll. 3 lin.

\* This species so closely resembles a *Tremex* in shape and is so similar to the descriptions of *T. magus*, that it is not surprising that Stephens should have confounded it with that species, apparently taking out his own description by those of other writers. In *T. magus*, however, the stigma and the last joint of the tarsi are yellow.

*Male.* Head and thorax black; back of head yellow, divided in the middle by a dark line; face and back of vertex reddish; antennæ reddish brown, darkest at the base, and the base of the segments annulated with paler, at least beneath. Front legs reddish brown, hind legs black, the base of the tibiæ and the first joint of the tarsi yellow; cenchri yellow. Abdomen reddish luteous above, with the tip black; the sides and under surface much paler, with the segments bordered with reddish brown, which colour spreads over more or less of the middle. Wings dusky hyaline, darker towards the tips, with yellow costa and ferruginous-brown nervures.

*Female* like the male, but the antennæ and legs are yellow, except the base of the femora, the apical half of the intermediate, and three quarters of the length of the hind tibiæ, which are black. Mesothorax reddish above, probably from abrasion. Abdomen black, the hinder half of the first segment, the second (sometimes), a narrow border on the sides of the sixth behind, the front half of the eighth and the ninth yellow; ovipositor black, sheaths yellow. Wings yellowish hyaline, with reddish nervures: apical half of the abdominal fold of the hind wings clouded.

### 21. *Sirex abbotii*.

(Plate XV. fig. 8.)

Exp. al. 1 poll. 6 lin., long. corp. 11 lin.

Head and antennæ blue-black, extremities of the first two joints of antennæ rufous below; thorax greenish; first two segments of abdomen, and half the third, and last two segments blue-black; head and prothorax very hairy, very coarsely punctured; abdomen more finely. Legs rufous, hind tibiæ and first three joints of the tarsi black. Wings yellowish hyaline; venation most anomalous:—on one side there is a projection in the nervure bounding the first marginal cell; the nervule crossing the second radial cell is incomplete; and on the hind wings the nervure bounding the first middle cell on the outside is Y-shaped; on the other side, the nervure between the first marginal and first submarginal cell is double, and a projecting nervure is thrown out from above into the second and third submarginal cells; the second brachial cell has an incomplete cross nervule. Hind tibiæ and first joint of tarsi much inflated.

### 32. *Sirex bizonatus*.

*Urocerus flavicornis*, *Nort. (nec Fabr.) Trans. Amer. Ent. Soc.* ii. p. 362 (1869).

*Sirex bizonatus*, *Steph. Ill. Brit. Ent., Mand.* vii. p. 114, pl. xxxvi. fig. 2 (1835).

Exp. al. 1 poll. 5-8 lin., long. corp. 1 poll. ad 1 poll. 2 lin.

Perhaps a variety of the last, but smaller and more slender, and appears to be constant in coloration. Differs in the paler hind legs, which are brown only at the tips of the tibiæ above and at the claws, and in the colour of the abdomen, which is black above, with the second segment, a narrow border to the first, the seventh, and more or less of the front half of the eighth, luteous above.

Stephens has well figured the female of this species or variety; and as it is a well-known insect, I have thought it sufficient to give a comparative description here.

(Plate XV. fig. 1.)

*Tremex smithii*, *Cameron, Trans. Ent. Soc. Lond.* 1876, p. 470.

Exp. al. 1 poll. 3 lin., long. corp. 1 poll.

Blue-black; face hairy, head and thorax very closely punctured. First and second segments of the abdomen bordered behind with testaceous yellow, the second very narrowly; the third and fourth slightly, and the fifth and sixth more distinctly, at the sides only. The first six segments of the abdomen have a strong purplish lustre; the remainder are dull, coarsely punctured, and clothed with short grey hairs. Terebra, and base of hind tibiæ and of first hind tarsus, testaceous yellow. Wings purplish hyaline, with picuous nervures; second brachial cell in the fore wings, and the middle of the hind wings, hyaline.

A male specimen from the same collection, which may possibly belong to this species, is larger (exp. al. 1 poll. 11 lin., long. corp. 1 poll. 1 lin.), with no pale markings on the abdomen or legs, and the abdomen is slightly tinged with chestnut-colour, and finely punctured.

Read:— *Macrophya mocsaryi*.

*Macrophya lineata*, *Moes.* (nec *Nort.*).

Page 268. *Macrophya vexator*.

Vide *Harpiphorus vexator*, antè. p. 205.

Page 280. Add a species:—

6. *Perineura bimaculosa*.

*Synairema bimaculosa*, *Marq. Bull. Soc. Toulouse*, xiii. p. 137 (1879).

*Hab.* France.

Page 282. *Tenthredopsis alpina*, *Thoms.*

*T. lividiventris*, *Cam.*, appears to be a distinct species.

Page 284. *Tenthredopsis flavomaculata*.

Omit the entry

a. ♀. Britain. J. F. Stephens.

as the specimen proves, on comparison with types, to belong to *T. nigronotata*.

Page 284. *Tenthredopsis nigronotata*.

.Add:—

d. ♀ Britain. J. F. Stephens.

Page 284. Add the following species :—

21 a. *Tenthredopsis* (?) *latecincta*.

*Allantus latecinctus*, *Brullé, Expéd. Scient. de Morée*, iii. (1) pt. 2, p. 393, pl. lii. fig. 12 (1832).

*Hab.* Greece.

Page 293. Add the following species :—

39 a. *Tenthredo* (?) *leucomelas*.

*Tenthredo leucomelas*, *Ström, Norsk Vidensk. Selsk. Skrifter*, iv. p. 347 (1768).

*Hab.* Norway.

Add :— Page 296. *Tenthredo maculata*.

? *Tenthredo amoena*, *Marq. Bull. Soc. Toulouse*, xiii. p. 139 (1879).

Add :— Page 296. *Tenthredo flava*.

*Tenthredo flava*, *Poda, Mus. Græc.* p. 103, n. 5 (1761).

Page 296. No. 55.

Read :— *Tenthredo mocsaryi*.

*Tenthredo mocsaryi*, *André, Spec. Hym.* i. p. 598 (1882).

*Tenthredo menetriesii*, *Kirb.* (= *fallax*, *Mocs.*, nec *Smith*).

Page 297. No. 56.

Read :— *Tenthredo vespiformis*.

*Tenthredo vespiformis*, *Schrank, Enum. Ins. Austr.* p. 329, n. 662 (1781).

*Tenthredo pallicornis*, *Fabr.* (1798).

*Tenthredo vespoides*, *St.-Farg. Mon. Tenth.* p. 73, n. 220 (1823);  
*id. Faun. Franç.* p. 18, n. 4, pl. iii. fig. 2.

Page 297. Add the following species :—

58 a. *Tenthredo dubia*.

*Tenthredo dubia*, *Ström, Norsk Vidensk. Selsk. Skrifter*, iv. p. 347 (1768).

*Hab.* Norway.

Add :— Page 301. *Tenthredo conspicua*.

? *Tenthredo scapularis*, *St.-Farg. Enc. Méth.* x. p. 569 (1825).

Page 301. Add two species :—

85 a. *Tenthredo* (?) *carbonaria*.

*Tenthredo carbonaria*, *Linn. Syst. Nat.* i. pt. 2, p. 37 (1768).

*Hab.* Europe.

85 b. *Tenthredo* (?) *bimaculata*.

*Allantus bimaculatus*, *Gimm. Bull. Mosc.* ix. p. 431 (1836).

*Hab.* Livonia.

Page 331. Add a species :—

26 a. *Megalodontes lamellatus*.

*Tarpa lamellata*, *André, Annales de la Soc. Ent. de France*, (6) i. p. 442 (1882).

*Hab.* Tashkend.

Page 332, line 9 from bottom.

Erase the reference to *Tenthredo flaviceps*, Retz.

Page 339. No. 38.

Read :—

***Pamphilius hypocinctus*.**

*Lyda semicincta*, *Zadd. (nec Nort.)*.

Page 343. Add a species :—

59 a. *Pamphilius iridescens*.

*Lyda iridescens*, *André, Annales de la Soc. Ent. de France*, (6) i. p. 443 (1882).

*Hab.* East Siberia.

Page 364. No. 54.

Read :—

***Cephus cressonii*.**

*Cephus abdominalis*, *Cress. (nec Latr.)*.

## LIST OF PLATES.

### PLATE I.

- Fig. 1. *Cnidus sibiricus*, ♀, Siberia, p. 4.  
 2. *Cnidus americana*, ♂, Georgia, p. 5.  
 3. *Cnidus arctica*, ♀, North India, p. 4.  
 4. *Cnidus hudsonica*, ♀, Hudson's Bay, p. 8.  
 5. *Trichosoma crassum*, ♂, Newfoundland, p. 11.  
 6. *Perga cincticornis*, ♀, New South Wales, p. 20.  
 7. *Trichosoma arcticum*, ♂, Mackenzie River, p. 10.  
 8. *Trichosoma scotica*, ♀, England, p. 9.  
 9. *Amasis sublytta*, ♂, Argentine Republic, p. 17.  
 10. *Abia imperialis*, ♂, North China, p. 15.  
 11. *Perga dorsalis*, ♂, Australia, p. 18.  
 12. *Perga dorsalis*, ♀.  
     *a.* Front view of head; *b.* Inner mouth-parts.  
 13. *Perga affinis*, ♂, South Australia, p. 19.  
 14. *Perga affinis*, ♀.

### PLATE II.

- Fig. 1. *Perga polita*, ♀, Australia, p. 21.  
 2. *Perga kirbyi*, ♀, Swan River, p. 21.  
 3. *Perga haliata*, ♀, South Australia, p. 27.  
 4. *Perga bisecta*, ♀, N.W. Australia, p. 23.  
 5. *Perga glabra*, ♀, Sydney, p. 23.  
 6. *Perga ferruginea*, ♀, Australia, p. 24.  
 7. *Perga univittata*, ♀, Australia, p. 25.

- Fig. 8. *Perga latreillii*, ♂, South Australia, p. 25.  
 9. *Perga dubia*, ♂, Swan River, p. 27.  
 10. *Perga amenaida*, ♂, Adelaide, p. 28.  
 11. *Perga leachii*, ♀, Victoria, p. 30.  
 12. *Perga rufomaculata*, ♀, Adelaide, p. 29.  
 13. *Perga dentata*, ♀, Adelaide, p. 29.  
 14. *Perga jucunda*, ♀, West Australia, p. 30.  
 15. *Cerealces scutellata*, ♂, South Australia, p. 31.  
     *a.* Antenna; *b.* Hind leg.  
 16. *Incalia hirticornis*, ♀, Amazons, p. 32.  
     *a.* Antenna; *b.* Hind leg.  
 17. *Paralypia picipes*, ♀, Amazons, p. 33.  
     *a.* Antenna.

## PLATE III.

- Fig. 1. *Trichorhachus nitidus*, ♂, Swan River, p. 39.  
     *a.* Head; *b.* Hind leg.  
 2. *Trichorhachus nitidus*, ♀.  
 3. *Trichorhachus sobrinus*, ♂, Australia (?), p. 39.  
 4. *Trichorhachus hyalinus*, ♂, Swan River, p. 39.  
 5. *Trichorhachus abdominalis*, ♂, Swan River, p. 40.  
 6. *Scobina bicolor*, ♀, Amazons, p. 41.  
 7. *Schizocerus plumiger*, ♂, Georgia, p. 37.  
 8. *Schizocerus plumiger*, ♀.  
 9. *Gymnia inconspicua*, ♂, Amazons, p. 42.  
 10. *Gymnia inconspicua*, ♀.  
 11. *Ptilia basipunctata*, ♀, Mexico, p. 46.  
 12. *Ptilia bicolor*, ♀, Tapajos, p. 46.  
 13. *Ptilia pumilio*, ♀, Amazons, p. 47.  
 14. *Ptilia soror*, ♀, Amazons, p. 48.  
 15. *Hemidianeura scapularis*, ♂, Mexico, p. 49.  
 16. *Hemidianeura nigricornis*, ♀, Amazons, p. 49.  
     *a.* Antenna.  
 17. *Gymnia mexicana*, ♀, Mexico, p. 43.  
 18. *Athermantus imperialis*, ♀, North China, p. 54.  
     *a.* Hind leg.

## PLATE IV.

- Fig. 1. *Dielocerus ellisii*, ♀, Brazil, p. 50.  
 2. *Ptenus serratus*, ♂, Catagallo, p. 51.  
 3. *Ptenus serratus*, ♀.  
 4. *Ptenus diversipes*, ♀, Amazons, p. 52.  
 5. *Ptenus violaceus*, ♀, Brazil, p. 52.  
 6. *Ptenus consors*, ♀, Brazil, p. 52.  
 7. *Hylotoma andromeda*, ♀, Natal, p. 74.  
 8. *Ptenus atriceps*, ♀, Brazil (?), p. 53.  
 9. *Hylotoma gambiæ*, ♂, Gambia, p. 75.  
 10. *Hylotoma urania*, ♀, Natal, p. 75.  
 11. *Hylotoma jonasi*, ♀, Japan, p. 61.  
 12. *Hylotoma albocincta*, ♀, India, p. 71.  
 13. *Hylotoma similis*, ♀, Japan, p. 61.  
 14. *Hylotoma captiva*, ♀, Japan, p. 62.  
 15. *Hylotoma dirce*, ♀, Lako Ngami, p. 74.  
 16. *Hylotoma rejecta*, ♀, Japan, p. 62.  
 17. *Hylotoma flavicollis*, ♀, China, p. 63.  
 18. *Hylotoma simillima*, ♀, Japan, p. 62.

## PLATE V.

- Fig. 1. *Hylotoma xanthogaster*, ♀, North India, p. 72.  
 2. *Hylotoma sinensis*, ♂, China, p. 72.  
 3. *Hylotoma bipunctata*, ♀, India, p. 73.  
 4. *Hylotoma lutea*, ♂, North India, p. 73.  
 5. *Hylotoma victorina*, ♂, China, p. 73.  
 6. *Hylotoma lutea*, ♀.  
 7. *Hylotoma disparilis*, ♂, Japan, p. 63.  
 8. *Hylotoma victorina*, ♀.  
 9. *Hylotoma disparilis*, ♀.  
 10. *Hylotoma dubia*, ♀, Japan, p. 64.  
 11. *Hylotoma eximia*, ♀, Mexico, p. 65.  
 12. *Hylotoma quadripunctata*, ♀, Japan, p. 65.

- Fig. 13. *Hylotoma analis*, ♂, Georgia, p. 65.  
 14. *Hylotoma clavicornis*, ♀, North America, p. 65.  
 15. *Hylotoma nigrinodosa*, ♀, Japan, p. 64.  
 16. *Hylotoma borealis*, ♀, Hudson's Bay, p. 66.  
 17. *Hylotoma abdominalis*, ♀, Georgia, p. 67.  
 18. *Hylotoma cyra*, ♀, Georgia (?), p. 66.  
 19. *Hylotoma coccinea*, ♀ (♂ on Plate), Georgia, p. 68.  
 20. *Hylotoma sphinx*, ♂, North America (?), p. 68.  
 21. *Hylotoma coccinea*, ♀, var.

## PLATE VI.

- Fig. 1. *Hylotoma xanthothorax*, ♀, North America (?), p. 69.  
 2. *Hylotoma vittata*, ♀, Mexico, p. 70.  
 3. *Hylotoma dryope*, ♀, Amazons, p. 78.  
 4. *Loboceras mexicanum*, ♀, Mexico, p. 80.  
 5. *Loboceras lucidum*, ♀, Amazons, p. 80.  
 6. *Loboceras hippolyte*, ♀, Amazons, p. 80.  
 7. *Perantherix fatima*, ♂, Amazons, p. 79.  
     *a.* Antenna; *b.* Hind leg.  
 8. *Lophyrus americanus*, ♀, Georgia, p. 88.  
 9. *Pterygophorus leachii*, ♀, Queensland, p. 82.  
 10. *Pterygophorus cygnus*, ♂, Swan River, p. 81.  
 11. *Lophyrus fabricii*, ♀, Georgia, p. 86.  
 12. *Lophyrus abbotii*, ♀, Georgia, p. 87.  
 13. *Perreyia compta*, ♂, Mexico, p. 90.  
 14. *Perreyia* (?) *anomala*, ♀, Mexico, p. 90.  
 15. *Perreyia compta*, ♀.  
 16. *Camptoprium humerale*, ♂, Amazons, p. 92.  
     *a.* Antenna; *b.* Hind leg.  
 17. *Perreyia amazonica*, ♀, Amazons, p. 91.  
     *a.* Antenna.  
 18. *Camptoprium* (?) *nigriceps*, ♂, Mexico, p. 62.  
     *a.* Antenna; *b.* Hind leg.

## PLATE VII.

- Fig. 1. *Acherdocerus fumipennis*, ♀, Mexico, p. 93.  
 a. Antenna.
2. *Decameria testacea*, ♂, Amazons, p. 93.  
 a. Antenna.
3. *Polyclonus atratus*, ♂, Australia, p. 97.  
 a. Antenna.
4. *Eurys nitidus*, ♀, Australia, p. 95.  
 a. Antenna.<sup>3</sup>
5. *Euryopsis nitens*, ♂, South Australia, p. 95.  
 a. Antenna.
6. *Ancyloneura varipes*, ♀, Aru, p. 96.
7. *Ancyloneura nigripes*, ♀, New Guinea, p. 95.
8. *Cladomacra macropus*, ♂, Celebes &c., p. 96.  
 a. Antenna.
9. *Nematus flavescens*, ♀, England, p. 125.
10. *Nematus palliditarsus*, ♂ (*gelidus*), p. 115.
11. *Nematus calais*, ♀, Mackenzie River, p. 144.
12. *Nematus inconspicuus*, ♀, New York, p. 141.
13. *Nematus alienatus*, ♀, England, p. 133.
14. *Nematus extraneus*, ♀, Hudson's Bay, p. 142.
15. *Nematus neglectus*, ♂, Hudson's Bay, p. 147.
16. *Nematus castaneus*, ♀, Hudson's Bay, p. 147.
17. *Nematus trifurcatus*, ♀, Hudson's Bay, p. 148.
18. *Monophadnus scutellatus*, ♀, Mexico, p. 177.

## PLATE VIII.

- Fig. 1. *Blennocampa obscura*, ♂, Amazons, p. 163.
2. *Xenapates africanus*, ♂, Sierra Leone, p. 180.  
 a. Antenna.
3. *Monostegia antipoda*, ♀, New Zealand, p. 186.
4. *Monophadnus lewisii*, ♀, Japan, p. 174.
5. *Monophadnus japonicus*, ♀, Japan, p. 174.
6. *Monophadnus rufus*, ♀, China, p. 174.

- Fig. 7. *Monophadnus hudsonicus*, ♂, Hudson's Bay, p. 176.  
 8. *Monophadnus carulescens*, ♂, Nepal, p. 178.  
 9. *Monophadnus lineatus*, ♀, Hudson's Bay, p. 177.  
 10. *Monophadnus erebus*, ♀, Tropical America, p. 178.  
 11. *Monophadnus punctatus*, ♀, Pará, p. 179.  
 12. *Monophadnus amazonicus*, ♀ (*thoracicus*), Amazon  
 p. 178.  
 13. *Monophadnus paranus*, ♂, Pará, p. 179.  
 14. *Monophadnus batesii*, ♀, Amazons, p. 179.  
 15. *Selandria dorsalis*, ♂, Europe, p. 187.  
 16. *Selandria attenuata*, ♂, Amazons, p. 191.  
 17. *Eriocampa bengalensis*, ♀, Bengal, p. 185.  
 18. *Hoplocampa* (?) *atriceps*, ♂, Georgia, p. 168.  
 19. *Senoclia purpurata*, ♀, Celebes &c., p. 181.  
 20. *Senoclia cærulea*, ♂, Ceylon, p. 181.  
 a. Antenna.  
 21. *Senoclia cærulea*, ♀.  
 22. *Selandria diversipes*, ♀, Mexico, p. 189.  
 23. *Selandria glabra*, ♂, Mexico, p. 190.  
 24. *Selandria inconspicua*, ♀, Mexico, p. 190.

## PLATE IX.

- Fig. 1. *Selandria batesii*, ♂, Amazons, p. 191.  
 2. *Selandria batesii*, ♀.  
 3. *Selandria tripunctata*, ♀, Amazons, p. 190.  
 4. *Harpiphorus vexator*, ♀, Japan, p. 205.  
 5. *Emphytus fuscipennis*, ♀, Japan, p. 203.  
 6. *Emphytus nigrocæruleus*, ♀, Japan, p. 203.  
 7. *Dolerus japonicus*, ♀, Japan, p. 228.  
 8. *Strongylogaster iridipennis*, ♂, Japan, p. 213.  
 9. *Dolerus rufocinctus*, ♀, North India, p. 233.  
 10. *Dolerus ephippiatus*, ♀, Japan, p. 229.  
 11. *Dolerus cameroni*, ♀, China, p. 229.  
 12. *Dolerus affinis*, ♀, China, p. 230.  
 13. *Dolerus subfasciatus*, ♀, Japan, p. 229.

- Fig. 14. *Athalia proxima*, ♀, India, p. 235.  
 15. *Siobla incerta*, ♂, Burmah, p. 252.  
 16. *Siobla ruficornis*, ♂, Japan, p. 250.  
 17. *Siobla pacifica*, ♀, Japan, p. 251.  
 18. *Siobla ruficornis*, ♀.  
 19. *Allantus trochanteratus*, ♂, North India, p. 249.  
 20. *Siobla ferox*, ♂, Japan, p. 252.  
     a. Antenna.  
 21. *Siobla robusta*, ♀, Georgia, p. 253.  
     a. Antenna.  
 22. *Siobla flavipes*, ♀, Japan, p. 251.

## PLATE X.

- Fig. 1. *Macrophya hartigii*, ♂, Albania, p. 260.  
 2. *Macrophya lucasii*, ♂, Algeria, p. 265.  
 3. *Macrophya corynetes*, ♀, Algeria, p. 264.  
 4. *Macrophya ignava*, ♀, Japan, p. 266.  
 5. *Macrophya jugurtha*, ♂ (*coynata*), Algeria, p. 265.  
 6. *Macrophya carbonaria*, ♀, Japan, p. 267.  
 7. *Macrophya timida*, ♀, Japan, p. 267.  
 8. *Macrophya luctifera*, ♀, Japan, p. 267.  
 9. *Macrophya apicalis*, ♀, Japan, p. 268.  
 10. *Macrophya flavomaculata*, ♀, China, p. 268.  
 11. *Tenthredopsis irritans*, ♂, Japan, p. 285.  
 12. *Macrophya nigropicta*, ♀, Japan, p. 269.  
 13. *Macrophya cassandra*, ♀, United States, p. 273.  
 14. *Macrophya abbotii*, ♀, Georgia, p. 269.  
 15. *Macrophya zoe*, ♀, Hudson's Bay, p. 270.  
 16. *Pachyprotasis erratica*, ♂, Japan, p. 278.  
 17. *Pachyprotasis volatilis*, ♀, Japan, p. 278.  
 18. *Macrophya albifacies*, ♀, New York, p. 271.  
 19. *Macrophya pulcherrima*, ♂, Florida, p. 275.  
 20. *Pachyprotasis versicolor*, ♀, North India, p. 279.  
 21. *Belcses stigmatalis*, ♀, China, p. 255.  
     a. Antenna.  
 22. *Allomorpha incisa*, ♀, China, p. 254.  
     a. Antenna.

## PLATE XI.

- Fig. 1. *Tenthredopsis nigropectus*, ♂, Japan, p. 285.  
 2. *Tenthredo fentoni*, ♀, Japan, p. 304.  
 3. *Tenthredo cburneifrons*, ♀, Amoor, p. 306.  
 4. *Tenthredo xanthotarsis*, ♀, Japan, p. 304.  
 5. *Tenthredo varipes*, ♀, Japan, p. 305.  
 6. *Tenthredo providens*, ♀, Japan, p. 304.  
 7. *Tenthredo hilaris*, ♀, Japan, p. 305.  
 8. *Tenthredo adusta*, ♀, Japan, p. 303.  
 9. *Tenthredo smithii*, ♀, India, p. 320.  
 10. *Tenthredo melanotarsis*, ♀, China &c., p. 321.  
 11. *Tenthredo fortunii*, ♀, China, p. 307.  
 12. *Tenthredo xanthopus*, ♀, Japan (?), p. 305.  
 13. *Tenthredo xanthoptera*, ♀, North India, p. 322.  
 14. *Tenthredo uniformis*, ♀, Hudson's Bay, p. 317.  
 15. *Tenthredo latifasciata*, ♀, India, p. 321.  
 16. *Tenthredo amurensis*, ♀, Amoor, p. 306.  
 17. *Tenthredo flavobalteata*, ♀, China, p. 307.  
 18. *Tenthredo indica*, ♂, North India, p. 321.  
 19. *Tenthredo trimaculata*, ♂, China, p. 307.

## PLATE XII.

- Fig. 1. *Tenthredo antennata*, ♀, Nova Scotia, p. 308.  
 2. *Tenthredo thora*, ♀, Hudson's Bay, p. 310.  
 3. *Tenthredo nigricollis*, ♀, Newfoundland, p. 308.  
 4. *Tenthredo subrufescens*, ♀, Hudson's Bay, p. 311.  
 5. *Tenthredo clypeata*, ♀, North India, p. 322.  
 6. *Tenthredo zetes*, ♂, Hudson's Bay, p. 312.  
 7. *Tenthredo vapida*, ♀, Hudson's Bay, p. 315.  
 8. *Tenthredo delicatula*, ♂, Venezuela, p. 323.  
 9. *Tenthredo barnstonii*, ♀, Hudson's Bay, p. 314  
 10. *Tenthredo barnstonii*, ♂.  
 11. *Tenthredo coccinoceras*, ♀, Darjiling, p. 323.  
     a. Antenna.  
 12. *Tenthredo cressonii*, ♀, Nova Scotia &c., p. 315.  
 13. *Tenthredo borealis*, ♀, Hudson's Bay, p. 318.

- Fig. 14. *Tenthredo vittata*, ♀, Hudson's Bay, p. 319.  
 15. *Tenthredo hudsoni*, ♀, Hudson's Bay, p. 318.  
 16. *Tenthredo aperta*, ♀, Mexico, p. 320.  
 17. *Tenthredo castanea*, ♀, Hudson's Bay, p. 319.  
 18. *Sirex flavicornis*, ♀, Labrador, p. 380.

## PLATE XIII.

- Fig. 1. *Dipteromorphus rotundiventris*, ♂, Masuri, p. 324.  
 a. Antenna.  
 2. *Hypolæpus abbotii*, ♀, Georgia, p. 325.  
 3. *Aglaostigma eburneiguttatum*, ♀, Siberia, p. 325.  
 a. Antenna.  
 4. *Waldheimia batesii*, ♀, Amazons, p. 327.  
 5. *Megalodontes fabricii*, ♀, Europe, p. 329.  
 6. *Pamphilus sylvarum*, ♀, England, p. 336.  
 7. *Pamphilus flavifrons*, ♂, Amoor, p. 341.  
 8. *Pamphilus rileyi*, ♀, Georgia (?), p. 350.  
 9. *Pamphilus flagellicornis*, ♀, North China, p. 341.  
 10. *Pamphilus mathematicus*, ♂, Nova Scotia, p. 348.  
 11. *Pamphilus venustus*, ♀, Japan, p. 342.  
 12. *Pamphilus sulphureipes*, ♂, Amoor, p. 343.  
 13. *Pamphilus volatilis*, ♀, Japan, p. 342.  
 14. *Pamphilus smithii*, ♀, Japan, p. 343.

## PLATE XIV.

- Fig. 1. *Macroxyela ferruginea*, ♀, North America, p. 351.  
 2. *Cephus mocsaryi*, ♀, Hungary, p. 356.  
 3. *Cephus phthiscus*, ♂, England, p. 360.  
 4. *Cephus agilis*, ♂, Japan, p. 362.  
 5. *Cephus pygmaeus*, ♀ (*atripes*), England, p. 357.  
 6. *Cephus pygmaeus*, ♂ (*pusillus*).  
 7. *Cephus linearis*, ♀, England, p. 357.  
 8. *Cephus viator*, ♀, Japan, p. 362.  
 9. *Brachycephus hyalinus*, ♂, Chili, p. 369.  
 10. *Brachycephus deceptus*, ♂, Chili, p. 369.  
 11. *Oryssus maculipennis*, ♀, Aru, p. 366.

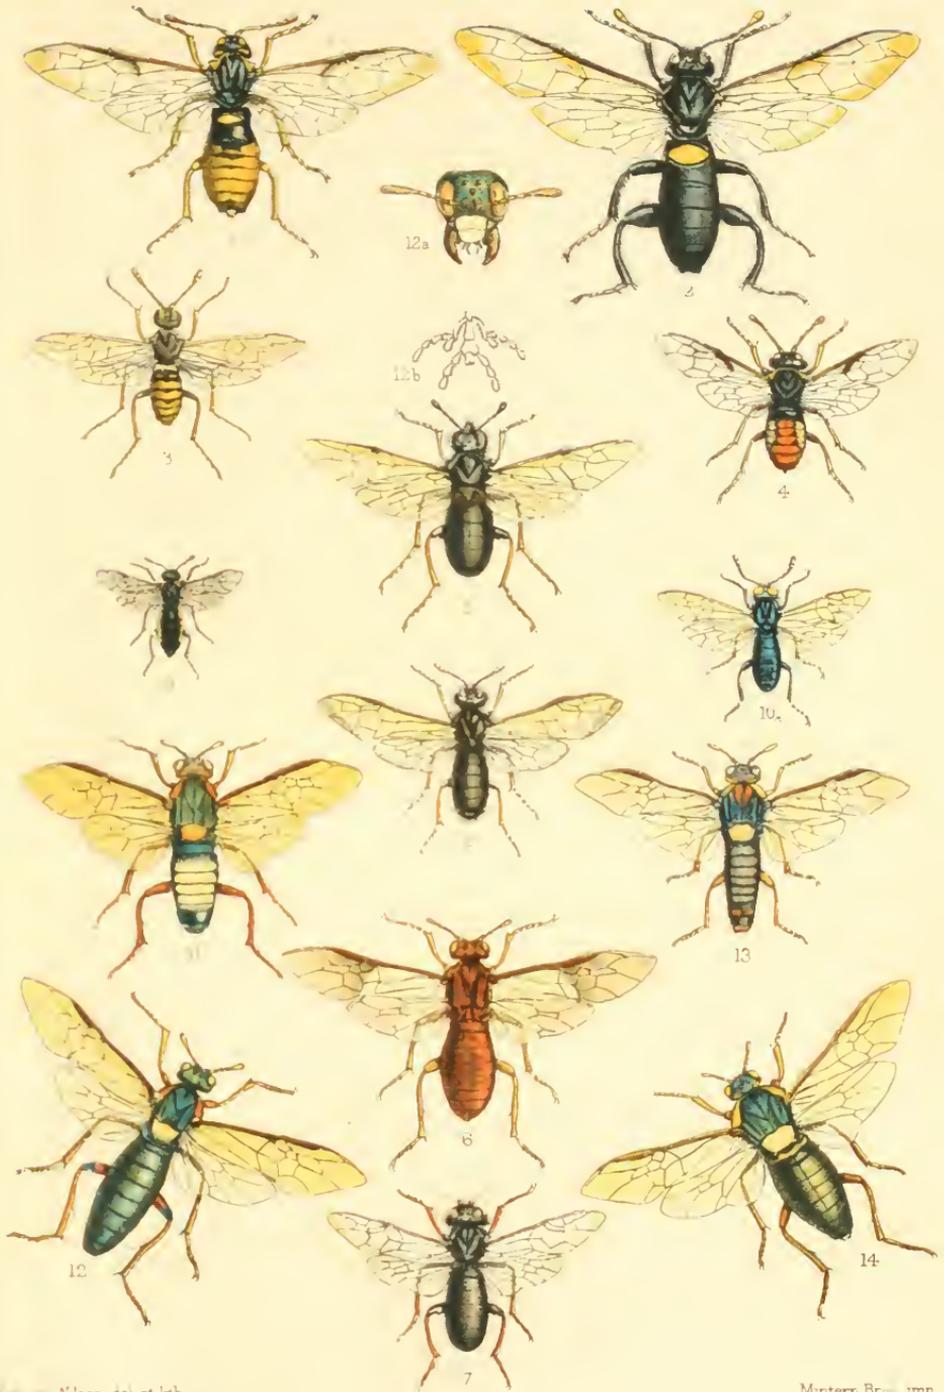

- Fig. 12. *Oryssus batesianus*, ♀, Ega, p. 367.  
 13. *Derecyrtia pictipennis*, ♀, Ega, p. 368.  
 14. *Xiphodria walshi*, ♂, New York, p. 371.  
 15. *Derecyrtia reedii*, ♀, Chili, p. 369.  
 16. *Brachyxyphus deceptus*, ♀, Chili, p. 369.

## PLATE XV.

- Fig. 1. *Tremex smithii*, ♀, East Indies, p. 385.  
 2. *Sirex cedrorum*, ♂, Lebanon, p. 375.  
 3. *Sirex cedrorum*, ♀.  
 4. *Sirex japonicus*, ♀, Japan, p. 376.  
 5. *Sirex imperialis*, ♀, India, p. 383.  
 6. *Sirex hirsutus*, ♂, Georgia (?), p. 380.  
 7. *Sirex xanthus*, ♀, India, p. 383.  
 8. *Sirex abbottii*, ♂, Georgia, p. 378.  
 9. *Sirex varipes*, ♀, British Columbia, p. 377.  
 10. *Sirex flavipennis*, ♀, Vancouver's Island, p. 380.  
 11. *Sirex apicalis*, ♂, Vancouver's Island, p. 377.  
 12. *Sirex australis*, ♀, Australia, p. 383.

## PLATE XVI.

- Fig. 1. *Cimbex japonica*, ♀, Japan, p. 4.  
 2. *Cimbex americana*, ♀, Georgia, p. 5.  
 3. *Cimbex sibirica*, ♂, Siberia, p. 387.  
 4. *Abia brevicornis*, ♀, Europe, p. 14.  
 5. *Tenthredo fuschii*, ♀, Siberia, p. 302.  
 6. *Sirex stephensii*, ♀, England, p. 375.  
 7. *Macrophya blanda*, ♀, England, p. 256.  
 8. *Tenthredopsis fulviceps*, ♀, England, p. 282.  
 9. *Tenthredopsis fulviceps*, ♂.  
 10. *Tenthredopsis tristis*, ♂, England, p. 282.  
 11. *Tenthredopsis tristis*, ♀.  
 12. *Tenthredopsis neglecta*, ♀, England, p. 284.  
 13. *Tenthredopsis neglecta*, ♂.  
 14. *Tenthredo caliginosa*, ♀, England, p. 289.
